# DESOLATE ORPHAN BECOMES CHILD PRODIGY

AZADOUHI PACHALIAN.

"Do all the little girls in Armenia dress like you Zadi?" "Oh, my! no, you ought to see how many clothes we don't have." This conversation in a Portland office is typical of the quick wit and ready response of Azadouhi Pachalian, who was brought to America by her foster mother, Mrs. Pearl E. Gansaway, formerly of Medford and Seattle.  
"Little Azadouhi is no more lovable nor brighter than the majority of the 3,500 children over whom Dr. Gansaway has medical oversight in Beirut, Syria," states Mrs. Gansaway. "It was her utter helplessness during the six months we fought so hard for her life that endeared her to us so that we felt we could not give her up and I brought her to America to adopt her." In Judge Tallman's court in Seattle the adoption was carried out while she, four and a half years old, solemnly raised her hand and declared, "I adopt you as my mamma."  
Azadouhi was the first and only child of a young couple of education and refinement and was born shortly after the armistice was signed and

because it was thought that freedom had come she was named Azadouhi (daughter of freedom). But the close of the war did not bring peace to the Near East and during the last three years more than a million people have been rendered homeless. Many of these who are now homeless refugees were three years ago living in modern, steam-heated homes and were sending their children to foreign countries for an education. Azadouhi and her parents were among those exiled. The father was driven into the Turkish army where he was killed. Azadouhi and her mother wandered in the woods from the time she was nine months old until she was a year old when both mother and child were suffering from measles, mumps and dysentery.

"They found refuge in a Near East hospital only to be discovered by the Turks, who two days later drove the mother out to die. Why they left the baby no one knows. Then began the longest and hardest fight of Dr. Gansaway's long medical career. The result speaks for itself in this happy, bonny girl, who in a test made at Cheney Normal School, showed a mentality of eight years at the age of four and a half.

"There are thousands of children with all of Azadouhi's capabilities, homeless in Greek and Syrian refugee camps today. They are beyond the reach of the Near East Relief simply because present funds are exhausted when we have cared for the fifty thousand children already in our care. Recently a bereaved mother gave me \$60 to guarantee the care for a year of a child such as Azadouhi. Her love now flows out to a child somewhere in the Near East," states J. J. Handaker, Regional Director of Near East Relief.

The Near East Relief offices are at 339 Burke Bldg., Seattle and 613 Stock Exchange, Portland.

# NEW INTERNATIONAL APPEAL FOR REFUGEES

Geneva, Switzerland.—A joint appeal from twenty nations has been placed before the League of Nations, asking for the appointment of a commission to assist the American Near East Relief in its work for refugees in Greece and Bible Lands. The appeal says: "In view of the international character of the question involved and the necessity for an impartial, accurate and authoritative statement of the situation, we request the League of Nations to appoint a commission which shall make a prompt, thorough inquiry into the distressing conditions in the Near East and indicate what steps should be taken to ameliorate these conditions in accord with humanitarian views of our twentieth century life."

# The New Hup Eight

The widely heralded new Hupmobile Eight, representing what officials of the Hup Motor Car Corporation believe the public has long desired in a powerful, medium-sized, multi-cylinder motor car, will be on display in the showrooms of J. D. Graham & Son, on Front street, Hupmobile distributors, just as soon as a car can be secured from Portland.

Long rumored in the automobile industry and among automobile owners generally, the new Eight just announced is an addition to the Hupmobile line of successful four cylinder cars that the company has produced for 16 years.

The new car is built in four body styles of decidedly distinctive appearance—roadster, touring car, four passenger coupe and five-passenger sedan.

Realizing the advantages of the eight-in-line principle in its smooth power, flexibility and inherent freedom of vibration, Hup engineers during nearly two years of planning, designing and testing the car, studied the designs and results obtained from every leading multi-cylinder car ever placed on the market here and in Europe. Smoothness of performance at all speeds, all-round reliability and an economy of operation heretofore unknown to the eight-cylinder field, were features toward which they built. Actual road tests aggregating more than 55,000 miles during the last year have, they say, proved that the features they desired have been incorporated in the car.

A score or more of fundamental and revolutionary features have been built into the new Eight. The major ones include:

1. The shortest, most compact eight-in-line engine ever built.
2. More power per cubic inch of piston displacement than any previous multi-cylinder automobile engine.
3. No "roughness" anywhere in the engine's entire speed range.
4. Compactness for handling and parking, with unusual roominess and riding comfort.
5. Balanced combination of speed, lugging power and rapid acceleration, with full power development transmitted to the wheels with minimum frictional loss.
6. Unusual operating economy, both in continuous high speed operation and at a steady 20-mile-an-hour pace.
7. Outstanding ease of starting, operating and stopping.
8. A combustion chamber particularly designed to produce the highest degree of power efficiency which can be combined with utmost smoothness.
9. Design of crankshaft, connecting rods and pistons new to American engineering, resulting in inherent smoothness and eliminating crankshaft whip and distortion.
10. Tremendous flexibility, both in the engine and throughout the car.

