Pacific Coast States: Gen-
erally fair and normal tempera-
ture.

Generally cloudy tonight and
Thursday.

Today's temperature 86.
Water at bathhouse 71.

INDUSTRIES ARE WANTED

There is a need for all year in-
dustries in Josephine county. Dur-
ing the summer months are are hun-
dreds of men employed in the woods
getting out logs and sawing them
into lumber. Men are needed in the
farming and fruit growing industries
but when winter comes these men
must live on what they saved during
the summer between the times they
can get work, for work is uncertain
during the winter months. The
Chamber of Commerce is casting
around for people who might be in-
terested in coming here and estab-
lishing industries which could work
the year round.

One of the industries noted es-
pecially and in which an attempt is
being made to interest capital is
that of making handles. There is
an unlimited amount of second
growth oak which is used to a great
extent as well as other hard woods.
The hills of Josephine county could
be made to produce large quantities
of these products yearly.

Another industry which is being
pressed is the fir door making. A
city in the northern part of the state
is making large quantities of these
doors annually for the western mar-
ket. Grants Pass has the large
quantity of fir needed, could get the
labor required and could also get
eastern rates, it is said.

Grants Pass needs industries.
Money must be brought here from
outside sources to provide a year
round payroll. Some relief is in
sight through the opening up of a
number of Josephine county mines,
which now appears to be certain in
the near future.

Glorious Hair-

In 90 Days or Money
Back

Women who wish to stimulate the
growth of their hair should use Van Eas
Liquid Scalp Massage. A glorious head
of strong vigorous hair surely follows its
consistent use, and consistent use is easy
because Van Eas comes fitted with a
patient rubber applicator that feeds the
treatment directly to the roots of the
hair, eliminating messy massaging with
the fingers. And the flexible nipples of
the applicator bring a healthy circula-
tion of blood to feed the hair roots.
Buy your Van Eas on our 90-day treat-
ment plan. Money back if it fails.

Kansas City, Mo., July 18.—(I. N.
S.)—The economy of buying one of
the cheaper motor cars has often
been stressed, but an automatic in-
surance against theft accompanying
them is a newly discovered and
amusing item for Kansas City folk.

It all happened because local auto
thieves were possessed of discrimi-
nation taste. Paul Began was rather
proud of his new car, even though
it was of an inexpensive model; so
when two "stick-up" men examined
it before his eyes and decided it was
not worth their while Began waxed
exceedingly wrath. Only their au-
tomatics restrained him from resent-
ing the insult with his fists, he said.

However, the bandits did ton-
down their rudeness a bit. "You
can drive us around a bit," one of
them condescendingly told Began.

Reports of considerable drinking
in secluded corners of behind par-
titions in soft drink establishments
have caused police to order proprie-
tors to see to it that an unobstruc-
ted view of the interior may be had
from the street.

Kansas City has been divided in-
to two factions over the problem of
how, if at all, girls should bob their
hair. One faction favors the new
"King Tut" style, and the other
sticks to the old-fashioned bobbed-
marcelled method. A poll of local
male followers of female fashions
shows that the majority favor the
Egyptianized flapper, masculine sen-
timent seeming to be that the slick
bob, long skirts and straight-line
"motifs" are ultra au fait.

Meanwhile, Sadie Burt, popular
actress and style mentor of this city,
has started something else—the
"shingled head." Sadie's cutely-
poised cranium from the rear re-
sembles little Willie's of a quarter
of a century ago, when barber shops
were something for grown men, and
dad used to do the family tonsorial
work Saturday nights.

According to Sadie, the "shingle"
is an evolutionary result of the
original bob, the "King Tut," the
"Milo Mode," the "Cleopatra Clip"
and others known only to beauty
parlors.

Drums of Skulls Used by Tibetans.

Drums, made out of the tops of
skulls, over which is stretched human
skin, are used to make "music" in va-
rious parts of Tibet. But skulls are
not the only portion of their ances-
tors from which these fascinating peo-
ple extract melody and rhythm. Many
an intriguing tune is played on a na-
tive trumpet formed from a human
thigh-bone drilled and holed and
adapted to the production of sweet
sound.

PEOPLE'S MARKET

DAIRY

TO INCREASE DAIRY PROFITS

Wideawake Dairy Farmers Have Seen
Larger Demand and Are Act-
ing Accordingly.

Campaigns by large dairy companies
urging the public to drink more milk
increase trade channels from the farm
to the city immeasurably. With this
increased demand, however, has come
an increased vigilance by health soci-
eties to safeguard the consumer.

Accordingly, wideawake dairy farm-
ers have foreseen this condition and
have provided for marketing their
milk in a sanitary manner. Milk is
probably more readily susceptible to
contamination than any other food
product.

