Use A Flashlight About the House

KEEP a WINCHESTER Flashlight in the kitchen to flash into the pantry shelves, the oven or the ice-box. Have it ready to light the way to the cellar, or down the back-door steps.

Always have a WINCHESTER Flashlight in the bedroom. Use it in the clothes closet—keep it beside the bed at night.

Come in and see these Flashlights which we recommend so highly.

Carriers Wanted—

Two paper routes are now open—bonus given for continued service. Apply at Courier office. 22

The Security Benefit Picnic—

Will be held Friday afternoon and evening at the park if the weather is favorable. All members are asked to bring their families and well filled baskets, and enjoy a real good time. 23

Current Turned Off—

Owing to heavy blasting of stumps and rocks on irrigation ditches, which follow along the electric power lines the current may be off each day between the hours of 12 and 1 and 5 and 6 o'clock for some time. Turning off the current is necessary on account of blasts breaking down the electric wires.

Machinery is Arriving—

Two carloads of machinery arrived yesterday for the Shattuck Construction company for use on the contract for the dam and main canal. The machinery yesterday was mostly equipment for the new camp at Savage Rapids where it is planned to keep 100 men. It is now thought that the camp will be put in use next Saturday when 50 men will be

sent there. Six more cars of machinery are expected to arrive within the next few days.

THE CAMSHAFT AND CRANK-SHAFT

The Camshaft used in MACK truck is a special alloy steel forging, hardened and accurately ground. The cams and spiral gear for driving the oil pump are integral with the camshaft. The shaft is unusually large, very rigid and runs in three bronze bearings. The cams operate hollow valve lifters. By using lifters with rollers mounted on glass-hard pins, and properly guided there is no measurable wear resulting after a test of 12,000 miles. The cams and bearing surfaces are heat-treated and case-hardened.

Like the camshaft, the crankshaft is cut from a drop forging of special analysis steel, the bearings hardened and ground. The crankshaft has its main journals and crank-pins case-hardened. Many engine makers use small crankshafts and heat treat them for strength. The MACK's massive shaft is stronger than could be necessary without heat treatment. In addition it is very stiff. It is stiffness that is most desired in a crankshaft. The MACK crankshaft will not whip.

The MACK is the only truck having a case-hardened crankshaft and camshaft.
