

Online relationship blossoms for older woman

DEAR ABBY
ADVICE

Dear Abby: Two years ago, I met a wonderful man online. He's from Wales in the U.K. He's 21 years younger than I am, so, naturally, I'm cautious about how our relationship will hold up through the years. (He's 42; I'm 63.) He says I am everything he's dreamed of, and more. He's non-judgmental, kind, sweet and very witty. His intelligence amazes me. I love and respect him more than

any person I have ever known. Is it possible to have a long-lasting relationship when there is this kind of age difference? — **Found Mr. Wonderful**
Dear Found: It is possible, but it is unusual. If you know this person only online, I caution you to get to know him, his family and his friends in person before making any formal commitments. I say this because he may not actually be the person he is representing himself to be, and women in your situation have been taken advantage of. This man may be married. Because of this, you should never send him

money, even if it's only a "temporary loan."
Dear Abby: My sister is the worship leader at our church, but I sometimes fill in for her. When I do, I receive a lot of compliments in the form of comparing the two of us. For example, "Your sister is great, but I like it better when you sing." It makes me uncomfortable because I want us both to do well in life. I have no desire to outshine my sister. How can I correct this when it happens without shaming the person? — **Embarrassed in Aurora**
Dear Embarrassed: Make a list of things your sister does

better than you in her capacity as worship leader. Then respond to the compliment by saying, "Thanks for the kind words, but my sister is better than I am at ...," and mention several of them.
Dear Abby: I have been married for 22 years but I have a strong affection for my male best friend, "Ryder." He's extremely easy on the eyes, so much so that even strangers comment on how handsome he is. Sometimes we nap together and take turns being the big spoon. Occasionally, he will put his tongue in my ear, and I think it's cute. My husband is OK with it and shows

no signs of jealousy. I'm pretty sure my feelings are reciprocated because when Ryder looks at me with those big brown eyes, it's as though he is shooting love daggers my way, and he winks at me often.
Next week my husband and I are having eye exams. Would it be too much to ask him to get colored contacts to match our German shepherd? — **Diana in California**
Dear Diana: That's a dog-gone good question. Since your husband hasn't objected to the spooning and the licking, I'm sure he would fur-give you.

RIVER

Continued from Page B1

road was almost wholly in shade thanks to the dense forest on the sunward south side.
We started up the trail and my trepidation about whether this would become one of those ordeals was completely replaced, within a quarter mile, by elation.
It was one of the more enjoyable trails I've hiked in years, the more so because I hadn't expected anything like it.
My wife, Lisa, shared my affinity for the route.
Our kids, Olivia, 14, and Max, 10, weren't exactly entranced by the setting, but they didn't complain.
As is common with roads that follow a stream, this one climbs at gentle grades interspersed with essentially flat sections.
We had to clamber over half a dozen or so logs, but many times more than that have been cut over the years.
Although I suspect decade might be the more appropriate measuring stick. Based on the height of some of the lodgepole pines and grand firs growing in the road bed — 20 feet or more — I don't think it's likely that motor vehicles wider than motorcycles have frequently gone this way since the Reagan administration.

Jayson Jacoby/Baker City Herald

Logs and other woody debris have been placed in the upper Grande Ronde River to create habitat for salmon and steelhead. This site is just downstream from Spool Cart campground, about four miles south of Starkey.

Also many of the logs, including ones that have faded to the light gray that suggests a considerable span of time since the tree fell, were cut so as to admit passage of hikers but not nearly with enough width to accommodate a rig.
I was quite taken with the canyon the east fork has carved over the millennia.
Although the nearest official wilderness is about a dozen miles away — the North Fork John Day — this canyon felt as "wild" to me as places whose untrammeled nature has congressional approval.
The trees contribute much to this sensation.
It is a classic Blue Mountains mixed conifer forest. The canyon

runs generally east-west, so one side is a south-facing slope, the other north-facing. These two aspects, as foresters call them, tend to produce the most dramatic differences, and so it is along the Grande Ronde's east fork.
The south slope (which, confusingly enough, rises north of the river) is a less crowded stand dominated in places by old-growth ponderosa pines and tamaraks — the pine in particular a species that thrives on south slopes which are sunnier, hotter and drier than most firs prefer.
In the strip of relatively flat ground that straddles the stream, the water-loving Engelmann spruce is common, with its stiff, prickly, blue-tinged needles. Per-

Jayson Jacoby/Baker City Herald

The road along the east fork of the Grande Ronde River has become a narrow trail over many years, but users continue to cut fallen logs to keep the route accessible.

haps no other conifer in the Blues is easier to identify, whether by sight or by touch.
On the north-facing slopes, which are in shade for much longer each day and thus more damp, the trees grow closer together and with greater variety — tamaraks and grand firs, Douglas-firs and lodgepole pines.
In a few places the trail (or road that once was) rounded a ridge end or reached some other piece of higher ground that briefly opened a glimpse higher into the canyon. Here, where the view was measured in miles rather than feet, the true expanse of the forest, far out of sight of asphalt or shingled roof, was more apparent, more potent. I define wilderness less by acts of Congress than by my own imagination, which ponders the challenge of getting around without a well-trodden path to follow, where no cut butts of logs show where people, and their saws, once passed.
Yet for all its primeval character, the highlight of the canyon, in my eyes (and ears) is the river.
Here the Grande Ronde seemed not even a distant cousin of the stream in whose mild, slack water I had waded only hours before.
The east fork is a mountain stream, as crystalline as fine glass, as chilly as a soda out of the refrigerator.
We stopped for a rest and a snack where the trail runs close to the river. I dipped my palm into the water and splashed it on my sweaty forehead, which instantly went numb. I would not enjoy wading there.
That evening at home I found online a document from the Bonneville Power Administration that references the east fork of the Grande Ronde. The federal agency, which sells power produced at dams on the Columbia and Snake rivers, wants to pay the Wallowa-Whitman, to add "wood structures" to the reach of the east fork where I had so recently

frozen my fevered brow.
"Structures" seems to me an inapt term, more suggestive of blueprints than is warranted. Nobody is planning to hammer anything together up in that remote canyon. The structures will consist of logs and branches felled there and placed in the channel (by mini excavators, according to the document, an internal combustion aid not allowed in official wilderness) to create pools and other habitat beneficial to fish.
The Grande Ronde's east fork harbors chinook salmon, steelhead and redband trout, all species that need cold, clear water.
Work in the east fork and in two other Grande Ronde tributaries — Upper Fly and Squaw creeks — would be a continuation of a project, dating to the 1990s and focusing on the upper Grande Ronde basin. The Wallowa-Whitman, with assistance from multiple agencies as well as the Confederated Tribes of the Umatilla Indian Reservation, has done similar work — placing what's known as "large woody debris" in the river channel — along the mainstem, including one logjam next to our campsite at Spool Cart.
(Work is also ongoing downriver, along Highway 244 near the Bird Track Springs campground.)
I'm no salmon — there's my aversion to chilly water, along with the absence of gills and scales — but I suspect any anadromous fish that has battled upstream from the Pacific would find the east fork of the Grande Ronde a hospitable sanctuary.
It's cold anyway.
We turned back after a couple miles, not far short of the confluence of the east fork and Little Meadow Creek, according to my map.
The map also shows that the east fork heads a couple miles farther to the east, where no roads or trails go.
As goals go this strikes me as a fine one, to find the spot where that frigid water begins its long and tortuous journey.
