CORRECT TIME TO CAPONIZE
Impossible to Determine by Age as All Breeds Do Not Develop Alike—Watch Comb.

This is a question asked more frequently than any other by novices. It is a very important question, and the answer should be so simple that anyone could understand.

It is impossible to tell the best time for caponizing by the age, because all breeds do not develop alike; neither do birds of the same breed and hatch; some will be small of body with large comb and wattle developments, while others will show very little comb and be large and vigorous.

With any breed when the comb and wattles begin to grow you may know that the reproductive organs are growing correspondingly; when the little comb begins to redden you may know

A Well-Developed Capon.

that the organs are receiving more blood for their very rapid growth; as they receive more blood the danger of an operation is greater, for the artery carrying the blood to the testis is larger and in more danger of being ruptured.

Therefore, if you wish to operate at the perfect time watch the growth of

the comb and wattles; when they are just "showing red" is the best and proper time; then there will be little danger to the life of the bird, less pain and no "setback" to speak of; while if you wait until the comb is bright red and the wattles hang considerably there will be more danger of death and more "slips."

EARLY HATCHED FOWLS BEST

Pullets Mature So That They Begin to Lay in Fall When Fresh Egg Supply is Low.

Every fall hens take a vacation. In doing so they have very important business on hand. Typically feminine by nature, they insist upon having a new dress each fall. During their vacation they are engaged in shedding their old plumage and in growing new, and their energy is so occupied in this way that they lay few or no eggs. The process of molting or changing their plumage takes at least three months on the average, and it is due to this three months' vacation that the supply of fresh eggs is so scarce during the fall and winter. Early hatched pullets mature so that they begin to lay in the fall and early winter, and it is upon these early hatched pullets that the poultry keeper must depend for his supply of eggs during the time the old hens are molting and resting from their labors as egg producers. So if you want eggs when the old hens have quit laying, be sure that you hatch early and have a nice bunch of early hatched pullets coming along to supply the eggs at that time.

RYE AND VETCH HELP SOILS

Combination Makes Fine Crop for Cattle and Contributes Source for Nitrogen.

Rye and hairy vetch make a very fine sodding crop for cattle. Vetch with rye also greatly adds to the crop for soil improvement. Vetch, being a legume, contributes a source for nitrogen-gathering organisms, and this helps enrich the soil in that constituent. One bushel of rye to thirty or forty pounds of vetch makes a good combination. As vetch seed are usually high, less may be planted, though with less benefit to this soil.

The Sentinel and the Oregon Farmer both for \$2.15 a year.

Marriage Licenses

Nov. 9—Theodore Burr and Thelma Norma DeWeese, both of North Bend.

Nov. 11—Milton Epperson and Hazel L. Wise, both of Powers. They were married on Sunday by Rev. Thos. Barklow at his home in Myrtle Point.

Nov. 10—Sidney O. Lusk and Naomi Clifford, both of Powers. They were married on Sunday by Rev. W. N. Feris at the Community Hut in Powers.

Nov. 14—John Robert Milton, of Lakeside, and Elizabeth Meservey, of North Bend. They were married the same day by Justice J. J. Stanley at his office here.

Nov. 14—Joe L. Harry, of Coquille, and Winnie Ruth Newhouse, of Myrtle Point. They were married the same day by Rev. Thomas Barklow at the residence of E. Newhouse at Myrtle Point.

Probate Court Items

Norman E. Johnson, of Marshfield, has been appointed executor of the will of his mother, Mrs. Wilhelmina Johnson, who died at Marshfield Oct. 27. There are ten heirs, five sons and five daughters, who participate in the estate, which consists of \$5,000 in real property and \$2,500 in personal. John C. Merchant, Albert Seelig and Erick Johnson have been named as appraisers.

New Cases in Circuit Court

Nov. 13—P. S. Emery vs. B. D. Emery.

Nov. 13—Buehner Lbr. Co. vs. C. L. Smith and Callie Smith.

Nov. 15—C. W. Gardner vs. Robt. Goodrich.

Nov. 15—Frank Small wood vs. E. S. Braden and Alma H. Braden.

Health Notes

Of all the physical defects of our children, simple dental defects are the most common. Of the mixed physical defects, those combined with dental defects are most common.

Some health authorities feel that lack of bad teeth is poor general health caused by bad ventilation, poor or improper food or an insufficiency of such bone building foods as milk, eggs, vegetables and graham bread. They are no doubt correct in their judgment. On the other hand investigation has proven that correction of any of a child's physical defects will improve his general health. It is plain that diseased or dirty teeth at the very entrance of the digestive tract must contaminate all food taken by the pupil and thus throw a great and unnecessary burden in neutralizing this contamination on an already overtaxed body.

