Work in M. M. Visitors Welcome

IN CHECKING figures of the Farm Credit Administration, I find that farmers are paying off mortgages faster than at any other period in the history of the Federal Land Bank.

eral Land Bank.

At the same time, farmers are building up cash reserves, but the wise investment of this money is an extremely hard job for farmers to undertake. The temptation is to try and obtain as high an interest rate as possible.

Many of us see no reason why we should not get as much interest on our money now as we had to pay the bank when we were forced to borrow during the depression.

forced to borrow during the depression.

The answer is that today money is cheap—"expanded", as the bankers express it. Therefore interest rates are low except in very speculative securities. Naturally no farmer wants to risk losing his hard earned cash.

We farmers know our own business and we can invest money in it safely because we understand it. However, when we branch off

24 - 25 - 26

into other fields, especially thighly technical field of invenents, most of us encounter a

experiences.

In these days it is virtually impossible for farmers to put their surplus cash back into the farm. War-time conditions prevent us from repairing bulldings, and buying new machinery, automobiles, trucks and other equipment we must eventually have if we are going to stay in business.

So the smart thing for farmers to do is to invest their surplus money in War Bonds where it is as safe as a dollar bill. These bonds increase in value the longer they are held; they can be eashed after sixty days in case of need, and they will provide a reserve for investment after the war in the business the farmers know best—the business of farming.

I confidently predict that if farmers will do this, the dawn of peace will signalize a new day for agriculture.
