Your warrants, county or school district, will be accepted at Schroeder's Jewelry store for either merchandise or repair work—at par.

E. H. Kern brought in yesterday a six-foot casting rod which he had made of yew wood, and which looks to be more serviceable than any of the machine-made rods. It was splendidly wrapped and had the appearance of a rod that would last a fisherman a lifetime. He hopes to establish a home industry along that line.

Very nice entertainment was furnished the Lions Club yesterday noon by Louis Donaldson and Orval Bailey on the harmonica and banjo. It inspired one Lion to remark that he "wished Dave Racleff would take a few lessons and learn what music sounds like!"

Geo. Belloni, chairman of the Civic committee, reported on the need of two young people in Coquille for glasses and Mrs. Lela Elrod, county health nurse, was asked to have the eyes of the young people fitted and present the bill to the club.

Jos. Sayre and J. E. Axtell reported the action of the Lions' Boy Scout troop committee, which this week disbanded the local troop. Dissatisfaction with the actions of a few of the Scouts, and the inability to do any real scouting work where the disturbing element existed, was the cause given for the withdrawal of the scout masters from their positions and the temporary disbanding of the Scouts.

TINTING SIGNS

**Hatchability of Eggs**

**Is Influenced by Feed**

Because proper sorts of feed for the poultry flock influence the hatchability of eggs, some hatcheries in Ohio pay premiums to poultrymen whose eggs hatch the most chicks, according to R. E. Cray, extension specialist in poultry husbandry for the Ohio State university.

Hatchability of eggs depends in part upon three factors which are under the control of all poultrymen. More fertile eggs are obtained from flocks fed a green food, milk, and supplied vitamin D, says Cray.

Green food may be supplied either in the form of alfalfa or soy bean hay, or by adding alfalfa leaf meal to the dry laying mash.

Feeding both milk and green food sometimes increases the proportion of eggs that hatch as much as 10 or 12 per cent. Feeding one and not the other increases hatchability slightly.

Vitamin D may be supplied either in cod liver oil or by submitting the flock to direct rays from the sun on a winter range. Fed even to birds on the range, cod liver oil beneficially affects hatchability.

**Choosing Breeders**

Vigor and health are more important than all else in selecting a turkey breeding flock. Vigorous, fast growing, early maturing, blocky young toms are preferred for breeding. Young hens are preferred to old ones because they generally lay earlier and lay more eggs, except in the case of specially selected layers. Cod liver oil fed to the turkey breeding flock insures health, shell texture and higher hatchability and livability of the poult, according to the Nebraska Agricultural college. A good laying mash kept before the hens at all times will stimulate earlier laying as well as greater production. Boxes about 30 inches square or barrels laid on the side make suitable nests. Brush piled over these makes them more tempting to the hens. Seven or eight nests should be enough for 30 hens, adds the college.
