

LIBERTY THEATRE

Sunday and Monday, Jan. 5 and 6

Dolores Del Rio as
in

"EVANGELINE"

Henry Wadsworth Longfellow's immortal love epic. A drama of injustice and oppression and how a loyal heart kept faith. A picturesque page of history revealing a stirring tragedy and a romance that smiled through tears. Based on an actual happening of the early history of America. More than 10,000 people are in the play.

Matinee Sunday at 2:00 p. m. Adm. 35c, Child 10c

At Night 7:00 & 9:00 p. m.

Tuesday and Wednesday, Bob Steele in "THE AMAZING VAGABOND." Stunt after stunt to take your breath away. Also the final and last chapter of "TARZAN THE MIGHTY."

Thursday, Ladies Golden Pheasant China Night Gertrude Olmstead and Hugh Trevor in "HEY RUBE!" The tented show that entertains the small town and "takes" the sucker.

Friday and Saturday, Double Feature Days, Wally Wales in "WHITE PEBBLES." Thrills, laughs and excitement in a mystery drama. Also Lili Damita in "FORBIDDEN LOVE." A dramatic picture vibrant with action, thrills and deep appeal.

Every feature a silent Knight that talks for itself—the peak of entertainment where you can rest and relax. Miss Lucile Lore presenting a beautiful score at the organ.

How to
Raise
PoultryBy Dr. L. D. LeGear, V. S.
St. Louis, Mo.

Dr. LeGear is a graduate of the Ontario Veterinary College, 1892. Thirty-six years of veterinary practice on diseases of live stock and poultry. Extensive authority on poultry and stock raising. Nationally known poultry breeder. Member author and lecturer.

ARTICLE XXV

BEATING THE HEN

AT HER OWN GAME

Incubators When Properly Handled Provide Many Advantages While Improper Handling May Cause Serious Loss; Adequate Methods Are, Therefore, Extremely Important

Because an incubator is of a more or less mechanical nature, there is undoubtedly a temptation to treat it as if it were almost entirely automatic in its action. A good incubator will accomplish much with astonishingly little attention, but it must have a reasonable amount of the right kind of care if the best possible results are to be obtained. Quite often I have seen an incubator condemned as a failure when the operator was really at fault. Proper attention is just as essential in the artificial incubation of eggs as it is in any other mechanical operation. I shall, therefore, give a few pointers which I hope may show at least a few of my readers how to get better results than they have been able to obtain heretofore.

First of all, I want to say a word to those who have not yet incubators but expect to do so. Above all things, don't select your first machine with price as the principal consideration. Poor construction almost always goes hand in hand with a too cheap price and the first saving is soon lost many times over.

Secondly, I advise getting a machine that is plenty large enough for present needs and those of the immediate future. One big machine is cheaper to run and gives better results than two small ones. When making your purchase, therefore, take future needs into consideration. Of course, it would be foolish to buy a machine out of all proportion to your needs.

I have no special preference as to the brand of incubators, nor do I consider that it makes any difference in results, whether the hot air or hot water type is used. Either, if properly tended, will prove entirely satisfactory.

Caring for the incubator is not a hard task, but it does require attention to details, good common sense and judgment. The machine should be visited at least three times a day to be sure that whatever sources of heat may be used is functioning properly, that temperature remains constant and that conditions generally are as recommended by the manufacturer.

Large hatcheries usually have specially constructed houses or cellars for their incubators. Smaller operators cannot afford the expense of constructing such quarters, and, indeed, do not require them. An incubator should, however, be placed in the most favorable position possible to secure best results. The room or cellar used should be well ventilated, but free from draughts, should be so arranged that temperature can be kept even at all times, and must have a goodly amount of moisture. The temperature where incubators are op-

erating should never fall below 40 degrees; between 50 and 70 degrees is good, and an unvarying temperature of 60 degrees is ideal.

Incubators should never be operated in a room where there are odors of gases such as come from oils, vegetables or decaying matter, nor dust nor dirt of any kind should be permitted. Baby chicks should never be brooded in an incubator room or cellar. The shells of eggs are porous and their contents would rapidly absorb odors with harmful results.

An incubator must be absolutely level to secure even distribution of heat within. Eye judgment should not be trusted. Use a spirit level and be sure to secure a level in all directions—not merely from front to back or from side to side.

When all details of installation are completed, a good dip and disinfectant should be sprayed into every portion of the inside of the machine to kill all disease germs. Then the machine should be closed up and operated for a day or two at about 102½ degrees before eggs are placed in it. The next step is to get the temperature up to the point recommended by the manufacturer and regulate the thermostat so it will keep the temperature constant.

Any incubator will be accompanied by detailed instructions for operating, maintaining heat, regulating the source of heat, what heat and moisture to maintain at various stages, and all other details of operation. It is not necessary, therefore, to give minute instructions to these points. I receive hundreds of letters from people all over the United States asking how they should operate their incubators. My answer is always the same, "Follow the manufacturer's instructions closely and you will be successful." The manufacturers of each machine should know more about the minute details of operating their machines than I do, therefore, their directions should be followed closely in every detail.

An incubator is a real convenience and a wonderful time saver when properly operated. One attendant will consume no more time caring for an incubator containing 2,000 eggs than would be necessary to give adequate attention to a dozen hens. On the other hand, because individual hatches are quite large, carelessness or lack of proper understanding may cause material losses. It is easy to see, therefore, why the manufacturer's instructions should be carefully followed in every detail.

Irwin Randleman

Irwin Randleman, of Bandon, son of Mr. and Mrs. Birdie Randleman who were formerly residents of Myrtle Point, passed away Monday at his home in Bandon. Irwin was taken ill the Friday previous with appendicitis, and though doctors from Bandon and a specialist from Portland, gave him all the attention possible, it was to no avail.

Irwin was seventeen years of age and an only child. He was in the Junior class in high school, had been prominent in athletics as he was a fine husky specimen of young manhood. He was assistant scout master, and had gone as far in the scout work as one could go at his age. He was a member of the band, as is also his father.

Services were held Sunday afternoon at two o'clock in the chapel, Grant Carrick of Myrtle Point officiating. The body was laid to rest in the Knights of Pythias cemetery.—M. P. Herald.

J. C. PENNEY COMPANY INC.

332 First Street, Coquille, Oregon

WINTER WHITE GOODS

Piles of snowy sheets and cases, dozens and dozens of towels, bolts of muslin and yard goods . . . our January White Goods Event opens with complete, fresh stocks of many household needfuls . . . all of them at typical J. C. Penney low prices.

DIMITY CHECKS

An important value for
January White Week—
a yard—

23c

There are so many uses for this dainty cotton fabric . . . baby's wee things, underwear, pretty little aprons and other things.

OUTING FLANNEL

Our own "PENCO," the
standard of quality,
priced, a yard—

23c

A fine, heavy quality outing flannel, 36 inches wide, which comes in attractive fancy stripe or check patterns.

SIX CYLINDER
SENTENCES

By DR. JOHN W. HOLLAND

O-O

The go-getters are the go-righters.
The ambition to excel is life's most excellent ambition.
If your brain is not used it will crave to be amused.
A man has not yet lived who could hide his meanness by running to cover.
The greatest personal shame is the inability to blush at shame.
Prayer in private is intended to make one fair in public.
