**How To
Develop
Good Teeth**

YOUR teeth need exercise daily. By masticating the hard and rougher sort of food they can best be kept in condition. Hard crusts and other coarse and fibrous foods which require thorough chewing before they can be swallowed, are especially good, and only for children, but for adults also. It helps to produce a good circulation of blood and in children develops the muscles and expands the jaws, so that room is provided for the incoming larger teeth. Children should be allowed to eat only at regular hours. A child should be taught to chew his food very thoroughly.

Proper training and care of the teeth in childhood establish habits they will appreciate in after years. A few minutes' labor with the tooth-brush each morning and night—a visit to a good dentist at intervals—will save lots of unnecessary pain and avoid poor health which will surely follow neglect of the mouth and teeth.

Catarhal Deafness Cannot Be Cured
by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure catarhal deafness, and that is by a constitutional remedy. Catarhal Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, deafness is the result. Unless the inflammation can be reduced and this tube restored to its normal condition, hearing will be destroyed forever. Many cases of deafness are caused by catarrh, which is an inflamed condition of the mucous surfaces. Hall's Catarrh Medicine acts thru the blood on the mucous surfaces of the system.

We will give One Hundred Dollars for any case of Catarhal Deafness that cannot be cured by Hall's Catarrh Medicine. Circulars free. All Druggists, etc.
