The guns are built into the accompanied the Gussle on her expedivessel, which acts as a movable gun tion. The Suwanee, backed up by the which are marked by perfect simplicity carriage. Their muzzles are carried forward and project above the deck, near the bow, at an elevation of 18 degrees. They are made of thin cast iron, are 15 inches in diameter, and are 54 feet long. They are not rifled, the vanes upon the projectile being relied upon to give the desired axial rotation. The full-sized shells for the guns are 14% inches in diameter and about 7 feet long. A tail is fitted at the end of the shell with spiral vanes, which secures its alignment and rotation. They are designed to carry a charge of 150 to 200 pounds of dynamite or guncotton, and the effect of the latter charge the results at Santiago attest. Experts say that If one of these giant shells exploded within twenty feet of an armored vessel, a ion of the hull would disappear.

The shells are hurled from the guns by compressed air and so powerful is miles. The air is compressed into res- the bait. Blue's boat ran on a reef near ervoirs containing a large number of Cape Francis, and would have made an famous old Swiss was actively engaged

The guns are loaded and handled five Spanish gunboats, and reached the with ease. Under the rear of each gun outposts of General Gomez, where he are two "revolvers," each containing planted the American flag. On his refive chambers for the shells. When the turn from his hazardous expedition

LOADING THE GUNS.

upward, completing the continuity of the barrel. The "revolver" is thus turned forward one division so as to be ready to supply the next shell. Hydraulic power is used to execute all the maneuvers. The complete armament of each gun is ten projectiles.

When the gun is to be fired the air is admitted to the chamber by means of a valve. The distance that the shell will be thrown depends upon the amount of air admitted into the pneumatic tube, which is controlled by the valve. The firing can take place as rapidly as the shells can be loaded into the tubes.

The Vesuvius is particularly well adapted for blowing up mines by exploding dynamite shells in the mine fields. A shot from one of her guns, it is estimated, will set off every mine than does the tall aloe, which is partie within a radius of fifty feet from the ularly beautiful about the quaint old point where the shell explodes. The church on Tresco island, where the lord great weakness of the Vesuvius lies in proprietor has his home. Its armor, which is but 3-16 of an inch thick and could easily be pierced by a shell. In treating the tin summer fabrics, have hit on the happy plan of closely tucking the upper part of the skirt from the waist to above the knee, whence the material hangs full and free round the feet. The style is well expressed in a green and white foulard, the top of the skirt vertically tucked, the hem finished with two narrow pinked-out ruches of white silk. The bodice, something of the shape of a mess jacket, was entirely tucked, and opened over a pretty vest of white silk, adorned with green ribbon embroidery. The sleeves of the green and white foulard were tucked from shoulder to season of 1897, from April 5 to Oct. 30. the "Uncle Remus" tales. Few men wrist, and ended with bell cuffs lined with white silk.
