GRANTS PASS VETERINARY HOSPITAL—Dr. R. B. Griffenhagen, Vet. Surgeon. Corner 7th and M Sts. Phone 191-R.

SEND PHOTOGRAPHS OVER PHONE LINES

Device Successful in Cleveland-New York Test.

New York.—Transmission of photographs from Cleveland to New York city over long-distance telephone lines was accomplished in a demonstration by laboratory experts of the American Telephone and Telegraph company.

The method, achieved after several years' work, was described by officials of the company as a "simple, rapid and accurate transmitting system." It will be installed on the company's various long-distance lines. It was announced, in accordance with the demand which arises for this type of service.

Pictures of G. O. P. Convention. Cleveland was selected as the place for the transmitting station, so that pictures taken at the Republican national convention might be transmitted to New York within a few minutes. Actual transmissions showed that photographs could be transmitted to New York and made ready for producing newspaper plates within ten minutes from the time the original photograph was placed in the transmitting machine.

The pictures transmitted were five inches by seven inches in size. Messages in handwriting also were transmitted, the copy received being a facsimile of the original message.

How Photo is Transmitted.

In sending a picture, the original is placed around a cylinder within which there is a photo-electric cell. On another cylinder in the receiving office an unused film is placed. Both cylinders revolve in synchronization. During the operation a very small but intense beam of light is thrown on the original photograph, passing through the film to the photo-electric cell with an intensity proportionate to the lights and shades of the original picture.

By the aid of a new device known as a light valve, a beam of light, varying in intensity in exact correspondence with the original beam received by the photo-electric cell, is thrown on the film onto which the picture is being transmitted. The receiving cylinder revolves, the ray of light moves gradually from one end of the cylinder to the other end. When the end is reached the film is ready for development.

Fortune in Waste Paper

If the waste paper now burned were collected and reworked, 300,000 acres of forest land could be saved and the paper would be worth \$50,000,000 a year to the paper mills.

COLD AND SUMMER

No more need to be miserable for days with colds, runny nose, headache, etc., when new prescription is guaranteed to relieve you in 5 hours, or money back. Works direct to cold poisons in blood and neutralizes them completely. No cold sweats. Send for free sample to Clinical Laboratories, Cleveland, O. Regular dose at all good druggists.

RUPTURE

EXPERT COMING TO GRANTS PASS

Will Give Free Demonstration on

Wednesday and Thursday, July 30 and 31

OXFORD HOTEL TWO DAYS ONLY

On the above date the noted rupture appliance expert, C. F. Redlich, will give a free demonstration.

"You will at once realize the difference between his highly efficient, absolutely sanitary appliances and the inefficient and thoroughly unsanitary elastic web trusses with their bulky, plainly visible pads and their abominable chafing legrays on the various mail order steel or wire trusses which never fit right. All of these unscientific devices make your rupture steadily worse instead of better, as you well know. Mr. Redlich's appliances, scientifically fitted by an expert in person, will give security and comfort for years to come, not only to those with recent and small ruptures, but also to old, neglected cases. They are by far the cheapest in the long run.

Many ruptures are now healed by these improved mechanical methods, which formerly necessitated operations; but do not delay.

Children should never carry a rupture into manhood or womanhood, as they can be easily restored to a normal condition by a proper mechanical method. These clean and sanitary devices will here be most appreciated.

It will not cost you anything to be shown and a visit may mean a great deal to you and those dependent on you.

Home Office: 235 Boston Block Minneapolis, Minn.

A Nutritious Food

Seeds of the lupin, by a German process, will yield albumen which, when added to other flours, makes a bread that is highly nutritious.

In place of the striped pole, barbers are using a queer looking clock, to remind customers it is time to get a shave.

MALNUTRITION HELD MENACE TO CHILDREN

New York, July 29.—(A. P.)—The malnutrition of children in the United States constitutes a serious health problem, according to the New York Association for Improving the Condition of the Poor, which for the last four and a half years has been testing various methods of combating this evil. Some of the facts ascertained from the society's study are included in a statement given out here today.

It is set forth that among 2,151 apparently well children examined in the medical clinics of the society, 636, or 30 per cent, were diagnosed as malnourished. The society is seeking the most effective methods of correcting habits of eating or living which cause malnutrition, and has issued a monograph entitled "Food for the Family," containing suggestions for proper feeding as a means of insuring proper nutrition.

This condition of malnutrition is not due to insufficient food, but to the constant use of improperly chosen food or the inability of the body to make use of the food eaten because of insufficient air, rest, sunshine or physical defects. If these children were in danger from fire or industrial accidents, the report of the society says, every safety device and preventive measure known would be urged to protect them. Although the effects of malnutrition are much slower, often much more indirect and much less dramatic than those from fire or accidents, they are even more deplorable because of the larger number affected and the lingering misery resulting.

"Many a wage earner is unable to increase his income to the safety level because of health conditions due to poor nutrition. Too many children who apparently show no signs of disease or malnutrition are allowed to drift into the wage-earning period with only a part of their rightful earning capacity developed.

"Malnutrition thus concerns more than the individual or the home in which it occurs. It affects the whole country by reducing the economic production of the individual and thereby increasing the cost of living. Since much of the sickness and lowered vitality in later life is the result of poor nutrition, as physicians have frequently stated, the importance of providing educational guidance in nutrition as well as providing attention for the correction of physical defects is very great."

To ascertain what are the principal causes of malnutrition, the society analyzed the condition of 275 families among those which its nutrition bureau is now assisting. Of that number, 227 families required instruction in the preparation of the proper food; 198 needed assistance in the planning of meals; 46 families had to be helped in marketing, because simple foods, entirely strange to them, were recommended; while special diets had to be planned for 88 families. Only 27 families needed financial assistance to provide adequate food. Greater economy was found to be necessary in 44 families, while in 60 families assistance took the form of helping them to readjust expenditures.

Indifference, women working and no one at home to look after the children, living conditions too congested, resulting in inadequate rest and improper ventilation; and mother ill, were other problems found to be responsible for malnutrition.

Homes for Aged

Accounts are not very definite concerning the establishment of the first home exclusively for the aged. In England in early days and in Germany at the end of the Seventeenth century there were hospitals to which the aged and infirm could go. Such a hospital was founded by St. Cross near Winchester, England, in 1135, and another, the Coningsby hospital at Hereford, was founded in 1614.

Printing that pleases—Courier.

The Pledge of the printed word

Friendships in ancient days were formed by pledges of blood. Medieval knights won mutual aid by pledges of the sword. "But modern business forms friends in every corner of the world through the pledge of the printed word.

Advertisements are pledges made especially for you . . . pledges that advertised goods you buy are exactly as claimed.

When you buy an advertised phonograph, you buy one of established workmanship and tone. It has been tested by thousands before you. Its dealers, sure of its worth, invite the testing of millions more.

What is not advertised may be worth buying. What is, must be!

Read the advertisements to know which goods are advertised.

An advertiser's pledge can be redeemed only by your entire satisfaction