In order that milk may be delivered
in a sweet, clean sanitary condition, it
is essential that it be isolated in a
cool, modernly equipped building in its
progression from the cow to the mar-
ket.

A good milk house is an invaluable
aid in the production of high-quality

Milk House of Lisle Coleman, Located
Near Wayne, Ill.

milk. Concrete construction, either
monolithic or block, is ideal because it
is permanent, vermin-proof and high-
ly sanitary. Such a structure should
be located with regard to convenience,
but it is better that it be separated
from the stables to prevent the milk
from being tainted by stable odors.

A very serviceable milk house is a
type that can be constructed with the
use of circular monolithic silo forms,
similar to the one shown in the illus-
tration. A foundation which extends
two or three feet into the ground or
to the limit of frost is the first step.
The silo forms are used just as in
making a silo, except that boards must
be set in the forms to cut out portions
of the wall which are to form door-
ways or windows. Heavy reinforce-
ment is not necessary, 3/4-inch rods 20
inches on the center extending in both
directions being amply sufficient. A
conical roof can also be constructed
similar to the type that is employed in
silo construction. A small ventilator
in the peak of the roof with a damper
that can be opened or closed, is a de-
sirable aid in getting a good circula-
tion of fresh air.

Every milk house should be provid-
ed with a concrete cooling tank, the
depth of which is governed by the
height of the cans; it is desirable to
have the cans stand submerged as
much as possible. Circulating water
through the tank and around the cans
will keep the milk cool. To lighten
the labor of lifting and moving cans in
and out of the tank, part of its depth
should be below floor level, and for
the same reason, the width of the
tank should be limited to convenient
arm's reach, which is about that of the
diameter of two cans. The remain-
der of the floor should be covered
with concrete made in a single layer
four inches thick and troweled to a

smooth surface that will not harbor
dirt.

The concrete used throughout should
be of a mixture of one part of cement
to two parts of well-graded sand to
four parts of pebbles or broken stone,
with the exception of the cooling tank
which has a 1:1 1/2:3 mixture to in-
sure its being watertight.

TREATMENT OF CALF SCOURS

Cut Feed One-Half Until Animal Be-
comes Hungry, Then Give
Dose of Castor Oil.

To treat a case of scours, cut the
feed to half or even less than that until
the calf has become hungry. A dose
of one to three ounces of castor oil or
paraffin oil will help to clean out the
animal and may well be given. Three
parts of formalin in a hundred parts
of water, added to the milk at the
rate of a teaspoonful to the pound of
milk will sometimes relieve the
trouble. Another very satisfactory
treatment is to add about four to five
drops of fluid extract of gelsemium to
about one ounce of paraffin or castor
oil and give it to the calf before each
feeding of milk. It is always advisable
to reduce the milk to a half or a third
and divide that reduced quantity into
from two to four feedings a day.

KEEP ALL HEIFERS GROWING

Young Animals Are Unduly Neglected
by Many Dairymen—Feed Silage
and Legume Hay.

Returns get our attention. Possibly
for this reason the heifer calves are
unduly neglected. But this stock should
be kept growing normally. With silage
and clover or alfalfa hay, one should
feed each heifer from two to five
pounds of farm-grown grains per day.
If no silage is available, feed two
pounds of corn daily with all the clover
or alfalfa hay the heifers will con-
sume. With silage and no legume hay,
a good ration consists of a portion of
silage and fodder or mixed hay with a
grain mixture consisting of equal parts
of corn and linseed meal.

FALL AND SPRING CALVING

Three Years' Test Conducted by Mis-
sissippi Expert to Determine
Advantages.

Results of three years' work to de-
termine the advantages of spring and
fall calving with dairy cattle, made
by J. S. Moore of the Mississippi ex-
periment station, show that cows
calving in the fall produced an aver-
age of 172 pounds of milk and 18.4
pounds of butterfat more than cows
calving in the spring. In a comparison
of early and late fall calving the av-
erage difference per year per cow was
633 pounds of milk and 27.5 pounds of
butterfat in favor of late fall calving.

NEEDFUL MINERALS IN FEED

Most Lime Contained in Legume Hays
While Phosphorus Is Found in
Bran and Middlings.

The common dairy feeds containing
the most lime are the legume hays,
cowpeas, clover, alfalfa and soy bean,
that from cowpeas containing the
most. Those which contain the most
phosphorus are wheat bran, wheat
middlings and linseed meal in the or-
der given. None of the concentrates
contain as much lime as the legumes
do, and no roughage contains as much
phosphorus as the concentrates named.

Benefits From Cow Testing.
Cow testing increases the average
production of the dairy herd, first, by
eliminating all low-producing cows,
and second, by enabling one to select
the foundation animals for his herd
on the basis of performance.
