Catarth Cannot Be Cured

with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarth is a local disease, greatly influenced by constitutional conditions, and in order to cure it you must take an internal remedy. Hall's Catarth Medicine is taken internally and acts thru the blood on the mucous surfaces of the system. Hall's Catarth Medicine was prescribed by one of the best physicians in this country for years. It is composed of some of the best tonics known, combined with some of the best blood purifiers. The perfect combination of the ingredients in Hall's Catarth Medicine is what produces such wonderful results in catarth conditions. Read for testimonials free.

HOW TO RENEW STRAWBERRY

Leave Only Enough Old Plants to Start Runners—Patch Should Be Moved and Raked.

The time to renew the strawberries for next year's crop is immediately after this year's crop is harvested. Only enough old plants should be left in the rows to start the runners. The best berries are produced on the new growth. Before the plants are thinned the whole patch should be moved, then thoroughly raked and all the old leaves burned. This will destroy a great many insects that had intended to winter over on the plants. It will also get rid of numerous diseases that might be carried on the old plants. If the whole patch is burned over it should be done on a very windy day, else the crowns of the plants will be injured past recovery.

The Sentinel and the Oregon Farmer can still be obtained for \$2.15 for one year

Daddy's Evening Fairy Tale

BY MARY GRAHAM BONNER

MONKEYS

"What a good time we are having here in the zoo," said the Bengal Monkey.

"Yes," said Billy Bengal Monkey, "I'm having the best time in my monkey life. I don't know when I've had such a good time as I have had today. And I shall still continue to have a good time."

"I am not in the least tired of playing so I shall stop playing. I'll keep right on."

"There are so many nice games for us to play here too. There are ladders and we can climb and run up and down the ladders."

"Then there are swings for us to swing upon. There are board benches where we can sit and think of what game we will play next."

"Or we can think of what is the best game in the world. It is hard to make up our minds about that, and it requires lots of thought."

"Even after we have made up our minds about it we cannot decide. So it is well to have boards and benches to sit upon and think over the good games. There are two Arabian Baboons living in those two cages across the way. One of them is sitting up on his high perch and he is yawning very hard. And he hasn't the manners to put his hand in front of his face when he yawns as polite creatures will do. They come from Arabia, and they live together in great numbers. Yes, lots and lots of them travel together in the rocky and wild country of Arabia. It's a big, open country and they love it over there. But they are happy here, though that one Arabian Baboon does seem to be in need of a nap. He yawned again, just a moment ago. How handsome those two fellows are with their gray suits trimmed with lavender, or tinged with lavender, I should say. They have such high, fine-looking brows or foreheads and such long faces. They have whitish hair and it is very bushy

and thick and it hangs down either side of their faces in a most becoming manner. In fact their hair looks something like bunches of cotton. They have very queerly shaped noses but interesting looking noses.

"How quiet they are! They are really both sleepy looking."

"Any one would notice them anywhere. People who come to the zoo look at them and admire them and call their friends to come and see them too."

"Then there is the Mandrill West African Monkey in the cage down the room a little way.

"He lives on fruit and insects, and he travels with many of his relations when he is free. Yes, they move about together. In the next room I've heard there is a large Anconada snake and he is a dangerous fellow. I'm glad he isn't here. I wouldn't like him for a playmate. I've heard the people speak of him though and of his great size. The Mandrill West African Monkey is leaning up against the side of his cage as though he felt tired."

"But Billy," the other monkeys said, "you told us you weren't tired of playing, and that you were going to keep right on playing and that you weren't going to stop at all."

"So I did," said Billy, "but I was looking at my neighbors and admiring their looks."

"I didn't mean to stop at all. But now I will run races with any of you and all of you, and I'll swing and play see-saw, and any other game you want."

"Good," said the other monkeys. "We want to play, too, some more. Exercise 'He Lives on Fruit.'"

All monkeys think as come on, Billy, you're fit."

So Billy chased the other monkeys and they chased him and they did tricks on their springs and gave a little circus all of their own with Billy as the ringleader.

And all the people who came to the zoo said:

"Don't those monkeys ever get tired? How do they do play?"

But the monkeys played until it was supper time and they felt both hungry and tired.

First Oregon Locomotive

Construction of the first locomotive ever built in the west has been completed by the Willamette Iron & Steel Company and delivery was made this week to the Coos Bay Lumber Company, which will operate it on its Coos county logging road, says a Portland news dispatch.

