 Presents
"THE GREAT LOVE"
 An ARTCRAFT Picture

Cast Includes
Henry Walthall
Maxfield Stanley
Rosemary Theby
Gloria Hope

They're all fighting the war--the man who should-ers the gun and the woman who is transfigured by the Great Love--the love that places country above all else.

HENRY WALTHALL and ROSEMARY THEBY in
D. W. GRIFFITH'S "The Great Love"
 An ARTCRAFT Picture

A story of the re-generation of women by war. You see the Dowager-Queen Alexandra, Lady Diana Manners, Miss Asquith and a host of England's "proudest" working side by side with the most lowly Londonites, in this picture. Themselves, not impersonators.

WORLD SUPPLY OF IRON ORE

Outside of Well-Known Deposits, Brazil is Believed to Have the Greatest Amount of Ore Available.

Iron will continue to be one of the greatest necessities of reconstruction days as well as during war time and its sources will not cease to be centers of world interest. Of the undeveloped iron-ore districts the one of special importance is an area about 100 miles square in the state of Minas Geraes, Brazil, its center being about 250 miles north of Rio de Janeiro. The largest deposit of this region is stated to con-

tain at least 500,000,000 tons, while there are numerous smaller deposits of 10,000,000 to 50,000,000 tons, and the aggregate quantity of ore available is variously estimated up to 3,500,000,000 tons. Since 1910 English, Americans, French and Germans have acquired interests in the deposits. A new railroad gives means for transport of the ore, and an annual production as high as 10,000,000 tons is foreseen, the output going chiefly to Great Britain. This ore field ranks with the world's five greatest, the others being the Lake Superior in the United States, the Lorraine in northern France

and western Germany, and the districts of northern Sweden and the Oriente, Cuba.

DO YOU KNOW HER?

"June is the month of weddings, Mrs. Muchwed."
 "Yea, indeed, and it makes me feel very blue to think this is the first June in five years I've missed being married."

FLIES GIVE AID.

The ranchers of northern Modoc county, Oregon, are assured that they have a powerful ally in a small fly which is helping to destroy the grasshopper pest. Vast numbers of nests, each containing eggs, were left by the 1918 crop of hoppers, but close examination shows that this special variety of fly also deposited its eggs in the same nests. These are now hatching out in the form of grubs, which feed upon and destroy the grasshopper eggs. Grasshoppers did great damage in this country this season, and their return next season is regarded with apprehension.

A HOOVERITE.

"The war has changed Tom in one way."
 "How?"
 "A year ago, before we were married, he gave me a box of candy every time he called; now he gives me a call every time I buy a box of candy."—Boston Evening Transcript.

"JUST HUMAN, AS YOU ARE"
 Really There is Nothing So Greatly Mysterious About the Presiding Deity of the Telephone.

"Central" isn't any one person, writes Marion E. Bailey. There are thousands of "centrals" all over the world, and they are just people like you and me. Wherever there are telephones there has to be one place where all the telephone wires meet. This is called the central office, and there are people in these offices—the people we call "central"—because we do not know their names—who connect one wire with another, so that your message or the message of whoever is telephoning will reach the person he wants to talk to. When you take the telephone receiver and put it to your ear it lights a tiny electric bulb in front of the nearest "central." She puts a wire with a plug on the end of it into a hole near the light, and then she can hear your message. You tell her the number you want and she takes another plug and puts it in the hole that has that number. That rings your friend's bell and connects the wires so that you can talk and be heard. All day long those thousands of "centrals" sit before the "switchboards" where the holes and plugs and lights are, and connect one person's telephone with another person's telephone, and then at night other "centrals" take their places and sit there all night, so that no matter what time it is you can always telephone.

HAD THE SURGEONS STUMPED

Splinter in Soldier's Abdomen Undoubtedly There, but No Appreciable Trace of Skin Wound.

A soldier wounded at Verdun April 23, 1916, by several splinters of shell arrived at the American ambulance with the diagnosis of superficial wounds of the right thigh, left leg, forehead and scalp. Many splinters were removed and the patient was completely healed of his wounds 45 days after his arrival at the hospital. Just as he was about to be discharged he complained of abdominal pain and said he had the sensation of a foreign body in his ab-

domen. The Roentgen ray showed an ulceration of a half inch in diameter.

Exactly at the place indicated by the Roentgen ray an ulcer was found and behind it a shell splinter very irregular and sharp pointed, about a half inch thick. Attention is called to the possibility of a soldier having a splinter in his abdomen without any appreciable trace of a skin wound.

MATERIAL FOR POWDER BAGS.

Chemically treated cotton cloth, we are informed by the Army and Navy Journal, has been tested out by the ordnance department as a

substitute for the silk used for making powder bags. The importance of this experiment is shown by the fact that if it is successful it will bring about a saving of money in the ordnance program of about \$30,000,000, and at the same time it will go some distance in meeting the serious shortage in silk. At present bags for the large powder charges used in heavy ordnance call for millions of yards of silk, and the scarcity of silk has caused an enormous increase in the price. Early in the war Germany used chemically treated cotton, but the failing cotton supply has driven her to the use of still other substitutes.—Scientific American.

Cut This Out. Will Not Appear Again
