4-H'ers Help Produce More Milk; You Drank 246 Qts. Last Year

You and every other civilian in America drank an average of 246 quarts of milk last year for a national total of roundly 36½ billion quarts. This volume, which would fill a row of quart bottles 264 feet wide that would reach from New York City to San Francisco, and thence to Los Angeles, is over 4 billion quarts more milk than the nation's population drank during an average year in the 1935-1939 period.

Contributing immeasurably to the boost in milk production that made this increased consumption possible were approximately 85,000 rural boys and girls participating in 4-H dairy animal projects.

For their outstanding achievements in the national 4-H dairy production activity, 398 of the youthful dairymen and maids in 41 states received medals of honor from the Kraft Cheese Company for having top records in their counties; 171 comprising blue award groups in 28 states were rewarded with \$25 War Bonds; ten sectional representatives were given trips to the National 4-H Club Congress in Chicago, and five recipients of national honors each received a \$200 college scholarship.

By helping to increase milk production, the 4-H'ers also made a direct contribution to the welfare of our armed forces, every man in which needs at least 200 quarts of milk annually.

Among the 4-H'ers name in the 1943 State blue award in Oregon was Ralph Cope, Jr., Langlois.

Nine Children, Under 12 Years, Killed in Oregon in Two Months

Nine children under 12 years of age were killed in traffic accidents in Oregon during the first six weeks of 1944, Secretary of State Bob Farrell disclosed today. He said fatalities in this age group amounted to 24 per cent of all traffic deaths reported in the state during the first six weeks of this year.

Of the nine child fatalities, four involved children struck as they dashed out into the street or road in the path of approaching vehicles; three involved children struck while riding bicycles and two were killed while riding in cars involved in accidents.

"The high proportion of child fatalities in traffic so far this year is greatly in excess of the normal ratio," Farrell declared. "It is too early to call this a trend, but the experience truly is alarming."

"Milk does more for the body than any other food and does it more cheaply." That statement by the Bureau of Home Economics of the U. S. Department of Agriculture is forcefully illustrated in this National Dairy Council chart showing the high percentage of each of the daily food elements which are provided by a quart of milk and the other foods necessary to complete daily dietary requirements.

The average cost of a quart of milk delivered to the home in the United States is 15.1 cents. The average cost of other foods needed to complete an economical diet and provide the balance of the nutrients needed daily is about 44 cents. Rising food costs together with the necessity of maintaining the best possible wartime diets are now giving added emphasis to the economy of milk.

The foods making up the meals used as a basis for this chart are as follows: Breakfast: fruit, whole-grain cereal with milk and sugar, whole-wheat toast with butter, milk, and coffee with cream and sugar. Lunch: macaroni with tomato sauce, whole-wheat bread with butter, fresh apple, oatmeal cookies and milk. Dinner: meat stew with vegetables, cole slaw, whole-wheat bread with butter and jam, coffee with cream and sugar, junket and milk.
