

KAY & TODD, GOOD MORNING!

DON'T FAIL TO SEE OUR NEW SPRING STOCK, AND GET PRICES BEFORE BUYING.
We have just received our New Stock of Spring Goods, and have reduced the price on all goods on hand, so will sell good stylish

CLOTHING AT

NEWBERG GRAPHIC.

ISSUED EVERY FRIDAY MORNING.

E. H. WOODWARD, EDITOR & PUBLISHER.

FRIDAY, MAY 25, 1901.

Entered as second class matter at the post office at Newberg, Oregon.

O'Connor & Co., of Portland, have been awarded the contract for building the state school for deaf mutes at Salem at a cost of \$16,755.

An Englishman claims to have recently discovered the richest gold mine in the wilds of the California mountains ever found in Oregon. He proposes to form a company of his countrymen and work the claim.

In the whirligig of time singular things are happening. An ex-slave has purchased for \$500 the town site of Cahaba, once the capital of Alabama, and will demolish the old buildings thereon and make a farm of it.—Statesman.

The "Midway" attractions of the world's fair are still on the go. After doing duty at the Midwinter fair they are now on the list for the interstate fair which is to open at Tacoma August 15. The camels and donkeys of Cairo street attract wherever they are exhibited.

Watt Henderson's neighbors who know him best, speak in the highest terms of him as a man and a neighbor and say he has the necessary qualifications for filling the office of sheriff with credit to himself and in the interests of the people of Yamhill county.

The latest scheme for disposing of the surplus horse flesh in this country is one that is being figured on by Portland capitalists who propose to go into the manufacture of fertilizing compounds, in connection with which is to be a glue factory and oil works. They propose to buy up horses at a low figure and work up the carcasses in the factory.

Voters who want to have this part of the county represented on the board of county commissioners will do well to remember that Amos Nelson is a sturdy farmer of West Chehalis, a man of good practical business sense, is out for that important office. A vote for Mr. Nelson is a vote for an honest competent man for county commissioner.

If the voters of Newberg are not posted with reference to the issues of the day so that they will be able to cast their ballots with intelligence on the fourth of June it is no fault of the servants of the dear people. Our town has been visited as never before by political campaigners and still there's more to follow. These with the street corner politicians who change nothing for all the valuable information they impart keep things humming. If no other gain is made it all helps out in a dull time when topics for talk along other lines are scarce.

College Subscription.

A short time ago when considering the outlook for Pacific College from a financial point of view for the next year, the trustees decided to canvass for a subscription made up of 100 or more names, each giving \$10 payable, one half in December next and the other in the following June, toward the running expenses of the college. J. T. Smith who was appointed to call on the friends of the college and solicit subscriptions, has been interviewing the people and has met with very gratifying success. He says he has been pleased to find our citizens so loyal to the college and so willing to do all in their power to assist in pushing it forward to success in spite of financial distress. He has been outside of town but little yet and a number of people in town have not been seen. He will continue the canvass and feels sure that he will get the hundred names. We give below the names of those who have subscribed up to the present date and will add others as they are secured:

B. C. Miles
Joseph Wilson
A. M. Hoskins
Paul Macy

NOTES FROM THE POULTRY KEEPER.

Vigor In The Flock.

One of the causes of deterioration in a flock is the practice of breeding from pullets every season. A season or two may not show any injurious effects, but the constant adherence to the keeping of early pullets and the retirement of the hens is sure to deteriorate the flock in the course of time. Yet a large majority of those who keep poultry sell off the oldest hens (or hens only two years old) only because they are compelled to cease laying in order to shed their feathers, and substitute pullets of that year's hatch in place of the hens. Then there is a practice of changing cocks or eggs with a neighbor, in order to infuse new blood, which is really no new blood at all, as the system is such that all the flocks of each neighborhood are closely allied, and no improvement can be expected. To infuse vigor the fully matured, strongest, and best birds should be used. Never change eggs with a neighbor for breeding purposes, but endeavor to have cockerels from a strain that is from a remote yard, and never breed from very young stock. Young stock may answer for a single season, but vigor is only found in those that are matured.

