### DUNDEE

Henry Hagey has purchased the Al Livengood property.

Al Livengood will build a new home on his part of his father's land.

Bland Herring has purchased the Dundee property owned by Elmer Everest. It was formerly the Samuel Parrett home.

In the County Educational Contest, recently held in the schools of Yamhill county, the first prize, a set of encyclopedias, went to McMinnville, but two of the five second prizes were won by Dundee pupils. The fortunate winners of the five dollar prizes were Mabel Swink and Augusta Niederberger.

Roe Robison made a business trip to McMinnville on Monday.

On the afternoon of Friday, the 28th, a memorial service will be held by the Dundee W. C. T. U. at the church, in honor of Frances Willard and Neil Dow. After the program a social hour will be spent and refreshments served.

### CHEHALEM CENTER

President Pennington, of Pacific College, will tell about the Five Years Meeting of Friends Church at the church Sunday morning.

The matrons medal contest was held at the schoolhouse last Friday evening as announced. Quite a number were present, Mrs. Blum Mrs. Hess, Mr. and Mrs. Baker, and Mrs. Cyrene Palmer, of Dundee were there. The contestants all did well, Mrs. Maude McGuire taking the medal, Mrs. Baker being close second.

Rev. Parker, of Springbrook, gave an interesting talk at the church last Sunday.

A number of the Chehalem Center people went up to visit Enos Ellis the first of the week as he is sick abed at his home on the mountain.

Lillie Hullet, age 16, to Guy E. Tatom, age 21.

### MASS OF THE EARTH.

It is About Twice as Rigid as if Composed of Steel.

From refined researches in the transmission of earthquake waves through the earth's strata, from computations made by high mathematicians upon data secured by swinging delicate pendulums in north and south and east and west planes and from the motions of horizontal pendulums in subterranean chambers it has been deduced that all these movements can be explained by the properties of the earth's mass if it, as a whole, is

about twice as rigid as if composed of steel.

The little scratchings made by man on the surface reveal rocks, but none approach steel in rigidity. The specific gravity of the earth is 5.66—that is, it is that many times denser than if composed of water.

Pendulum experiments and record studies of variation of latitudes and of tides in the solid materials of the earth all indicate that the globe as a whole is very rigid. But the material within is unknown.

It is not absolutely rigid, however, because the pendulums were deflected only two-thirds the amount they would be with an earth whose rigidity is absolute.

Changes in latitude of places show that the equator moves, but this cannot move unless the axis moves slightly in reference to the principal axis of rotation. Thus the earth actually wobbles like a peeg-top. And from this fact it appears that its rigidity is greater than that of steel.

We have no clew as to what the materials of the earth's center may be to have this great rigidity. But tides in the globe, as revealed by pendulums, wave velocities that are propagated by earthquakes and real changes in latitudes agree that the earth is more rigid than if the interior were made of steel.

Nothing is known as to the thermal state of the central regions. White hot lava certainly pours forth, but we do not know from what depths. Heat increases with depth of mines, but we do not know if this increase continues. If it does, then any substance known would be melted.

If the center is melted, then the crust, to be so rigid, must be composed of materials whose nature is unknown. If absolutely rigid, then no attraction of the moon nor any other body or combination of bodies could cause the earth to bend. But it does rise and fall in minute tides, and these are about the same as they would be in a sphere of nearly double the rigidity of steel.—New York American.

### Up to the Deer.

The colonel was boasting of his native south.

"Wonderful country down in Texas, seh, and pow'ful fertile too. Yes, I know many a spot down there where the trees grow so close together that you all couldn't shove youah hand between their trunks. And as for game, seh, why, I've seen deah with antlers eight feet apread! Yes, seh!"

"But colonel, how can such deer manage to get their antlers between such tree trunks?"

The colonel drew himself up with great dignity.

"The, seh," he replied, "is theh business."—Portland Press.

### Symptom of Recovery.

A doctor who had been attending an old farmer for a fortnight or so pronounced the patient so much improved that it would be unnecessary for him to call again professionally. Next day the medico was not a little astonished to find the ex-patient in the surgery with a half consumed bottle of medicine in his hand. "I thought, doctor, as you said that I was all right again that I needn't finish t' bottle, so I've brought it back, as it'll happen come in handy for some other badly (sick) body that's got t'same complaint as I had. And you'll likely knock something off my bill, seeing that I've only sopped half of it." Thus showing a shrewd, saving turn on the convalescent's part.—Chambers' Journal.

Reclamation of Hundreds of Thousands of Acres May Follow Survey Salem.—With \$100,000 available, the work of making a detailed survey of the resources of the Deschutes river can be commenced just as soon as John H. Lewis, state engineer, and the chief of the reclamation service agree on the provisions of the contract between the state and the government for the expenditure of this fund. At present, the contract is being held up because the state engineer wants to have its provisions broad enough to cover other streams besides the Deschutes, and the chief of the reclamation service has drawn the contract so as to confine the work to that one river.

This fund of \$100,000 is made up by an appropriation of \$50,000 from the state and \$50,000 from the government. This is said to be the first time the government has agreed to co-operate with a state on such a large scale in a matter of this kind. Its importance is much greater than is generally understood.

Success of Apple Sale Astounding. Portland.—Portland's first general apple sale, the biggest in the history of the United States for the same space of time, ended with a record of between 30,000 and 25,000 boxes of apples sold, an average of about eight apples for each man, woman and child in the city.

Compared with the famous apple sale at Chicago, last month, when 84,000 boxes of apples were moved, and considering the difference in population, Portland families purchased nearly three times the quantity of fruit.

Oldtime Malheur Camp is Revived. Malheur.—Following the example of its sister town of Brogan, 18 miles south, this old mining camp, in the extreme northern end of Malheur county, held a mass meeting and raised a large cash bonus for the establishment here of the Malheur Mining News, a new weekly newspaper. The publisher receiving the bonus will put in a plant here, as well as at Brogan, and the Malheur Mining News and the Brogan Herald will make their initial appearance about April 1, one on Tuesday and one on Friday.

## The Democratic Administration

will probably make little difference in the prevailing prosperity of this nation, state or community, but it's always safe to save no matter who is President. Save while you are earning and be prepared for the time when your earning capacity will cease. Its easy when you get the habit. Put your money in our Savings Department where it will be absolutely safe and draw 4 per cent interest, compounded semi-annually.
