Great Northern Exhibits Oregon Products

At Northwest Land Products Show

Besides the official exhibit of this state which is to be made under the direction of the governor at the Twin City Land Show, the efforts of the state officials will be supplemented by good exhibits to be made of our products by the railroad companies.

The Great Northern has just bought five sections at the Twin City show,

special part of it will be shown for the first time at the big show in St. Paul, the Great Northern will also show in New York City, in Omaha and at several other shows during the fall and winter. From all of these displays our state will reap a benefit and the railroad company divides its space up and places the name of the state over that part of the

which is to be given from December 12 to 23 under the auspices of the Northwestern Development League. This means that railroad company will have about 1,000 square feet of exhibit space to fill from the states along its lines. Being the first railroad company to buy space, the Great Northern has secured the pick of the space after the reservations were made for official exhibits. Representatives of the railroad are now at work collecting the exhibit. While a

exhibit which is collected from here. Speaking of the advantage of making these exhibits, President L. W. Hill says, "From experience we find that we get better results from our exhibits at land shows than from any other single form of advertising which we do." It follows that if the railroads get such good results from the land show exhibits, the states which they represent must get a large share of the benefit.

COCA COLA VS. "NEAR BEER"

Most Anything Else Says Church Paper.

A local citizen interested in up-lit work has handed the Gazette-Times the following clipping from "The Evangelical," a church paper published at Harrisburg, Pa. This paper says coca cola is worse than "near-beer." This is a pointer for those who do not know what to do when they want to change from Peruna and Hostetter's Bitters. The Evangelical says:

"Dr. Harvey Wiley, chief of the Bureau of Chemistry, says that the sale of drug drinks should be prohibited.

"The promoters of the best known of these drinks, coca cola, have always insisted that their beverage is harmless. Evidently the government chemists are not of that opinion, for on page 268 of the report referred to in the foregoing, this is said: The prevalence of the coca cola fiend is becoming of great importance and concern.

"Some Southern newspapers are now warning against coca cola. One Atlanta paper has recently dared to speak out in behalf of the children who are being sacrificed in health to the avarice of the manufacturers of this drink. The Atlanta Jeffersonian says:

"Any man, woman, boy or girl who tampers with coca cola will form the coca cola habit. Any man, woman, boy or girl who has become a slave to the coca cola habit is on the road to ruin.

"The appetite, like the whiskey thirst, will establish a mastery over the victim. It will demand more and more. It will go from one glass per day to two, and from two to four, loosen the moral structure."

"The pastor of West Market Street Methodist church, at a recent Sunday morning service, made the startling statement that there are dozens of woman in Greensboro who are "dope fiends." They drink coca cola with aromatic spirits of ammonia in it regularly, beginning before breakfast and keeping it up all day. The bare coca cola not being strong enough, the ammonia is added in increasing doses to make it stronger. He had gotten the facts from headquarters and he took occasion to remind the W. C. T. U. that there was something for them to do right here. Verily!"—Corvallis Gazette-Times.

A NEW WAY TO BOOST OREGON

The man on the ground is Oregon's best immigration agent, according to E. C. Leedy. And Leedy ought to know, because he is the General Immigration Agent of the Great Northern Railway, with headquarters at St. Paul, Minnesota. Last spring, during the immigration period, President L. W. Hill instructed that a check be made of each train entering Oregon and information secured as to how the newcomer happened to go to Oregon to live. Seventy-five per cent responded that it was through the influence of friends already on the ground and prospering that the move was made.

Every eastern man in Oregon after harvesting his first crop, becomes an enthusiastic booster. He wants his friends in the east to come west and share his good fortune.

Mr. Leedy has already sent out thousands of the Great Northern Railway's new bulletins on Oregon, and many new settlers have moved to Oregon on this account.

The Oregon bulletin shown above is a 36-page, handsomely illustrated book, with a four color state map and four color cover. It contains many letters from Oregon farmers and will be distributed throughout the east wherever we can find interested people. Send the names of your eastern friends to whom you would like this free booklet sent to E. C. Leedy, General Immigration Agent, Great Northern Railway, St. Paul.

PRESBYTERIAN CHURCH

There will be communion services and the public reception of new members next Sunday morning. The message of the third chapter of I John will be brought at the evening service.

Card of Thanks

We wish to thank our friends and neighbors for the floral offerings and assistance during the sickness and at the funeral of our darling baby, Alice.

MUSHROOM POISONING.

The Way It Acts and How It Should Be Treated.

When one considers the frightful consequences of gathering and eating poisonous mushrooms in mistake for the edible variety it is little short of marvelous that one without knowledge should dare go into the fields and woods and pick and eat any of the fungi growing there.

If one is thoroughly familiar with a particular variety of edible mushroom and can distinguish it at sight from all others, however similar in color and form, it is safe to eat that particular variety, but one must beware of other kinds that resemble it, for, however slight the difference in appearance, one may be edible and the other poisonous. There is no absolute rule for distinguishing the edible from the poisonous kinds, and it is better, therefore, to give no general rules, but to follow only one. Suspect every mushroom which you do not know positively to be edible. To this rule perhaps may be added a second: Learn to distinguish the white spored agarics and avoid them all, for, although there is an edible species, it requires an expert to tell it, and the poison of another species is deadly, and there is no known antidote for it.

The chief poisons in mushrooms are two in number—muscarin and phallin. The first of these produces symptoms resembling those of alcoholic intoxication, followed by convulsions or paralysis, collapse and death from heart failure. These symptoms come on soon after the mushrooms have been eaten.

In poisoning by phallin the symptoms do not appear until several hours after the meal. They resemble cholera, beginning with severe abdominal pain, soon followed by vomiting, purging and collapse.

In all cases of mushroom poisoning, vomiting should be induced as soon as possible, and a large dose of castor oil may be given to hasten the elimination of any as yet unabsorbed portions of the mushroom.

Stimulants are needed to support the heart, and milk containing an abundance of magnesia or bicarbonate of sodium may be given.

Injections of a salt solution into the veins and—in case of muscarin poisoning—hypodermic injection of atropin are often employed by physicians with benefit.—Youth's Companion.

Our System of Notation.

Some system of notation has been used since time out of memory. The first record we have of it is of figures written with a stick on a flat surface covered with sand. Before that all calculations were made with pebbles, beans and the like. Even now the Chinese do their calculating with little stones or beads strung on wires, in a frame. The Romans first used vertical lines—I, II, III, etc.—to express numbers. The Arabic figures, which we commonly use at the present time, are of much earlier date. The Arabic system is chiefly valuable on account of the great convenience it affords by giving a figure a value according to the place it occupies in the line. By this system the most enormous sums can be expressed by the ten little characters which form the numerical alphabet.
