

Let Us Rebuild Your Old Tires

The life of a tire is not ended when the tread is worn out. To discard it is to throw away the greater part of its value.

With a Miller Ad-On-A-Tire, for a fraction of the original cost, your tire can be made practically as good as new. And it makes it an oversize tire with all an oversize tire's advantages.

Our process rebuilds any make of tire with new side walls and the Miller Geared-to-the-Road tread. This famous tread meshes with the road and produces positive traction. Every ounce of driving power is utilized, for the wheels do not slip.

The Miller Ad-On-A-Tire is actually a part of the tire. It is built with several layers of fabric and high grade rubber. It fits snugly, and cannot creep.

Let us re-mile your worn tires with the Miller Ad-On-A-Tires. Bring them to us today, and we will show you how to get miles and miles of additional service.

Build It Now
Both labor and materials are available once more and a great deal of government building, state work and factory construction already is under way. Measure the satisfaction your new home would bring and you'll want it now.
The sensible thing then is to BUILD NOW and we have all the material to build the sensible way—framing, siding, trim, doors, shingles and Beaver Board—the manufactured lumber, knotless and crackless—for the walls and ceilings. Speak to us about it today.

Bean Power Sprayers

Have now reached such tremendous national sale that the manufacturers are the first to carry full page space in the Saturday Evening Post and Country Gentleman. Read this advertisement which will appear in these publications, issue of January 10th, 1920. You cannot afford to use any other than the Bean Power Sprayer.

John Bean, Inventor

He Showed the Way in 1883 to Save Millions of Fruit Trees from Pests

IN 1883, John Bean, inventor of the double-acting force pump for well purposes, owned a fruit orchard near San Jose, California. His trees were suffering from San Jose Scale, imported from China, unwittingly by James Lick of Lick Observatory fame, and the primitive spray pumps of the time were inadequate.

He saw the need for more efficient spraying, and his inventive genius soon had worked out the first high pressure spray pump with air chamber.

Success was instantaneous. Requests from friends soon induced him to manufacture the machine.

The result was that millions of California fruit trees were quickly saved from pests that had blighted many fields.

The third generation of the family are the active manufacturers of "BEAN" Power Sprayers today. And the present machine—a family pride—still retains John Bean's basic principles.

TODAY, wherever men have ten acres of fruit or more, you will almost invariably find power sprayers of which the famous "BEAN" was the forerunner and remains the leader.

San Jose Scale is now practically unknown in California where more "BEAN" Sprayers are used than all other makes combined.

Many of the country's greatest orchards are now equipped with "BEAN" Power Sprayers exclusively. For the "BEAN," the pioneer in 1883, is the world's leading sprayer now.

The 36-Year Development

The 1920 Bean Power Sprayer Different from Others in Money Saving Ways

THE modern "BEAN" is different from all other power sprayers in some very vital ways.

The "BEAN" includes a patented pressure regulator that results in great economy—Threadless Ball Valves—Porcelain-lined Cylinders—doubly strengthened bearings and other wearing parts.

You will want these features and others found in "BEAN" sprayers if you are to spray at the lowest cost and with best results.

The "BEAN" Re-filler alone often saves one-half the time usually spent in spraying an entire orchard.

When occasion requires "BEAN" plunger packing is replaced in twenty minutes by an inexperienced man. No need for a mechanic and the pay for several hours of his time.

All six threadless ball valves are removed in two minutes with engine running and 300 lbs. pressure on the pump. Men who have spent half a day in removing threaded valves have doubted that statement until they have seen "BEAN" valves come out.

The valves are washed out while open, through an underneath suction—an other immensely convenient "BEAN" feature.

The porcelain-lined cylinders are without stuffing boxes. They eliminate greasy troubles and last a lifetime.

These advantages are the result of 36 years specialization in the building of improved power sprayers based on an ingenious, original design.

If you are going to buy a sprayer and want the best, there is little choice today.

"BEAN" Sprayers

Invented by John Bean

Send for our "Sprayer Book." Learn all about sprayers. These are other advantages in the "BEAN" that growers ought to know about. We make all kinds of all prices to meet every spraying need. Power sprayers, hand and barrel spray, pump, spray gun, tank, hose, and accessories.