Guanos and Poultry Manure.

Quite often it has been stated that the droppings from poultry were as valuable as guano, but several analyses of hen manure made at Geneva, New York, Experiment station show from 2.96 to 1.86 per cent of ammonia, from 2.41 to 1.92 per cent of phosphoric acid, and from 1.23 to 1.01 per cent of potash, with moisture ranging from forty to sixty per cent, the latter from fresh droppings. This is a small percentage and does not place a high value on droppings. It may be stated, however, that the value of the droppings depends upon the food given the hens. Guano is deposited by birds that feed upon animal food (fish, etc.), while domestic poultry feed mostly upon a vegetable diet. When meat, bones and fish are fed to poultry the manure is more valuable. Much also depends on how the droppings are kept. If exposed and allowed to become very dry, they are then of little or no value, as they undergo a chemical change in which much of the elements are converted into insoluble silicates.

Tarred Paper Houses.

If the stiff tarred paper be used, a very cheap coop may be built with it, and double walls (dead air space) provided. There are two modes of so doing. One is to erect a frame, brace it well at the corners, use cheap half-inch siding for walls and roof, and cover the outside with tarred paper, well tacked on, finishing with a covering of cheap paint. The other mode is to make the frame of 1x2 inch shingle lath, using 3x4 scantling for the corners and lath the outside, laying the tarred paper over the lath and painting as before. Then paper the coop inside for both methods, using lath to lay the paper on, but the laths may be a foot apart, which will allow of but small expense in that direction. This gives a dead air space, prevents draughts, and renders the coop very warm. The roof may be also of tarred paper laid on boards. It can be purchased at about half a cent per square foot.

The First Steps.

The man who cannot make a dozen hens pay a fair profit on the investment will not succeed with a large number. The losses occurring with large flocks are due to diseases, which may carry off hundreds in a short time. The individuals of a small flock may be easily noticed, and when a whole year has been given to observation with such a flock the matter of keeping poultry for profit will be better understood. It is not so much how to succeed as how to avoid loss that the poultryman should understand. The first step is with a small flock, and progress should be made gradually, in order to become proficient.

Salt Beneficial.

Salt does not kill poultry, though such has long been the claim. If the fowls are allowed to have excess to the broken rock, salt or brine from a pork or fish barrel, they may eat to much, and be injured, but a proper proportion of salt in the food is as necessary for fowls as for animals. Many diseases are due to failure to supply salt, and this accounts for the cures effected by it in some cases, the fowls, when sick, being benefited by salt because it supplies a long felt want.

Using Milk for Hens.

Sour milk, buttermilk, or even whey, makes excellent feed for chicks, but it is much better to mix the ground grain with it than to place it where they can drink it, in order to avoid waste, as much of it is rendered very filthy if placed where the fowls have free access to it. An egg beaten in milk, and thickened with ground oats and corn meal, of any consistency, will be eagerly eaten by young chicks, but if cooked as bread, and crumbled, it will be better.

Utilizing Butcher's Waste.

The sheep's lights and livers (plucks) can be bought for a small sum, as can also bullocks' calves' and sheep's heads. The bones may be utilized as a fertilizer. Tie the sheep's lights to a small stake and allow the fowls to help themselves. The heads can be boiled to pieces and the bones removed. If preserved, the bones may be ground or pounded for the fowls, as they will be found superior to that which has been ground by the chandlers or at the bone mills.

Tame the Birds.

Kindness to the fowls makes them very tame, and they will come whenever desired, a simple call being easily recognized. It saves labor to keep the birds tame and devoid of fear. Perpetual excitement is also a hindrance to egg production.

Tame the Birds.

Kindness to the fowls makes them very tame, and they will come whenever desired, a simple call being easily recognized. It saves labor to keep the birds tame and devoid of fear. Perpetual excitement is also a hindrance to egg production.

