French "Tiger's" Tilt

With Danish Critic

The late Georg Brandes, famous Danish critic, who was the same age as Georges Clemenceau, was bound to the French statesman by a friendship which lasted from the last years of the second empire until the middle of the World war.

The Dane, always haunted by his vision of a republic of Europe, wrote a book in which he passed stern and pessimistic judgment on the policy of the allies. To this Clemenceau retorted in a biting article which he entitled "Farewell to Brandes."

Brandes, however, did not say farewell to Clemenceau. One of his last critical articles was a review of the old Vendean recently published "Demosthenes." He paid an eloquent tribute to Clemenceau's mental vigor and great culture; but he remarked, not without finesse, that the French statesman had exalted the Athenian patriot at the expense of the Athenian orator. Brandes considered that the greatness of Demosthenes was due more to his oratorical genius than to

his stubborn policy of chauvinism.

"To Clemenceau," he wrote, "Philip of Macedon and Alexander were foreign and barbarians lightly dusted with Greek culture. The Macedonians of course were not Greeks. Yet Alexander, a cosmopolitan, spoke perfect Greek and slept with the 'Hades' under his pillow, while Aristotle guided his thoughts. How can he be represented as a barbarian adversary of the true Greek spirit?"

"Demosthenes' narrow idealism resulted in the destruction of the splendid cities of Greece which a more realistic policy might have preserved perhaps for centuries. Demosthenes defended the ancestral tradition, Athenian idealism and honor, with a vigor and nobility which were admirable, yet fatal to the real interests of Athens, which were those of the whole universe."—From L'Europe Nouvelle, Paris. (Translated for the Kansas City Star).

Coquille Flower Lovers Club Notes

President: C. T. Skeels.
Place: City Hall.
Time: 7:30 p. m.
Secretary: Miss Pauline Chase.
When: First and Third Tuesdays.
Members—139.

The regular meeting of the Coquille Flower Lovers' Club was held at the City Hall on Tuesday evening, July 16, being called to order by the president, C. T. Skeels. The entire time was taken up by general discussion. The trip which the Sunshine Club made to Shoreacres and Sunset Beach was reported on. The exhibit for the local club at the North Bend Flower Show was arranged for and will probably consist of a display of cut flowers.

Two committees were appointed to make arrangements for this display. The first committee is to solicit and collect the flowers for the show. Its members are: Mrs. Wm. Candlin for the east part of town; Mr. Geo. Leach for the downtown district; Mrs. J. P. Beyers for the north end and Spurgeon Hill and Mrs. Geo. Bohrer for Sanford Heights.

The second committee has as its duty the arrangement of the flowers at the show and has as its chairman Geo. W. Taylor Sr. with Mrs. Ida Owen and Mrs. J. P. Beyers as assistants. Mr. Sloan has agreed to take the flowers over to North Bend in his truck.

The members of the soliciting committee are asked to have a report ready by Monday, July 22, as to what flowers will be available in their districts.

Start Perennials in Cold Frame

By Romaine B. Ware

With midsummer here, it is time to start the seeds of perennials for the plants we want this year. Perennials may be raised by the hundred at a mere fraction of the cost if purchased from the growers. The seeds may be started any time from now on till the first of August, but the sooner you get them in the ground the better plants you will have this fall.

If you are the fortunate owner of a cold frame this is the ideal place to start them. The moisture and shade may be controlled much better than in the open. Prepare the soil by working it up very fine—in fact, the top two inches will be best if sifted through a fine-mesh screen. I used to use an ordinary window screen for

sifting the top inch, in which actual seeds were placed. Unless soil is naturally light it should have a liberal mixture of sharp sand and some leaf mold to lighten it up. Heavy soils pack and cake so that seeds, especially the small ones, have difficulty to germinate. Too, you should be sure of drainage of your seed bed. Excess moisture will be fatal to the little plants, as it causes disease in the shape of fungus called "damping off." There are several commercial remedies on the market today for preventing this disease, and if you are growing any great number of seedlings or experimenting with extra choice seeds you had better treat your soil with one of these new compounds.

When you plant the seeds water them carefully and cover with a sheet of newspaper to hasten germination. They will germinate promptly in the dark, but just as soon as they are through the surface of the soil they need light and air. The little seedlings are quite tender and strong sun will harm them, so it is suggested that they be shaded with a strip of cheesecloth or a screen made of lath placed about two feet above the bed. The screen is made with ordinary building lath spaced about an inch and one-half apart. The sun shining through this is so diffused that it will not harm them.

