#### FEATS OF STRENGTH.

##### A Blacksmith Who Turned the Tables on Augustus the Strong.

Not all the world's strong men have been performers on the public stage. Indeed, instances might be multiplied in which the feats of professionals have been equaled or excelled.

Charles Louvier, a carpenter of Paris, found it child's play to roll a tin basin between his fingers into a cylinder. On one occasion he carried off a soldier on guard who had gone to sleep in the sentry box and deposited both the box and the soldier on a low churchyard wall near by.

Another man who sometimes found his great strength a source of amusement was a Danish locksmith, Knut Knudson. While standing in a window on the ground floor he lifted with one hand half a bullock from the shoulder of a butcher who was toiling past with his load.

Augustus the Strong, the elector of Saxony, once entered a blacksmith's shop to have his horse shod. To show his suit how strong he was he picked up several horse-shoes and broke one after the other, asking the blacksmith as he did so if he had no better. When it came to paying the bill the elector threw a silver piece on the anvil. It was a very thick coin. The blacksmith took it up and broke it in half, saying, "Pardon me, but I have given you a good horse-shoe, and I expect a good coin in return." Another piece was offered him. He broke that and five or six others. Then the humiliated elector handed him a louis d'or, saying, "The others were probably made of bad metal, but this gold piece is good, I hope."

An Italian, Luigi Bertini of Milan, performed a similar feat. Besides horse-shoes, he broke nails a finger thick.

The Duke of Grammont, the minister of Napoleon III, frequently astonished the women at court by bending a twenty franc piece in his hand.

#### LIGHTSHIP PERILS.

##### Safety of the Vessel and Its Crew is the Last Consideration.

Among the unsung heroes of this country are the members of the light-house service, which is entirely distinct from the life saving service. The entire lighthouse corps designed to warn ships of danger points covers 100,000 miles of coast line and reaches from Alaska to Panama, the maintenance of it costing approximately \$6,000,000 a year. It has about 13,000 "aids to navigation," including light-houses, lightships, bell buoys, tenders, submarine signals, and fog signals.

A lightship must be kept always in one particular place. Anchored to the bottom of the sea, she has her steam always up, but she never sails unless relieved by another ship so that she may put into port for repairs. And such a boat is used because a warning must be given at a place where it is impossible to build a lighthouse and where even the clamor of a gigantic bell buoy is not sufficient to warn the navigator. No matter how fiercely the storm beats or how desperate may be the boat's plight, she must stay at her moorings. The only movement she is allowed to make under the regulations is to sink when at last she can withstand the gale no longer.

Throughout the service, both in the lightships and on the vessels, there is one object, one dominating creed—to keep the light burning and the whistle blowing. This is the supreme work of the men's existence. And it would bring them deserved recognition if the government ever published a list of those who have lost their lives in the line of such perilous duty.

For about \$6,000,000 a year these men and their craft save from disaster the billions of dollars' worth of shipping and commerce that come to American shores.—Popular Magazine.

#### Dwarf Elephants.

The island of Malta is the only known spot where remains of dwarf elephants are found. There are several places on the island where the bones of these miniature pachyderms have been unearthed, and hundreds of skeletons have been secured in whole or in part. One of these was a full grown specimen less than two and a half feet in height and could not have weighed over 600 pounds when in flesh.

#### FASHION AND MISERY.

##### A Pitiful Tragedy That Revealed an Incongruous Combination.

One of the standing subjects of humorous remarks among New York theatergoers is the weekly article on men's fashions, published over the nom de plume of Beau Brummel, in the programs of the theaters of the better class.

Some people think Beau Brummel is a woman, while others believe him to be merely a haberdasher with a drug habit. However that may be, it is a reasonable supposition that no one wears any of the clothes that Beau Brummel writes about. It couldn't be done. If any man ever arrayed himself in one week's output of the Beau Brummel fashions and started down Broadway he'd land in jail or the psychopathic ward at Bellevue.

The case of Beau Brummel is merely funny. But here is a grim and pitiful little tragedy which is in a way related to it. In a small tenement, at the eastern and poverty stricken end of Fifty-sixth street, the police found John Conwell and his old mother, dead from gas. The man was past middle age and unmarried. They lived alone, and he idolized the woman—a poor, old drunkard. The neighbors said he used to cry hysterically when she would stagger home, stuffed with drink. At last he turned on the gas while she slept and died with her.

He wore cotton overalls at the time of his death, and the few articles of his wearing apparel found in the apartment were worn and ragged. Yet the letters and papers which the police took possession of proved that he earned a livelihood for himself and his mother by writing articles on the latest fashions in men's dress.—New York Letter in Cincinnati Times-Star.