# State Should Help Advertise

Already endorsed by a majority of Chambers of Commerce throughout the State, a measure is to be presented at the coming session of the legislature by Representative Andrew M. Collier, of Klamath Falls, asking for an appropriation of \$50,000.00 a year for two years to assist the State Chamber of Commerce in its work of exploiting Oregon.

Under the provisions of the bill the expenditure of the money will be directed by a board of five consisting of the three members of the State Board of Control and two to be named by the State Chamber. In this manner the state will at all times retain supervision of the disbursement of funds allowed.

The State Chamber of Commerce is an organization fostered by the various Chambers of Commerce throughout the state and has been financed chiefly by membership dues and contributions at large. L. E. Vining is president and A. S. Dudley is manager. Recently Mr. Vining visited the East, where he came into contact with hundreds of manufacturers and potential investors in the northwest. His work was favorably and broadly commented upon and has been viewed as exceedingly constructive. Last year Mr. Vining succeeded by personal solicitation in inducing the northwestern railroads to join in an extensive advertising campaign for Oregon. It is with a view of carrying on the work of the Chamber along this and other productive lines that a move has started to provide the state organization with sufficient means to function.

Those interested in the measure express themselves as convinced that the State Chamber is an institution of great worth to the state at large and one which should greatly enjoy state-wide support.

# New Savings Accounts

The hearts of several children in Coquille were made glad this Christmas by parents placing in the hands of Santa Claus little pass books evidencing the starting of a savings account at this bank.

The time is ever present for thoughtful parents to do this, but New Year's Day is another good starting time for savings accounts. Come in and start the New Year right. This applies to adults as well as the children.

Referring to her relations with this bank, a little girl said to her mother recently: "I like to go there, because they treat me kind." Our Savings Department likes to do business with the children, and has taught many of them real ideas of thrift. You would be surprised at the interest they show in their growing savings accounts.

Trusting you had a most pleasant Christmas and wishing you happiness and prosperity for the New Year, we wish to remain,

Yours to serve, faithfully,

# Farmers & Merchants Bank of Coquille, Oregon

# TIRES VULCANIZED

We make them give you service

What's the use of throwing away your tires when you have many more miles of service in them? Did you ever stop to consider the money saving you can make by having them repaired?

We have been fortunate in securing a vulcanizer who is thorough and capable in his work and if you have any tires you have discarded, bring them in, we will tell you how much it will cost to repair them and whether they will give you mileage.

All work guaranteed at a reasonable price

# Javanese Clever

The Javanese natives have a great love for music. Some of their musical instruments are very ingenious in appearance and pleasant to listen to. One of them, which is called a gamelan, is a sort of native orchestra, composed chiefly of gongs sounded in various cadences so as to produce a very sweet melody, with an accompaniment of wind and string instruments. A bamboo instrument called the anklung is also very popular. This is shaken by hand and gives forth a sprightly rhythm of which the natives are very fond. The music is played in the open air and is frequently the accompaniment to entertainments at which the age-old stories of the island are told. The Javanese also excel in work in copper and gold, although, having none of their own, they have to import their raw materials.

# Cleveland on the Cow

Grover Cleveland's composition on the cow, written when he was a small boy in school, follows:

"The cow is very useful if it were not for the cow we could not have no milk to put in our coffee and tea."

"Every part of the cow is useful; the skin is tanned into leather and boots are made of it. The flesh is good for food and is called beef; their horns are made into buttons. Of milk butter and cheese is made. There is a glistening substance by the hoof which is made into glue—indeed if it were not for the cow, we should have to do without many things which are considered necessities of life."—Kansas City Times.

# Giant Thistle, Grown on Coast, in Demand

Among the profitable crops grown by Californians in the region of San Francisco is a giant Mediterranean species of thistle. Soil and climate there seem to be exactly suited to its needs, says the Pathfinder Magazine. Attempts to grow it elsewhere have invariably resulted in failure. Like the thistles with which all are familiar, it has formidable spines, only they are longer and more cruel than the average. It has a large purple flower, so sweet scented that bees find it irresistible. Rarely, however, are the buds allowed to develop into flowers, for the buds are esteemed as a table delicacy, being harvested and sold as "artichokes."

A quarter acre for the buds is not an unusual price in San Francisco and at that they take precedence over the finest oranges, raisins, apricots, etc., for the growers craftily time their development so that they may be marketed just at the psychological moment, so to speak—that is, in midwinter, when there is little else of the same nature to compete with them. This is done by cutting back the plants in June, pruning them down to the ground. Within a short time new shoots appear. Then if plant food and water are supplied in sufficient abundance the long sunny days bring about ideal development.

The bud harvest begins in October and reaches its peak about the first of April.
