

Dodge To Display New Truck

A completely new line of Dodge "Job-Rated" trucks comprising 248 basic chassis models ranging from 4250 to 23,000 pounds gross vehicle weight and up to 40,000 pounds gross train weight was announced today by L. F. VanNortwick, Director of Truck Sales of the Dodge Division, Chrysler Corporation.

Some models of the new trucks will be displayed starting January 7 by Steinmetz Motors in Coquille.

A combination of massive strength and smoothly flowing lines is the keynote of styling for the new trucks. They were designed to combine appearance with comfort, safety, performance, economy and ease of handling.

Front axle have been moved back and engines have been moved forward to place more of the gross vehicle weight on the front axle and provide better weight distribution. The wheelbase for conventional models through the 2-ton has been reduced eight inches, while the 2½ and 3-ton models have been reduced six inches. The new trucks have been engineered so that despite the shorter wheelbase, the cab-to-axle dimensions remain practically unchanged, making it possible to use the same length bodies as before.

New ease of handling and driving has been provided by the shorter wheelbase and wider tread front axle, together with cross steering, which is a new feature on all conventional cab models. The cross steering permits a 37-degree turning angle both right and left. Road shock through the steering permits a 37-degree turning angle both right and left. Drivers now can park or back into alleys or up to loading platforms with much greater ease. Road shock through the steering wheel is greatly reduced by the cross steering, which has the drag link running parallel with the front axle.

Standard, de luxe and custom cabs provide more room, more visibility, more safety, and more comfort for the driver.

The seat cushion utilizes air in combination with coil springs to provide comfort. A hand control allows the driver to adjust cushion buoyancy to his weight or road conditions.

De luxe and custom cabs have what is termed "360-degree vision" through increased glass area and installation of rear quarter windows. Windshields and windows of the new "Pilot-House" cabs are higher and wider, adding to vision and safety. Drivers can enter or leave the conventional cab easily from either side since the gear shift and emergency brake levers have been moved forward to give clear floor space from door to door.

Dodge has seven different engines to handle the power requirements of its new line. Numerous engine improvements have been made.

Braking systems are larger and improved. Front and rear axles have

increased load-carrying capacity. Front springs are longer. Radiator cores have been redesigned to facilitate better cooling. Exceptional improvements have been made in frame construction.

Watch Your Kidneys!
Help Them Cleanse the Blood of Harmful Body Waste
Your kidneys are constantly filtering waste matter from the blood stream. But kidneys sometimes lag in their work—do not act as Nature intended—fall to remove impurities that, if retained, may poison the system and upset the whole body machinery.
Symptoms may be nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, painness under the eyes—feeling of nervous anxiety and loss of pep and strength.
Other signs of kidney or bladder disorder are occasional burning, scanty or too frequent urination.
There should be no doubt that prompt treatment is wiser than neglect. Dr. J. C. Doe's Pills, Doe's have been winning new friends for more than forty years. They have a nation-wide reputation. Are recommended by grateful people the country over. Ask your neighbor!