This locomotive is of the three-cylinder side-gear type and is the first of a number of engines of similar type to be built during 1933. The company, according to A. G. Labbie, president, intend to produce one engine per month, beginning in January. Orders have been received from the Monroe Logging Company, the Beaver Creek Logging Company and the Edward Rutledge Timber Company.

This locomotive was produced in response to a demand from loggers for the construction of motive power nearer operations. The first locomotive has been tested and has proved so satisfactory that the Willamette company is planning the construction of an additional plant with facilities to be devoted to engine construction.

All of the important parts of the locomotive were built in the Willamette shops.

The new locomotive is of the vertical type, capable of 900 horsepower. Valve driving mechanism has been used. It weighs approximately 180,000 pounds. It has oil-burner equipment, but is so designed that substitution of other fuel will be possible.

This engine was taken through Coquille Monday morning as a part of a logging train going up to Powers.

65 From Coos

"Coos county is well represented at O. A. C., not only in numbers but also in activities," says Professor Frank L. Snow, head of the department of industrial journalism.

The latest registration figures given out by the registrar's office shows 65 students from Coos county; 20 registered in commerce, 25 in agriculture, 10 pharmacy, 6 forestry, 3 vocational education and 5 taking special work in agriculture and commerce.

Marshfield has the largest quota, having 26 regular students, North Bend comes second with 12, Bandon 6, Myrtle Point 4, Coquille 3 and Elverton and McKinley 2, Allegany, Arago, Broadbent, Cooston and Eastside, Norway, Powers and Prosper each have one.

Dogs Tread Coons

L. J. Roberts, who lives up the Middle Fork about eight miles, had some sport on Monday noon hunting. The coon have been hothering in his orchard and cornfield for some time so he and one of his neighbors with their dogs proceeded on a hunt. Putting the dogs on the cold tracks about an hour was spent in trailing the coon family up. When they caught up with dogs at bay, in a tree they spied four near the top, which they shot out. The report is that there are quite a number of coon along the Middle Fork this fall—Myrtle Point American.

Entertains at Lee

Mrs. Loren Young entertained the Lee Sunday School at her home Friday evening. The features of the evening was an indoor track meet that was greatly enjoyed by all present. Mrs. Karl Anderson and Mrs. Ben Gant were leaders. Mrs. Anderson's side was victorious winning a much larger score. Ice cream and cake were served afterwards.

Nearly every family in the neighborhood was represented, and every one feels that such a good time should be repeated, so it was decided to have a social every month. The next one will be with Mrs. Gant.

Justice Stanley has set next Wednesday, the 22nd, as the date for the trial of Austin Clinton, charged with reckless driving a couple of weeks ago.

"HUMAN HEARTS" with House Peters, dedicated to the mothers of the world by Carl Laemmle, a story the whole world loves, at the Liberty next Tuesday and Wednesday.

Discontented

"Are you really content to spend your life walking around the country begging?"

"No lady," answered Weary Willie. "Many's the time I've wished I had an auto."—American Legion Weekly.

Notice to Hunters

This is to notify Hunters that we have leased our land to the Coquille Rod & Gun Club for hunting purposes. Any person hunting on these premises without a membership card from the above club will be prosecuted to the full extent of the law.

Horton & Campbell, E. E. Hunt.

Your Kitchen

Is not complete without a LANG Hot Blast Range. Constructed to cut fuel costs. Thick solid top—two lids only—heat and flames forced entirely around oven, utilizing every heat unit. Made of Armo polished iron. Equipped with hot water coils.

The LANG Pacific Range is becoming the most popular range in the West. Its simplicity and economy of operation, together with its appearance are reasons for its increasing popularity.

RAPE IS IDEAL FOR PASTURE

Found Especially Valuable in North Dakota Because It Is Not Injured by Frost.

In North Dakota they have found that an ideal fall pasture can be provided by sowing two or three pounds of rape seed per acre in the corn at the last cultivation. If the corn is to be hogged off, rape will furnish an ideal pasture for the fall season. It is especially valuable because it is not injured by light frosts. In fact, it has been found good for forage purposes until time of severe freezing.

WASTE OF GRAIN EACH YEAR

Much Loss Caused Every Season by Poor Shocks—Man Driving Binder Can Help.

Every season there is much waste of grain caused by poor shocks. The man driving the binder can help the shocker by making timely adjustments, so that all the bundles are of proper size and shape and the head placed in the proper position on the bundle.