Many dentists believe that diseased teeth are a cause of diseased tonsils. It is the function of the tonsils to overcome mouth infection so it may be that in constant endeavor to do so the tonsils themselves at last succumb to the overburdensome task. With tonsillitis come adenoids and ear infection, then nasal infections, all indicating that the body is no longer able to protect itself—that it has lost its resistance power. It is necessary then as a first step in remedying a child's physical defects to give attention to his dental defects, not only because they are most common but also because by first caring for the teeth, some of the other physical defects may disappear of themselves.

As to proper tooth and bone building food, one quart of milk a day per child will supply this food in the most usable form. Graham bread instead of white bread is good; eggs and vegetables also contain the necessary materials. The dentist requests us to come in for tooth inspection once a year and better twice a year. Should a cavity form in a tooth it is more easily, more painlessly and less expensively filled while it is small. Every child should be provided with a good tooth brush and dentifrice. The tooth brush should be cleaned or renewed occasionally and the child should be supervised as to the use of the dentifrice. Though he should learn to brush his teeth after each meal, once a day will be often enough to use the dentifrice which should then be thoroughly washed off the teeth. Careful hygiene of the mouth will do much to prevent destruction of the teeth from contact with decayed food.

However, it is not alone the child in school who has dental defects. A large number of children come to school with teeth already bad. So it is necessary to begin in the home to remedy dental defects and with the first teeth. The first teeth are important. Aside from the importance of their soundness to the child's general health, the first teeth should be retained in their proper position in order for the second teeth to grow properly into place. If they have cavities they too should be filled, if only with cement.

Henry W. Irwin, M. D.

Responding to the Appeal

"Oregon people are responding in a gratifying way to the appeal of the Smyrna sufferers," states J. J. Hand-saker, Director Near East Relief, in a letter to the Sentinel.

"Portland is making contributions in four different ways, first, there are individual contributions, second, an appropriation of \$33,000 from the Community Chest for Near East Relief, third, nearly all Sunday Schools and churches of Portland are planning on generous Christmas offerings and a special donation from the emergency fund of the Community chest if the total budget of \$60,000 is raised.

"Other parts of the state are equally generous. Hood River Community church gave an offering last Sunday of more than \$2100 and expects to bring it to \$2500.

"Eastern Oregon counties like Wallowa, Union, Baker, Umatilla, hard hit by low prices for farm products, are all responding liberally.

"Seaside's quota of \$1000 was raised to \$1200.

"President Harding contemplates issuing a second proclamation as conditions have become so much worse during the past few weeks.

"The Red Cross during its annual roll call is collecting funds for Smyrna and is also collecting clothing all over the nation.

"I can't thank the Sentinel enough for opening its columns to this appeal and I am confident the friends in Coos county, who love little children will gladly respond to your appeal."

Curry County History

The following from the Port Orford Tribune of Nov. 1, 1892, shows that thirty years ago the people of that place were expecting the railroad which is still in the dim future, though Coos county people cashed in on their expectations of connection with the outside world in 1914:

"The people of Curry are pleased to know that the Coos Bay-Roseburg railroad is an assured fact, and that it will be pushed to an early completion. Coos and Curry are neighboring counties, both being isolated from the rest of the state, and they have many interests in common. Any enterprise that directly influences one will either directly or indirectly influence the other. A railroad from Coos Bay to Roseburg will place Curry in much closer communication with the rest of the state, lessen the time and expense of travel to and from the interior, and give us a better mail service. And it will ultimately result in bringing a railroad to Port Orford, where the producers of the state will find a magnificent, deep water, barless harbor, from whence wheat may be shipped direct to the markets of the world in the largest vessels that float, with no charges for pilot or towage."

The thought that Curry county was going to raise wheat enough for market to attract carriers seems somewhat naive after a generation has passed.

Five Moose in Douglas Co.

District Game Warden Art Fish left Wednesday morning for Kroll, in the district north of the Umpqua river, where he goes to see how the five moose brought from Alaska and released in that territory are doing. Mr. Fish has had word from the vicinity that the yearlings are doing fine and seem to be in their element.

Foreword said that the best district for moose is where there are lakes and plenty of water, and information from Kroll says that the babies are often seen diving beneath the water and eating lily roots, of which they are most fond.

Reports from that section also say that the moose at present are very domestic, as, having been handled in the north, they seem to have adopted domestic traits and apparently do not care to take up the wild life.—News.

Trespass Notice

All persons are hereby warned not to trespass on the W. F. Rohrer property between the Gilman ranches as same has been leased for hunting purposes. W. F. Rohrer.

Two Divorces Granted

Judge Cook granted two default divorces in Circuit court here Tuesday. One was to John Hyman, of North Bend, separating him from May Hyman. The alimony allowed was as stipulated between the two, and the defendant was allowed the custody of the minor daughter until the further order of the court.

The other case was one of the shortest on record when the judge consumed just four minutes in granting Elmer C. Briner a divorce from Edna E. Briner.
