NO DRAGGING OF BUNDLES

ON THE

NEW CENTURY BINDER

It Does Clean Work

A binder that does not cleanly separate the bundles from the untied grain costs a lot of your temper and time. Time is money during harvest. To avoid this loss use the New Century. The above cut tells the story. From the moment the needle appears above the grain until it returns beneath the deck, no grain is fed down by the packers. They serve to keep the grain from pressing against the needle. The revolving discharge arms do not come into contact with the untied grain. For good clean work use the New Century. If you will only let us show you the New Century and thoroughly explain it we'll be satisfied with the result for it will be another sale for us—one more satisfied customer.
