The cooking stove of the Mexicans was a model of cheapness and simplicity. It consisted of an earthen jar or pot, in which was placed charcoal. their universal fuel. Upon this was placed the pot, or jar, they cooked in. of either iron or earthenware, containing the articles to be cooked. Fresh meat can be kept in its natural state in that climate only for a very short time -salt having no effect upon it. It is therefore cut into strips and dried, or "jerked." as we term it, in the sun. Thus prepared, it will keep for an indefinite length of time. In its appearance it is similar to our dried beef, but to an American taste is rather insipid, or, to speak more clearly, leathery. The meat in sufficient quantity is placed in the pot, as is also the vegetables desired. To this is added the native chile pepper, the extreme pungency of which to the uncultivated taste takes away the breath. our best cayenne pepper being as mild lemonade, in comparison. But it seems mild enough to these children

of the sun, and they relish it highly. Each fam ly, and I speak of the poorer classes, have their mill by which is prepared the meal-corn-of which their broad is made, when required, and this is a pattern of that de scribed in Biblical history. It consists of a slab of stones about two feet square. made smooth on the one side and slightly concave from outer edge to center. This is elevated upon stout stone pegs to an angle of about fortyfive degrees. A pie e of hard, finesize of the ordinary rolling-pir in modern use, thick in the mid dle and tapering to the end furnishes the "upper millstone," as i were. The corn to be converted into meal is first seaked in water. The earthen jar containing this is placed alongside of the mill, the female whsupplies the motive power rolls up her sleeves, if she is so encumbered, kneels down in front of the slab, and taking : handful of corn out of the jar, throws it with a deft hand across the surfac of the slab, and then, with a gracefu up and down movement, reduces it with the stone rolling-pin to a paste When this is ground fine enough it taken between the hands and made into thin cakes known as tortillas, and ese are cooked upon a piece of shee iron placed upon the fire. This ap general respects as that used by the Aztecs. Wheat was raised to some extent, and they have mills for preparing it, but the one I have described is the mill of the poor.

The goatskin, pitched inside, als described in the Bible, we found in frequent use as receptacles for water. milk and the fiery mescal, aguardiente toxicants, pulque. The filled goattoxicants, pulque. The filled goat-skin is slung over the shoulders with a high and special technical schools. broad strap, and at the end of one of Hereafter no child will go out into life the fore legs tied with a thong is used from any well-regulated city or large as a spigot to draw off the contents. It takes one some time to get accustioned to the pitchy taste of the contents of these prim tive vessels, yet it was rather a novel experience to take a drink out of one of them. -Pittsburgh will hereafter know form and color as

WORKERS IN MINES.

The Two Great Dangers to Which Coal This mine, while the of the largest, was also one of the most dangerous in the valley. In order to keep the workings supplied with pure air, in quantity sufficient to render harmless the ender sive gases released by opening coal-seams, an immense fun had bee constructed which, during every minute that it was in action, drew forth from the mine over two hundred thousand cubic feet of impure air. Even with this great air-current, there were still very dangerous parts of the mine, in wood-work. Both of these, how-requiring the utmost vigilance from ever, are thus far experimental, so far miners. To hear of some miner or laborer firing the gas in his chamber and being burned thereby was a hope the experiment will be so univer-sally successful as to lead to their thormatter of almost weekly occurrence. In pits of this character, where there is a plentiful air-current, it is often a ough engrafting upon the school system as low down as the upper two classes custom with miners to "fire" the gas in their working-places before a quantity sufficient to render its combustion dangerous accamulates. When this is done, the gas will take fire with a noise not unlike that made in lighting a common gas-jet. There is such an excess of air that the explosion of the gas is very weak and harmless. The flame, often three or seat when an organ-grinder posted four feet deep, will travel along the himself under the window. Sandeau, uneven roof, showing beautiful colors who was very nervous, threw him a varying from a deep, dark blue to a half-franc piece and begged him begone. brilliant crimson; and in it shine stars Augier considered thise a bad way of of dazzling white light, showing that fine particles of coal-dust suspended in the air are burning in the great heat of the gas. Sometimes this fiame will played before his house. Augier open-

to and fro, several times, until all the gas has been burned away. gas has been burned away. When the flame dies out, the burn gases (the "black" or "after-damp"). being heavier than the air, fall to the loor. So the coal miner is ever exposed to two great dangers: the first, that of being burned; the second, that played again before his house. The of being suffocated after he has escaped the fire. -Roy Mc Tavish, in St. other organ-grinders, until all had noted the number of his house.

# A Curious Marine Monster.

Not long ago a curious marine monster was captured near Tampico. For several days a school of unknown creatures were seen disporting in the gulf, a short distance from the shore; but all efforts to capture any of them proved futile, till one was caught by accident in a fishing seine. Ropes were then night, and the citizen jokingly said: thrawn around the struggling monster, and by the aid of horses it was dragged to land. It was a cephaleptera vampyrus, also known as the "devil fish." or ocean vampire. It measured fifteen feet long and seventeen feet wide from the edges of the pectoral fins, and its followed by shouts for help. A chamber mouth was five feet across.—City of window was thrown up and a head

HOW TO MAKE JELLIES.

Helps and Hints for Young and Inexperenced Housekeepers.

In no part of the preserving does the inexperienced housewife have as many discouraging failures as in the making of jelly. She follows the rule explicitly given her by a woman who is famous for making clear, firm jelly, but even then does not succeed, and she wonders why it is. The experienced housewife comforts her with: "I had just such a time when I first undertook needs just so much practice." This is thought were more delightful than his books. How pathetic and solemn is the glimpse we have of the stek man in the glimpse we have gl the following, written to his friend, away enough of time, labor, etc., she with large cheek bones. BISMAROK'S WIFE.

Appearance and Character of the German A friend who, during a visit to Homburg, has met and frequently dined with Bismarck's wife, kindly sends me an interesting description of her. Princess Bismarck, who alone enjoys the privilege of telling the master of Europe that he needs to change his collar or to be more careful about his personal appearance in general, was originally Fraulein Von Puttkamer, a member of a noble Pomeranian family, and she is a most interesting woman. although probably not one in a thousand readers has ever heard any thing what a character of Dickens desc ibes as "a fine figure of a woman," inclined ance with the people at Homburg and Frankfort d tes from the time long ago, wher Bismarck, not in the least a great man then, was simply an offtrue, and whom she goes every year to

Wherever Mrs. Bismarck is she rules. When she enters a house every window must be closed tight, and no door can remain needlessly open, as she shares with the French their morbid dread of currents of air. At the table she is music and discusses it learnedly, although she really knows very little about it. This causes many wordy portant days. The Baroness is old, and. like most Rothschilds, not remarkable knows something about music, writer deal. She plays and sings her own work, and she and the Princess Bis-