THREE LITTLE ITEMS.

The Center of the United States—Beats Stopped by Fishes.

We have been shown a letter from Mark Cary, dated Cape town, Africa, April 23, the date of his arrival there. Mr. Cary left here, says the Ochoce Review, a little over two months ago to seek his fortune in the gold fields of Africa, and from the tone of his letter we judge he is not discouraged. He was not favorably impressed with Cape Town, but says the country to the north, as described to him must be grand. He says good land can be bought for three cents an acre, and he expects to make an investment of about 3,000 acres.

It has been said that smelt were so plentiful in Portland, Or., last season that dealers gave them away to get rid of them. Several years ago smelt were so thick in Lewis river that a steamboat had to lay up for three hours. Of course the boat could run through the schools of fish, but the wheel dished them up so fast that the openings for the connecting rod from the cylinder to the crank shaft were filled up and then stopped the boat. The fan-tail also got full and raised the wheel-house up. As the boat ascended the river, a wake of dead fish was left behind.

"When I sat at my desk in Sitka," said Governor Swineford, "I was further from Otter Island, the westernmost point in Alaska, than I was from Portland, Maine. This may serve to give some idea of the prodigious dimensions of Alaska. But I can furnish a more striking one. If the capital of the United States were located in the center of the United States—that is to say, at a point equidistant from Quadhead, Me., and Otter Island, Alaska—it would be in the Pacific ocean, some 600 miles north by west of San Francisco."

"KILLING" DOWN FINE.

The slaughtering of cattle has been reduced to a scientific point which makes what the country butcher would throw away as offal almost as valuable as the meat of the animals itself. For instance the stomachs of hogs are now used in the manufacture of pepsin. Pig's feet, cattle feet, hide clippings and the pith of horns are devoted to the manufacture of glue. The paunches of cattle are converted into tripe and the choice parts of fat into oleo oil, a constituent of butterine. Intestines are used to pack putty in, undigested food in cattle is pressed and used for fuel, horns and hoofs are sold to button manufacturers, and blood, coagulated by steam, becomes an effective fertilizer. Even the bones are dried and either ground into bone meal or used for manufacture of bone charcoal, which is afterward utilized for refining sugar and in some other refining processes. As in nature nothing is lost in the butchering business.—Salem Statesman.

A writer in the Prairie Farmer says: It is useless to attempt to raise small fruits and poultry on one and the same piece of ground, because the two are incompatible and the amateur may just as well know it first as last. From the time plants are set out until the fruit is ripe they will constantly work injury to it. Chickens weighing less than a pound may be permitted to run at large among raspberries, blackberries and grapes after the fruit is gathered up to blossoming time again, and they will be of considerable benefit by destroying insects injurious to these fruits, but from the time the fruits begin to form until they are gathered they must be kept until if a crop is desired. And there is no reason or time when chickens of any age or size will do a strawberry plantation any good whatever.

When the lot is small—less than two acres—it is best to divide it into two equal parts by means of woven wire fencing, and grow fruit on one part and poultry on the other. The poultry house should be on or near the dividing line and the coops may be placed along the fence when it is desired to have the little chicks run in the fruit lot, and they can be removed to the opposite side when the fruit is setting. Plums and other tree fruits may be planted in the poultry yard and the flights cut off of one wing of all the grown fowls every spring.

On the farm it is best to fence fruits in and let the fowls have free range. The best fence for this purpose is one having three or four boards for the lower part, then woven wire eighteen or twenty-four inches wide with a barbed wire at the top. Such a fence will stand firm without sagging and not one fowl in a hundred will ever learn to fly over it. Place the bottom board one inch above the woven wire. This barbed wire will prevent stock from breaking the woven fence down.

Dr. Clark is now prepared to extract teeth by electricity. The most sensitive tooth can also be prepared for filling without a particle of pain, by the use of electricity.

TIMES PRICES!

FOOT WEAR--From the old common-sense broad toe to the new "razor" toe, for men and boys, and at such low prices that you can't afford to go bare-footed. Call and be convinced.

