Through vibrations, slow or rapid, of this ether the universal energy acts. It is likely that the science of vibrations will receive greater attention in the immediate future than it has ever done. The vibrations of a univer- rean shows there will be a deficiency of sal ether seem to explain many things. \$30,000 in the appropriation for equip-The question the scientists cannot answer as yet is whether the ether is mat-

Light is caused by vibrations of the ether. These vibrations are called light waves. The distance across from the crest of one of the movements to the next is called a wave length, and it is wonderful discoveries have been made. It is denoted by length of time between two vibrations.

As it recedes the number will be less. As it recedes the number will be less.

This fact and the spectroscope have enabled scientists to distinguish whether the heavenly bedies are receding from the heavenly bodies are receding from or approaching one another. It has been Try it at once. Large bottles only Fifty cents, at Ashland Drug Co. found that the sun and all its planets, earth included, are moving toward the great star Arcturus at the rate of 4 3-10 miles per second. Thus at some very far distant day the people of our earth may experience the sensation of falling into a star many times greater than our sun, if at that time there are any inhabitants left on this little globe.

Nobody knows just what electricity is. It is such a different manifestation of energy from anything hitherto known that the wisest are at sea. The problem immediately before students is to dis- Tien-Tsin. By the end of the month cover what causes positive and negative electric currents. Beyond doubt they

lighting Tesla has discovered that have been sent to Japan. "vacuum tubes become luminous in a properly prepared room with no wires." Tesla has found that wires are not necessary to conduct electricity. "Ere long intelligence, transmitted without wires, will throb through the earth like a pulse through a living organism." The earth started. is one vast storehouse of electric force, and man's next task will be to utilize it. We know hardly the beginning as

yet of the wonders that are to be. The most wasteful and antiquated piece of machinery still employed in this age of invention is the steam engine, in Professor Hering's view. It is by tapping the source of exhaustless power the earth offers us that we shall be able to abolish the hot, noisy and dirty steam engine. It will be abolished when we are able to "hook our machinery to the machinery of nature."

Signor Tanlongo, the Roman banker who was acquitted by a jury of frauds of which he was undoubtedly guilty, has retired to a monastery of Passionist Fathers. There he will devote himself to religion. Signor Tanlongo ought to the banks of the Yalu river. Both sides have done that before he committed the lost heavily. The Japanese were refrauds. But perhaps he then would not | pulsed. have had money enough to give the church so large a thank offering because he got free.
