

A Profitable Combination

The McCormick-Deering MILKER and Cream Separator

Cuts Milking Costs in Half

Puts Any Herd on a Better-Paying Basis

THE new McCormick-Deering Milker eliminates the drudgery of hand milking—cuts milking costs in half, and provides extra hours each day for other profitable work. Ruggedly built and correctly designed, it is easy to operate, and easy to clean. It is positive in performance regardless of climatic conditions.

This new milker and the famous, easy-running McCormick-Deering Bell-Bearing Cream Separator make an unbeatable combination with which to produce cleaner milk and more butter fat at lower cost. Both of these units have many exclusive features which assure the highest operating efficiency. High-grade materials are used in their construction to provide for years of satisfactory service. The McCormick-Deering Cream Separator and the new Milker are ready to prove their many fine qualities to any man with a herd of cows.

We shall be glad to demonstrate one or both of these time and money-saving machines on your farm.

For County Surveyor

To the Voters and Taxpayers of Coos County:

I have been your County Surveyor for the past seven years and as your servant I have tried to be faithful to my trust. The average monthly pay I have received during this time has been \$67.40, (sixty-seven dollars and forty cents), per month. This has been taken from the records on file in the County Clerk's office by the County Bookkeeper.

During this time I have furnished Coos County the use of instruments of the value of over One Thousand Dollars and have had no pay for the use of them, realizing that in the greater expense to the county for rental of instruments, that my taxes and yours would also be more. Since last summer I have done the engineering work on the county roads and gateway roads, doing my own platting and office work.

Do you believe in cutting down expense? I do.

E. H. Kern, County Surveyor
Registered Civil Engineer, License No. 843.