In planting the seed do not sow it too thickly. When the little plants are close to each other they are more likely to suffer from the dread damping off. Too, their roots grow into each other and when it is time to transplant they suffer more harm. When they can be transplanted individually with goodly balls of soil they have a much better chance to succeed. If they are planted too thickly it will pay to thin them severely simply by pulling up the surplus, as the ones left will do better. At planting time the seeds should be but slightly covered, some of the tiny ones will be better if simply pressed into the surface of the soil. The moisture conditions should be carefully watched, as they must not dry out. If they become dry after starting it is generally fatal. Do not use any fertilizer of any kind in the seed beds. Slugs, snails and cutworms are fond of the little seedlings, so you must watch out for them. If they are troublesome they may be poisoned or a few visits at night with a flashlight will detect many of them and they may be caught and destroyed.

After the little plants are started get their second true leaves they may be transplanted to another bed, where they may remain till large enough to place in their permanent location. In this second bed they should be set in rows, that cultivation will be easy. If your soil is not naturally fertile some bone meal may be added to this second bed. Use the steamed bone meal, as it works more swiftly. A liberal handful to each square foot of soil is sufficient. After the little plants become established in their second bed do not water them too much, as you want them to grow good root systems. If they have to reach down and out after moisture the roots will be stimulated. Of course, they must not be allowed to really dry out.

In planting seeds this year, try to get something you have not had in the garden before. There are countless new things and you will find the experimenting with them most interesting. Don't plant the same old thing in your borders every season. In starting perennials from seed you can have them in large quantities. In the hardy border they make so much better effects in masses. This spring I visited a great many wonderful gardens around Philadelphia, New York and Washington, and the hardy borders were especially good. Great masses of Columbine, Arabis, Aubrietia, Pyrethrum, Iris and many other things made them gay pictures.

Radio Idea Old

Radio communication is not an invention, nor is reality a discovery. The theory was known long before anybody was able to apply it in practice. Numerous inventors were trying to devise apparatus that would make the theory work. For this reason, several different practical systems of wireless telegraphy appeared about the same time. Marconi had the good fortune to be first, but he distanced his nearest competitors by only a short time. It was only by accident that electrical communication by wire was perfected before electrical communication without wires, as both are implied in the electrical knowledge that preceded them, and inventors were working in both fields for many years before anybody in either group succeeded.

Humors Are Hormones

Another belief of the old-time doctors has been upheld. What they called "humors" in the blood has proved to be the modern "hormones" which are secreted from certain ductless glands and not from the heart and liver as once believed. The old-time doctors claimed the disposition of their patients and some of their ills were due to these "humors." Scientists now admit that they were not far wrong and declare that the "hormones" play an enormously important part in determining the disposition of an individual.

Cooperation

SATISFACTORY banking relations are based upon mutual knowledge and understanding between the bank and its customers.

It is the aim of the Farmers & Merchants Bank to take an active interest in the financial affairs of its customers. One of the chief characteristics of our service is close personal co-operation.

A talk with one of our officers may suggest how we may be of service to you.

FRIENDLY, HELPFUL SERVICE

Farmers & Merchants Bank

COQUILLE, OREGON

The Pioneer Methodist Church

S. D. Walters, Pastor
191 So. Henry St. Phone 50-J
Sunday School 10 a. m. Lyman Carrier, Supt. Bring your children and remain for the morning worship.

Epworth League and High League 7 p. m.
Mid-week Bible study Thursday 7:30 p. m.

If not attending Bible School or church elsewhere, we invite you to attend the new Pioneer Methodist Church in the heart of Coquille.

Church of Christ

Sunday, July 21st
Bible School at 10 a. m. Ned C. Kelley, Supt.
Preaching and worship at 11 a. m. There will be a basket dinner and preaching at Fairview following the services here.
C. E. at 7 p. m. and evening services at 8 o'clock.
We are always glad to have strangers and visitors present at our services.

D. L. Hackett, Pastor.

First M. E. Church

Sunday School 10 a. m. Mrs. Belle Elwood, Supt.
Morning worship 11 a. m.
Prayer meeting Wednesday 7:45 p. m.
A church with a welcome to all.
Gus A. Garboden, Pastor.

Foursquare Lighthouse

Sunday School 9:45 a. m.
Preaching service at 11 a. m.
Prayer meeting all Sunday afternoon.

Evangelistic Rally Sunday 7:45 p. m.

Tuesday 7:45 p. m. Preaching and devotional.

Wednesday evening prayer and praise service in small auditorium.

Thursday 7:45 p. m. Orchestra practice led by Ray Peart. Anyone playing in instrument is invited.

Friday 7:45 p. m. Special feature service especially for Young People.

Saturday afternoon 2:30 Children's Church. Ages 5-12. Led by Mrs. Annie Lee Broiles. The children lead the singing and do the preaching. Parents invited.

All welcome to all public services.

Rev. Luther G. Broiles and wife, Ministers in charge.