Of Dayton.
For Coroner,
I. N. KENTON,
Of Dayton.

Three Million Dollars.

The people of the Pacific Coast sent east last year over \$3,000,000 in hard cash for eggs and poultry. This great sum of money ought all of it to have gone into the pockets of Pacific Coast poultry-keepers. It pays to keep fowls, but they must be managed right. No big ranch is necessary, thousands are making money with small and large flocks of hens in village gardens and small orchards. Fruit growing and poultry breeding go together finely. The Pacific Coast Fanciers' Monthly tells all about it. Not thousands of miles away, but right here on this Pacific Coast. It tells how to make poultry-keeping pay, how to build coops, how to feed for eggs, how to cure diseases, how to tell good fowls from poor ones, in short how to make money with hens. It is bright, practical, money-making, invaluable to all who keep fowls of any kind. It is brim full of good reading and beautifully illustrated. If you keep a dozen or a thousand hens you want the Fanciers' Monthly. Take nothing else said to be just as good—get the best. It costs but little, only One Dollar for one full year. Try it a year, and see if it is not a dollar well invested. Don't put off taking it; subscribe now! Send your address at once, with One Dollar, to
THE FANCIERS' MONTHLY,
San Jose, Cal.

The Weekly Oregonian and the Graphic are one year for \$2.50.

The Chehalis Valley Bank,

In its new rooms near the post office, Newberg, Oregon.
Affords ample facilities for the transaction of a general banking business, including Foreign and Domestic Exchange. Thanking the public for favors of the past year, we solicit a continuance of the same for the future.

5 DOLLARS
TO
20 PER DAY
Easily Made.

We want many men, women, boys, and girls to work for us a few hours daily, right in and around their own homes. The business is easy, pleasant, strictly honorable, and pays better than any other offered agents. You have a clear field and no competition. Experience and special ability unnecessary. No capital required. We equip you with everything that you need, treat you well, and help you to earn ten times ordinary wages. Women do as well as men, and boys and girls make good pay. Any one, anywhere, can do the work. All succeed who follow our plain and simple directions. Earnest work will surely bring you a great deal of money. Everything is new and in great demand. Write for our pamphlet circular, and receive full information. No harm done if you conclude not to go on with the business.
GEORGE STINSON & Co.,
Box 488,
PORTLAND, MAINE.

WHY NOT?

Yes, why not use home remedies when they cannot be excelled?
Dr. Wm. Ellis' Liniment

has never been excelled for many things. It cures Cancers (if applied in time.) Cancers, Tumors in the flesh of man or beast, removes lumps from the face, cures Corns and Bunions, Fistsula on horses, bites and stings of poisonous insects etc. It is good for Rheumatism, Neuralgia, Tooth ache, Sprains, Bruises, Fleas, and all aches and pains of the body, and almost invariably takes the place of the surgeon's knife in case of tumors etc. It does not eat its way, and leaves no scar.

READ A FEW TESTIMONIALS.

One bottle of Dr. Wm. Ellis' Liniment removed a large tumor from my boy's neck after seven years treatment with other remedies, with no benefit. GEORGE FRAMMER, Home, Greene Co., Tenn., July, 1892.
One small bottle of Dr. Wm. Ellis' Liniment cured a severe pain in my side which had caused me much suffering. EDWARD SMITH, Newberg, Oregon, 1890.
One bottle of Dr. Wm. Ellis' Liniment cured very bad bunions on my feet of four years standing. Newberg, Oregon, June 1893.

SURVEYING.

F. A. ELLIOTT,
Practical Surveyor, is prepared to survey, subdivide and plat farms, Poultry Tracts or Town lots on short notice. Satisfaction guaranteed. Government land located.
NEWBERG, OREGON.

DRESSMAKING.

(Just north of Bank of Newberg.)
Latest Styles. Prices Reasonable.
Will purchase dress goods, trimmings and all notions when desired.
Mrs. McDaniel.
