

# CITY GAS

from Standard Oil Wells now ready

## FOR COUNTRY HOMES

Ask about this new STANDARD OIL COMPANY GAS SERVICE—no gas mains needed—hot water—gas Refrigeration—quick cooking—anywhere.

Families living in rural communities as well as those in the cities can now have GAS for cooking and heating—a revolutionary contribution to rural life which the Standard Oil Company of California is making possible through STANDARD FLAMO CITY GAS SERVICE FOR COUNTRY HOMES.

Families in the cities—with every kind of commercial fuel to choose from—use gas because it is quick, clean, safe and economical. Rural families are now being given an equal opportunity to have modern gas ranges, quick-heating gas plates, water heaters, lights, gas refrigerators and individual room heaters—economically!

This unprecedented new gas service does not require the laying of gas mains. Your home installation for complete gas service can be made immediately. A simple gas-pipe connection between your kitchen gas stove and a steel container, housed out of doors in a locked metal cabinet is all there is to it!

### ARTICLE XLII COCCIDIOSIS CAN BE CONQUERED

Strictly Enforced Sanitary Measures and Milk the Most Potent Force for Combatting This Serious Disease.

"No matter how you slice it, it's boloney," runs the refrain of a song recently popular, and no matter how you pronounce it, Coccidiosis is still the same menace to the health of your growing chicks. It might help some, so far as pronunciation is concerned to adopt the suggestion of one writer and call the disease "Coxy." It will require something more drastic than a change of name, however, to stamp out this disease if it once gets a start in your flock.

"Coxy" is one of the most widely spread and fatal diseases of baby chicks there is at the present time. Baby chicks from three to eight weeks are the ones that usually have the disease. It often runs a rapid course and may kill a large percentage of a flock in a short time. Many chicks that survive are permanently affected, stunted in growth and of little value.

The disease is caused by tiny parasites which during a certain stage in their development bury themselves in the intestinal walls of infected chicks. The irritation and damage to the intestines cause the chicks to become droopy and dispirited; their fathers appear ruffled and dull; they huddle together, lose interest in food and sometimes cease eating altogether. They grow light, walk unsteadily and the droppings are frequently, but not always, tinged with blood.

If chicks showing such symptoms really have coccidiosis, a post mortem examination of the blind guts will usually reveal them considerably enlarged and full of a bloody material of cheesy consistency.

While the disease is most common among chicks, it is sometimes contracted in chronic form by older birds usually from four to eight months old. In such cases, it develops slowly and may affect only a few fowls. The symptoms of chronic coccidiosis are much like those caused by worms, lice and other parasites or by nutritional diseases.

If the disease is found in your flock, immediate steps should be taken to conquer it. A milk diet and sanitation and isolation of infected birds are your most effective weapons. Then keep an untiring campaign of sanitation. Your advantage lies in the fact that germs are expelled with the

dropping during their inactive period and must develop outside the body which requires about 4 days' time. Droppings should be removed from the chicken houses every day, and the yards swept and cleaned every 3 or 4 days. All feeding and drinking vessels should be protected so that chicks cannot roost above them and defoul them with droppings. Where chicks can be raised on wire floors such as is seen in battery brooders this disease is seldom seen.

It is also a good idea to cover the floors of the houses where infected chicks are kept with several layers of paper. Remove one layer each day and burn it. Spray every nook and cranny of every house with a strong dip and disinfectant solution often and allow no one who has been working among the diseased chicks to go among healthy ones until their shoes have been disinfected.

Lactose in milk is deadly to the tiny parasites that cause the disease. Remove all water and either give the chicks all the fresh buttermilk, semi-solid buttermilk or fresh clabber milk they will drink in clean vessels or mix from 20 to 40 per cent powdered milk in mash feed which contains no meat scraps and let them eat all of it they will. Give plenty of green food and feed lightly of grain for a few days.

After all trace of the disease has vanished, which should take from one to two weeks, gradually reduce the amount of milk and increase the mash and grain until normal feedings is resumed. Do not make the mistake of thinking that a milk diet alone will give results. The most important part of your campaign is the sanitary measures and these should be continued after the disease has run its course. With the right kind of feeding and sanitation, Coccidiosis can be conquered.

### RELIEF FROM CURSE OF CONSTIPATION

A Battle Creek physician says, "Constipation is responsible for more misery than any other cause." But immediate relief has been found. A tablet called Rexall Orderlies has been discovered. This tablet attracts water from the system into the lazy, dry, evacuating bowel called the colon. The water loosens the dry food waste and causes a gentle, thorough natural movement without forming a habit or ever increasing the dose.

Stop suffering from constipation. Chew a Rexall Orderlie at night. Next day bright. Get 24 for 25c today at the nearest Rexall Drug Store, Fahrman's Pharmacy.

### NOTICE