St. James Church

(Episcopal)
Rev. Hale B. Eubanks, Priest in charge
200 West Front St. Telephone 152-L

The fourteenth annual sessions of our Diocesan Summer School will meet at Gearhart on July 16 to 26.

The school will open at 2 p. m. on Monday, July 15th, for registration, and close with lunch on Friday, July 26th.

There will be no services held in St. James Church on Sunday, July 21st and Sunday, July 28th, owing to the summer school.

Christian Science Society

Sunday School at 9:30 a. m.
Sunday Service at 11 a. m.
Subject for next Sunday, "Life."
Wednesday evening meeting at 8 o'clock.

Free public Reading Room open in Church Building every Tuesday and Saturday afternoons from two to four.

Church of God

Walter Larue Shrock, minister
Sunday school at 10 a. m. The International Committee's improved, uniform lessons are used, with the exception of the primary class which uses special graded lessons. July introduces the second half of the six months' course on the prophetic teaching and leadership of Judah.

The morning general service is at 11 o'clock. The evening general service is at 7:45.

Midweek service is on Thursday evening at 7:45.

You ought to be going somewhere to church. Our latch-string is always out.

Easily Remembered

Undoubtedly, the big woman with the rather fierce expression who was waiting outside the stage manager's private office was in a very bad temper.

"Please, sir," began the boy who had taken her message into the manager. "Mrs. Tempesty has called and wants to know why you haven't written to her since the audition she had."

"Tell her," interrupted the busy manager, "that she simply didn't come up to scratch."

A few minutes later the boy returned to the office once again.

"She says she has now!" was his ominous message.—Pittsburgh Sun-Telegraph.

Intelligent Locusts

The locusts are the only living beings that "have made the world safe for democracy." They are the only one who have actually learned the secret of co-operation. They have absolutely no overhead charges. They do not have to support a king, nor pay a horde of professional politicians and government officials to manage them, while they themselves do the work. By some masterly system of "get-together" they perfect an excellent organization without leadership, and without internal dissension. That is more than any collection of human beings has ever been able to accomplish.

Gentility Left Off

Mrs. Goldman had recently engaged a new maid. She was a thoroughly good girl, truthful, honest, very willing and obliging, but she lacked tact. One evening, when her mistress was going out to dinner and the theater afterwards, the maid noticed that a rope of pearls was missing.

"Oh, madam," she cried, "where are your lovely pearls tonight?"

"I'm not wearing them, Winnie," replied Mrs. Goldman. "I don't fancy them tonight."

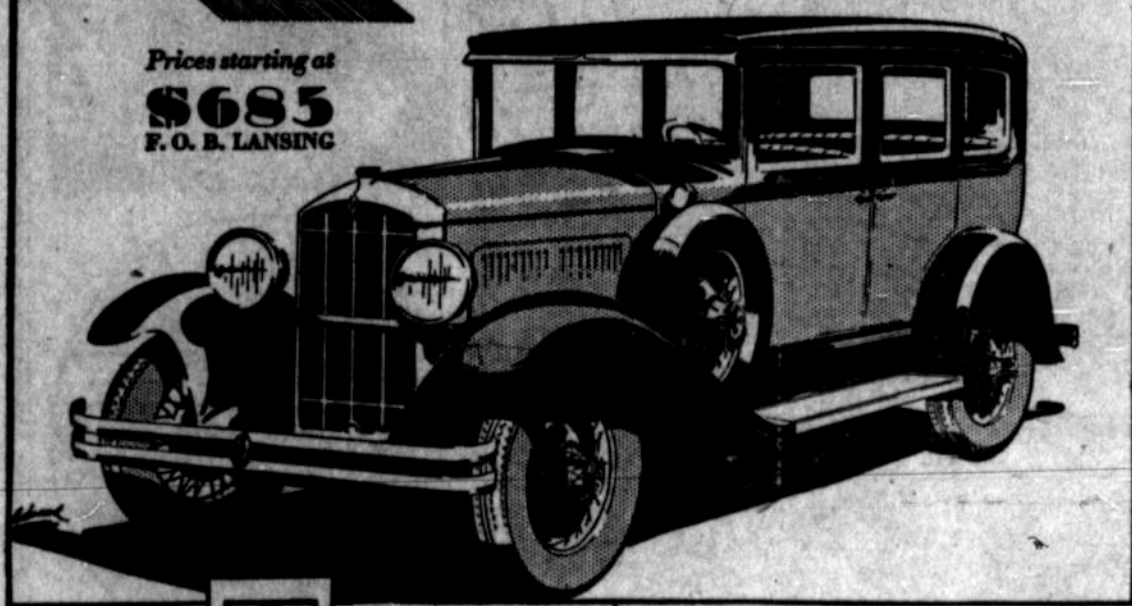

"Oh, what a pity, ma'am!" exclaimed the new maid wistfully. "An' they make you look so like a real lady!"
