Weather for the Week

Pacific Coast States: Generally fair in California; unsettled and rain in Washington and Oregon; normal temperatures.

Tonight and Sunday fair.

VOTING FOR MEN AND MEASURES

The problem of voting is largely solved by the matter of political principle. If a man is a republican he supports the candidate of that party for the presidential or the senatorial offices that republican policies may be made effective. It is impossible to quibble over these questions, and principle says a republican should support his vote for Harding by a vote for Stanfield. Chamberlain is entitled only to the vote of the democrats who vote for Cox, and a man can not class as a repub-

SCHOOL BOARD OFFERS 25 CENTS PER NAME

The clerk of School District No. 7 of Josephine County, Oregon will pay twenty-five cents each for the name of each and every child between the ages of four and twenty inclusive residing within the boundaries of said district and who have not already been enumerated in the census on file in the office of said clerk. Each name must be legibly written on a sheet of paper accompanied by the age, sex, name of father and mother and street address of the said child. This information must be signed by the parent or parents of the child whose name is sought to be enumerated.

EDWARD S. VAN DYKE, Clerk.

Office over First National Bank.

Products of Iceland.

Iceland is the source of the agate and chalcedony which are made into jewelry for bearings in watches and electrical instruments.

ELECT STANFIELD

To the Voters of Josephine County:

The election of Senator Warren G. Harding as President of the United States on November 2nd, seems assured. We believe this is conceded by all unbiased forecasts. The State of Oregon, by a large majority, will support his election.

If we elect a republican President, we should give him a delegation in Congress composed of men whose political affiliation and principles are in sympathy with the Administration. The future peace, safety and prosperity of the Country depends upon our President and the men whom we elect to the Senate and House of Representatives. It is inconsistent for us to elect a Republican President and at the same time elect a Democratic Senator.

We have full faith and confidence in the ability of Mr. Harding to meet fairly and impartially, without fear or favor, the great problems of the future; but to successfully accomplish the objects and purposes of the Republican party and to give the President unqualified support, we should elect a republican to the United States Senate.

The republican nominee, Robert N. Stanfield, is representative of the fundamental principles of the Republican party. His election is earnestly desired by Mr. Harding. Stanfield is not a Politician. He is a "made in Oregon" product. He is an able man of high moral courage, broad vision and business foresight. He knows our needs and will untiringly work for the interests of the State of Oregon. We earnestly recommend him to the people of Josephine County as the man properly fitted and qualified to represent the interests of Oregon in the Senate of the United States.

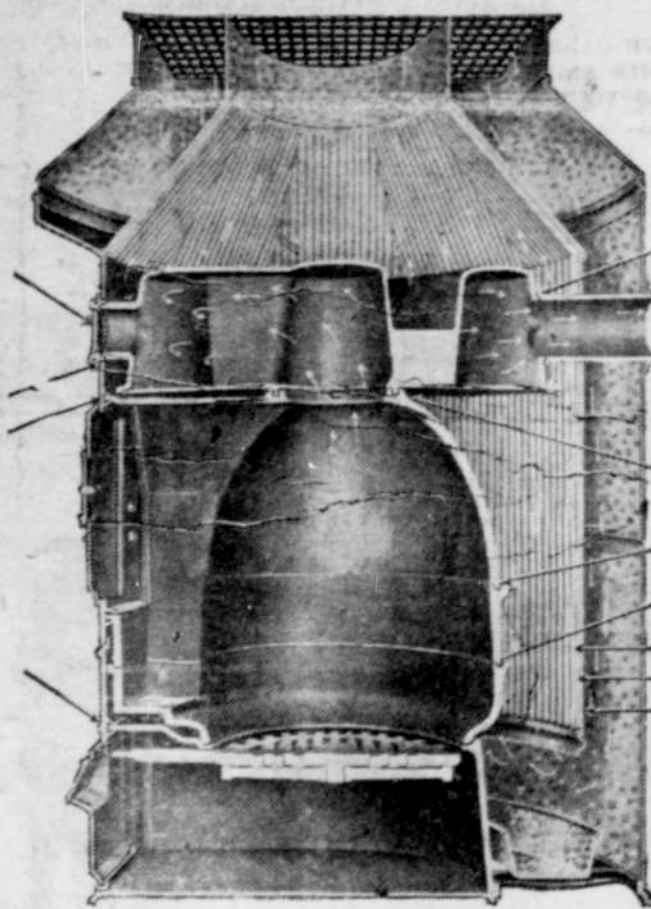

SUPPORT A REPUBLICAN PRESIDENT BY THE ELECTION OF A REPUBLICAN SENATOR.

Western Made for Western Fuel

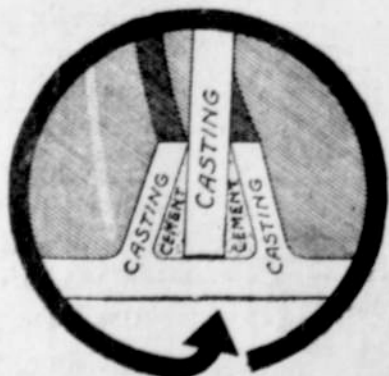

WHY A HARD COAL FURNACE SHOULD NOT BE USED FOR WESTERN FUEL.

The hard coal furnace, and all eastern furnaces are hard coal furnaces, are built primarily for hard coal. When these furnaces are to be used in the West where soft coal is used as a fuel no change whatsoever is made in the construction, except in the grate, where a soft coal grate is usually substituted.

When soft coal is used puff-outs or miniature explosions will occasionally occur. If a furnace is not built with this in mind, joints will be opened and the furnace will soon be throwing dust and gas into the room. This explains why furnaces are so very much more dusty here in the West than they are in the East.

In the construction of the Western Pipeless the fact that the furnace was to be used for soft coal and wood was the

paramount consideration. First, the doors were so arranged that they would blow open if an explosion should occur. The doors on the hard coal furnace lock when they are closed, but the doors of the Western act as a safety valve and protect all joints against excessive strain. Second, in order to make the furnace absolutely dustless all joints were made wedge sealed.

THE WEDGE SEALED JOINT

This joint absolutely eliminates all leakage of dust and gas. Each joint is made with a wedge shaped groove as shown in the cut. This groove is filled with asbestos cement and forced into place. When the cement hardens no explosion or jar of any kind can drive this cement out. It is permanently gas-tight joint.
