THE CANYONVILLE SHOOTING.

At the preliminary examination of Mrs. Booth for the shooting of Samuel Booth she was discharged. Both are recovering. The Review says: Deputy Sheriff Dillard arrested Mrs. W. S. Booth near Glendale, Thursday, for shooting and fatally wounding Samuel Booth (her husband's uncle) the day before. Evidently the story told by the old man and published in the Review last week was considerably colored. The examination was held before Justice Wertz at Glendale Friday, and the only testimony was that of Mrs. Booth, who did the shooting, and the wounded man. Two little children witnessed the affair, but were too young to give any information. Mrs. Booth claimed that the old man was very "cranky" and that he insisted on making a big fire in the house on the day previous to the shooting, although the weather was very warm. They got angry about it, and finally both piled wood into the fireplace till the heat made the house untenable and all the wood on hand was burned up. The next day he wanted to repeat the performance but she objected and ordered him to keep out of the house. He started for the house with a club when she called a shotgun, which he knocked out of her hands with the club. Then she got the Winchester rifle and told him to stay out of the house or she would kill him. He then attempted to fasten the door from the outside and shut her in. The old man was pressing against the door with his shoulder when she fired through the door from the inside the shot which wounded him. Mrs. Booth claims that she intended only to frighten him and that she thought the bullet would go above him. Both admitted the truth of some of her testimony on being closely examined, especially that relating to his having a club.

FALSE CLAIM EXPOSED.

Where the Price of Plate Glass Fell First. The Downward Course of Prices in France Before We Began to Manufacture—Domestic and Foreign Prices Now. The high tariff papers of the country are at present making a great ado over the plate glass industry, which they claim is a triumph of protection. They are constantly asserting that was not until the industry was established in this country that the prices of plate glass began to fall, and they are very fond of comparing the prices which prevailed from 1870 to 1873 with those at which the glass is sold now. How careful they are not to say anything about the real cause of the former prices which prevailed during the high period. France is the most important center for the industry in Europe, and it is from France that nearly all our imports of plate glass have come. During the Franco-Prussian war all industries were shaken up, and the drain of resources from the war-torn countries caused a great rise in wages. For the same reason the prices of materials rose, which, taken in connection with the heavy taxes and expenses incident to manufacturing industries in war time, caused an abnormal rise in the cost of production, and hence the price of glass. It is just as logical, therefore, to compare the prices of wood during war time and now as it is to compare the prices of plate glass with those ruling in
