"Birth of a Baby"
 Film Opens At Liberty Sunday - 4 Days

Essence of Life Drama in The Picture—It Avoids Lecture Platform Story Technique

The significant and natural phenomenon of birth is the subject chosen by the American Committee on Maternal Welfare, Inc. for tender and reverential picturization in the full-length feature film, "The Birth of a Baby," which will open Monday for four days, at the Liberty Theatre.

In offering this widely discussed picture to the public, the American Committee is primarily concerned with putting an end to the tip-toe attitude on child birth that has been partly responsible for the American mortality rate—one of the highest in the civilized world.

At the outset of production the Committee decided against a dry-as-dust technical presentation that would interest only medical groups. If the film was to gain currency and achieve its objective, it must preserve, above all, the essential drama of the phenomenon; and it must state its story in entertaining terms comprehensible to everyone.

It was decided, further, that the finished film must be above reproach from the physician's viewpoint, in order that it might have the fullest support from the profession.

To this end, a committee of gynecologists and obstetricians worked with the producer, Jack H. Skirball, and the director, A. E. Christie, for three months.

As a result, physicians are converted to the cinema as a medium of public education. They voted almost unanimously in this direction at the American Medical Association con-

vention in Atlantic City, where the film had its preview before an audience of 4,000 persons—physicians, their families and nurses.

The dramatic high spot of the picture is, of course, its epic climax, the actual birth of a child. But no climax is worthy of the term if proper motivation and dramatic suspense have not been sustained. The practical motion picture men saw to that, and the most compelling of their efforts is the recording on the sound track of the heart beat of the unborn child.

This was achieved by shielding a microphone with a wood mask into which had been set the earpieces of a stethoscope. The other end of the instrument picked up the beats, a succession of palpitations, regular in their irregularity, that hold the listener breathless, wondering whether this tiny organ will succeed in beating its next measure.

That it does continue beating its way into the world is absorbingly portrayed in the delivery scene, scene, filmed by a camera crew of eighteen, clothed in gowns, masks and caps, although they were separated from the actual delivery room by a glass wall.

With the doctor working so as not to obstruct the camera's field of vision, the lens follows the process and records the first instinctive effort of the infant in this strange, new world—a reaching heavenward of its tiny arm as the travail of its mother sends it forth, at last, to a life of its own.
