Is the sail story of many lives made miser able through no fault of their own. Scrof able through no fault of their own. Scrofula is more especially than any other a hereditary disease, and for this simple reason: Arising from impure and insufficient blood, the disease locates itself in the lymphatics, which are composed of white tissues; there is a period of foetal life when the whole body consists of white tissues, and therefore the unborn child is especially susceptible to this dreadful disease. But there is a remedy for scrofula, whether hereditary or acquired. It is Hood's Sarsaparilla, which by its powerful effect on the blood, expels all trace of the disease and gives to the vital fluid the quality and color of health. If you decide to take Hood's Sarsaparilla do not accept any substitute.

Goeler, a carpenter from Qakland. Cal., who has come to Linkville with his family. They will put a lot of home-made furniture on the market.—Star. ADULTERATIONS IN FOOD.

Many states have stringent laws gainst food adulteration, but they fail The last report of the Dairy Commissioner of New Jersey shows that 43.96 per cent, or nearly half, of all the food preparations submitted to him for examination were adulterated. Sometimes the adulterations were harmless and in these cases the purchaser would be only swindled, but in many instances rank poisons were found in articles of everyday consumption. A large percentage of canned vegetables, such as peas and string beans, were found to contain cop-peras, used to give a green color, and a number of baking powders have been "doctored" with ammonia to give an ar-tificial leavening strength and to permit of their carrying more waste matter. In these cases there is not only fraud but danger to the public health. \* \* \*—N. Y.

The Tomato Season.

The season of the tomato is short, yet being essentially a plant of the tropics, it can not be ripened often in England, except under glass. As a hot house plant, however, it is widely used there, certain varieties developing special adaptation to these conditions. In the short but fervent summer in New England, on the contrary, it finds itself quite at home. Though the plant like many others of tropical origin is highly susceptible to injury from frost, the seeds are very \$87 00 | hardy, sustaining no harm from remaining in the ground throughout winters. If left to come up of themselves they do so freely from such accidental plantings of the previous season, and here in sooner. A large field of tomatoes in the \$294 38 vicinity of Boston commenced ripening

> The Girl Who Teaches. comes of the greatest importance if the room. There not only the physical, but to their utmost. The young graduate fortably at her desk; to stand occasion little; to have constant variety in her work; to enjoy her recess with perfect freedom and in congenial companion-ship. As a teacher she goes to school to stand upon her feet all day long; to use her voice incessantly, perhaps, too, in a large room filled with the tumult of the street: to keep noisy, and very likely. Stylish New Hats street; to keep noisy, and very likely, rebellious and disobedient children not only quiet, but interested, and to spend

the recess in care of them in the halls and the yard. Besides this she is to stimulate their brains, and a certain amount of timeusually prescribed by a board of education, the members of which know little of the capacity and possibilities of the youthful mind-is allotted her, in which she must, somehow or other, succeed in teaching them a certain number of facts -no allowance being made for the slowness, stupidity or disorder, which increases the friction of the work and deplete the education or how enthusiastic the spirit, the power for physical endurance is absolutely necessary.—Caroline B. Le Row in Ladies' Home Journal.

BAILEY—In Ashland, Oct. 4, 1891, to Mr. and Mrs. S. J. Bailey, a daughter.

#### Poison in the Kitchen.

No article entering so generally into the food of every household is so generally and villainously adultered as baking powder. These adulterated powders are shoved upon

the public with the greatest persistency. Throbbing advertisements in newspapers claiming this brand or that is absolutely pure, backed by analyses and certificates, and yet they are adulterated with ammonia or alum. It is to be hoped the law will take hold of these merciless manufacturers and punish them for destroying the stomachs

of the unsuspecting consumer. Amid all this fraud and deceit Dr. Price's Cream Baking Powder stands almost alone battling for pure food and continues to furnish a pure cream of tartar powder at almost the same cost to the people as the ammoina and alum pow-

ders are sold at, yet it costs much more to manufacture. Dr. Price's Cream Baking Powder is of the highest strength. It produces the largest amount of leavening power attainable in a pure baking powder. It is free from ammonia or any other adulteration. No powder does such work. Housewives who have tested all use Dr. Prices only.
