High Ideals on the Farm.

"Higher ideals in agricultural life will not injure any one, but will lead strength to any cause of public interest that we may champion." These concluding words by N. E. Cook in the Tribune Farmer nearly a year ago are worthy of study by those engaged in agricultural pursuits throughout the length and breadth of the land. Nowadays we hear much of the abandonment of the farm by the younger generation and how to keep the boys on the farm. Surely to attain this object there can be no surer or better way than through the higher ideals in agricultural life. Though the first duty of the farmer is the care and culture of his farm, yet while toiling thus, and all honest toil is good, he must diversify his work. As in study, it is well to have variety of studies at one time to preserve the elasticity of the mind and prevent a centering of thoughts entirely on one subject, which has the effect of weakening rather than strengthening, so the farmer must bring more variety into his life, nurture the garden of the mind, cultivate the ideal, bring to his home the best journals and books, which are now within the reach of all. Let there be less of the monotonous drudgery on the farm. Beautify the home and give some thought to the science of agriculture.

If all the readers of the Tribune Farmer will for a little while give attention and think what this life on the farm really means we will see what higher ideals may be brought into agricultural life and how the tiller of the soil may be broadened out into an ardent student of nature study for.

To the solid ground of nature trusts the mind that builds for ages. If we pause for a little in the daily routine of farm work to consider the broad fields for diversified study possible in agricultural life, we may well wonder at the desire on the part of many to exchange agricultural life for that of the city. It must surely be from want of knowledge of the opportunities for advancement and the realization of higher ideals of the true study of agriculture as the master science.

The master science! That is perhaps an ambitious title, but it is one which may be easily claimed for Agriculture, as she calls into her service a greater number of sciences than any other industry that man can choose—chemistry, botany, physiology, are some of those called into the service of Agriculture; nor is the student limited to strictly scientific lines; he has also the unbounded field of nature spreading out before his mind and eye, new phases of study to interest his mind, to awaken that inner spirit leading men to desire higher ideals in life. These things should not be forgotten in the seeming isolation of farm life. Let those who complain of the monotony of farm work stop to think a little as they work, and they will find there is no monotony in it but that it is work full of interest and variety. The mere routine of ploughing and cultivating the soil may seem uninteresting enough, but consider the purpose of their work, and it at once becomes deeply interesting—the preparation of the soil for the reception of the seed and growth of the plants; the aeration of the soil so that there may be free passage of air for the breathing of the plant roots, and supply of oxygen, to maintain the existence of germs in the soil creating plant food. Here, too, chemistry may come in; chemical analysis can tell what are the constituents of soil, but it cannot tell what the soil may produce; that will depend on its treatment and the action of the seasons.

Follow this line of thought through the life of the plant, from the tiny seed deposited in the seed bed on to the harvested crop. Each week, each month brings variety and change. All around are nature's working food for thought. Mark the bursting of the leaf buds in spring, the falling leaves in autumn, with their ever changing shades of color, caused by the action of the sun and air on the chemical constituent of the leaf, carrying in its fall to earth many elements of ferti-

Respectfully submitted,
R. S. KNOWLTON, Treasurer.

ty to feed the soil that grows those giants of forest. Again, in that other branch of the farmer's work, the breeding of livestock, he can have his higher ideals, seeking after improvement always, and I could not illustrate the possibilities and attractions in this branch of agriculture better than by quoting from the conclusion of Alvin H. Sanders's book, "Shorthorn Cattle," where he pays a high tribute to the breeder's art:

"The sculptor hews from the solid marble images of grace, beauty or strength that provoke the plaudits of the world. His contact with his work is direct. In calling from the stone creatures of his own conception the figures may be shaped at will. A Ahidias or a Canova lifts the veil from his superb handiwork and gains a place in the gallery of immortals. Compared with him who has the power to conceive an ideal animal form and call it into life through a profound knowledge of nature's intricate and hidden laws, the greatest sculptor is a mere mechanic. There is higher form of art than that which deals

with the intelligent manipulation of animal life, the modding, breathing creatures in accordance with the will and purpose of a guiding mind. It rises in its boundless possibilities to heights that are fairly godlike. It sounds the depths of the profoundest mysteries of physical existence, verging on the borders of the infinite itself. The world of human endeavor presents no nobler field of action, no realm of thought demanding a higher order of ability."

Truly, then, this great science of agriculture may well be called the master science, and what other industry can man choose where there is better advantages, for cultivating those higher ideals that elevate man's life?—New York Tribune Farmer.

G. A. Robinson has just received a complete new line of men's negligee overshirts. A nice line of sheet music has just been received by C. E. Barker & Co. Call early and get the best. We wish to call your attention to the fact that we carry the best hams and bacon on the market. Every piece guaranteed, at Land & Lyons'.

Drive Masher Out.
"Mashing" will soon be placed under the official ban, and all individuals who indulge in this sort of pastime will either have to conduct themselves in a proper manner or leave the city.

Councilman George Baker has determined to wage war on this undesirable element, and to make it possible for a woman or girl to walk down the street unattended without being disturbed by the many male flirts who congregate on street corners. He will present an ordinance before the City Council making it a misdemeanor for a man on the street to speak to a woman whom he does not know or to make any attempt to flirt with her. A \$50 fine or the rockpile are provided as penalties. Promise of hearty support from other City Fathers in his war upon the flirts has been given, and it is believed the proposed measure will be passed by the Council without opposition.

"Many young fellows in this city are becoming altogether too bold," said Mr. Baker yesterday. "They congregate in front of cigar stores and street corners and ogle and stare at every woman or girl who passes, in an attempt to flirt with them. At times they boldly speak to women they have never seen before."

"The other night I saw a man approach a little 16-year-old girl and speak to her, and ask her if she would not like to go out and have a good time. The girl had never seen the fellow before, and she was badly frightened. By the time I learned of the girl what had happened and started in search of the man who had insulted her, he had disappeared. Had I succeeded in getting hold of him he would have attempted to make no more mashes in this city."

"It is high time the women and girls of our city were protected from such men, and I hope this ordinance passes. If we catch a few of these smart fellows and secure a conviction, I believe it will teach all mashers a lesson; and that Portland will soon be rid of such men."
