THEY NEVER DRINK.

At Least That is What is Said About the Jack Rabbits.

A very curious feature of animal life in the deserts of the southwest is that of rabbits, quail, squirrels, deer, antelope, the mountain sheep and any number of reptiles and insects that live at great distances from visible water. The jack rabbit is especially notable in this respect, and, moreover, it flourishes in regions without a particle of green food in sight for miles and miles.

Westerners assert that the jack rabbit may be found happy and fat, spending the day under a scrap of brush that makes little more shade than a fishnet. His skin is as porous as a piece of buckskin, and the heat is sufficient to evaporate every drop of blood in his body, yet he seems to get on very nicely.

Californians aver that no one has ever seen a jack rabbit drink. Those who have camped for days in the deserts in vicinities where the only water for miles around was to be found and with rabbits everywhere declare that never does one of the little fellows come to the spring to drink. Men have even gone so far as to examine the margins of water holes in those districts, with never a track of the rabbit disclosed beyond where the grass grew.

One man tells of a raid of rabbits one summer that was beyond all conception by an easterner. The animals were so bold that they would come in before sundown. The irrigation ditches maintained by this man contained the only water to be found for miles. He was irrigating sixty acres alone and was up at daylight and on the ground till dark, when rabbits by the dozen were trying to get at the alfalfa, but during the three months of extreme heat that then prevailed, when rabbits poured in on him from the dry hills, he declares that never was one of them seen to touch the water.

Preventable Fires.

Analysis of a year's fires in New York state brings out figures rather uncomplimentary to the owners of the damaged property, says the Scientific American Supplement. Out of a total loss of some \$20,000,000 no less than 21.7 per cent is found to fall under causes wholly preventable, while 46.5 per cent is attributed to unknown causes. Among the strictly preventable causes we find all manner of faults which may be classified as bad construction, bad installation and bad practice.

Defective chimneys, improperly exposed steam pipes, hot ashes or coals, are merely a few of many examples which might be given of the items which constitute the cause of an annual loss of \$4,358,618.

Nothing Forgotten.

There is nothing—no, nothing—innocent or good, that dies and is forgotten. Let us hold to that faith or none. An infant, a prattling child, dying in the cradle, will live again in the better thoughts of those that loved it and play its part through them in the redeeming actions of the world, though its body be burnt to ashes or drowned in the deep sea. Forgotten! Oh, if the deeds of human creatures could be traced to their source, how beautiful would even death appear, for how much charity, mercy and purified affection would be seen to have their growth in dusty graves!—Dickens.

This Life.

There is only one way to get ready for immortality, and that is to love this life and live it as bravely and cheerfully and faithfully as we can.—Van Dyke.