#### Argued Too Long.

"Why did you permit yourself to be drawn into a long argument with your assailant?" asked the policeman. "A long dispute was just what I was trying to avoid when I called him a liar," explained the man on the hospital cot.—Buffalo Express.

#### Two Meanings.

The different meanings that a simple turn of expression can give a word are often curious and sometimes amusing. An anecdote of Charles Lamb, the famous English author, illustrates this very pleasantly.

On a wet, miserable, foggy day in London he was accosted by a beggar with:

"Please, sir, bestow a little charity upon a poor, destitute woman. Believe me, sir, I have seen better days."

"So have I," said Lamb, handing the poor creature a shilling, "so have I. It's a miserable day, even for London."

A similar illustration is of the man who saw some mischievous boys carrying off fruit from his orchard.

"What are you about?" he called lustily.

"About going!" called one of them, as the marauders disappeared over the fence.

#### THE HUDSON RIVER.

##### Its Name Has Been Changed Nearly a Score of Times.

While Henry Hudson is universally acclaimed as the discoverer of the noble river which bears his name, it is well known that nearly a century before Hudson's successful exploration John da Verrazano, a Florentine, entered the mouth of the Hudson and reported that he had passed up the river about a league in a boat, not venturing to sail his vessel, the Dauphine, up a river with which he was unfamiliar. A sudden squall impelled him to return to his ship. Verrazano called the Hudson "the river of steep hills." This was in 1524. Some years later Verrazano's brother made a map of the region, and he named the mouth of the Hudson "San Germano."

In 1525 a Spaniard named Gomez, who came to America on an exploring trip, made a chart upon which he designated the Hudson as "San Antonio."

When some eighty years later Henry Hudson in his efforts to reach the east Indian possessions of the Dutch East India company by a northwestern route accidentally ran into the Hudson he promptly dubbed it the "Manhattes," from the name of the Indians who dwelt at its mouth.

Hudson sailed slowly up the river as far as Albany, and his experiences with the Indians and his observations of the surrounding country were so gratifying that he returned home with glowing reports of the new found country.

The Dutch at once realized that great commercial advantage might be gained in the new territory, and various companies were organized to colonize and exploit it.

In 1616 a charter was granted to the New Netherlands company, and the river was there referred to as "De Riviere van der Vorst Mauritijs" in honor of Prince Maurice of Orange.

In various other charters granted at this time and public documents in which the river was mentioned it was spoken of as the "Grootte Riviere," the "Noordt river," the "River of the Manhattans" and the "Rio de Montague."

In addition to these names, the Indians had a number of others for it, among which may be mentioned "Sanataea," "Shawnatawy," "Cahohataea" and "Cohongorontas." As late as 1754 the river was referred to by a French writer as the "River Orange."

When the English took possession of New Netherlands they persistently called the river "Hudson's river," and despite the nearly a score of other names by which it was known that name finally "stuck," although many of the early colonists spoke of it as the North river in contradistinction to the Delaware river, which was commonly known as the South river.

#### A Natural Thermometer.

It was a sapphire that led the late Dr. Sorby to the discovery of the nature of the liquid sometimes found inclosed in the cavities of crystals. The gem in question contained a tube shaped cavity a quarter of an inch in diameter, which was so regular in its bore that it served by means of the liquid partially filling it for a thermometer. The contained liquid half filled the bore at 50 degrees F. and completely filled it at 89 degrees. A study of the rate of expansion of the liquid led Dr. Sorby to the conclusion that it must be carbonic acid.

#### Expensive Absentmindedness.

"What is all that noise about in there?" said the museum manager to the attendant, pointing to the room of the living skeleton.

"Why, you see, it was this way," was the reply. "The living skeleton is engaged to the armless wonder, and in a moment of absentmindedness he bought her an engagement ring. That noise you hear is the man kicking himself."—New York Times.

#### Berbers and Arabs.

The Berbers are not Arabs. The Berbers have been in North Africa for as long as history can tell us. They were there when Carthage was founded, seven or eight hundred years before Christ, and as they were then so they are today, apparently unchanged by the changing ages; the same brave, liberty loving nomads they were in the days of Hannibal and Scipio.

#### The First Encyclopedia.

The honor of first bringing a dictionary of general knowledge into alphabetical order belongs to Ephraim Chambers, an English Quaker, whose taste for literature was acquired in a globe maker's studio. He stole the time belonging to his master to compose behind the shop counter the encyclopedia published in 1727.

When the children are sick let us supply the medicine

If you have remedies for the children right in the house, this will save you many a sleepy, but sleepless, midnight floor-walk, and many a dark 2 A. M. trip to our drug store. Before baby becomes sick, ask your doctor how to prevent illness and save yourself the midnight floor-walks. In giving medicines to your tender children, you want to know that they are pure and fresh. We will not supply you with any other kind. Come to OUR Drug Store.
