PLEASANT VIEW

Samuel Waddell was a caller at Henry Edwards' Sunday.

Miss Ruth Minear has been very ill with pneumonia, but is improving.

John Etwiler was shopping in Newberg Saturday and taking in the sights.

A number from Pleasant View district attended the boat races Saturday.

Carl Wohlschlegel is having some clearing and slashing done on his ranch.

Born—To Mr. and Mrs. Monroe Hutchens, June the second, a five pound boy.

The Hutchens Bros. have a number of cords of old fir and second growth wood to haul this summer.

John Jones, who has been ailing for some time with his head, went to Portland Sunday to consult a doctor.

Clara Edwards, Phillip Booth, Ray Ego and Frances Eddens motored to Willamina Sunday to spend the day with Gladys Edwards who is teaching school there, but will return home Sunday.

A number of friends and relatives were guests at the home of Mr. and Mrs. Monroe Hutchens last Sunday. Those present were Mr. and Mrs. George Maynard and family, Mrs. Jones and family, Fred and Homer Haynes, Mr. and Mrs. Carl Wohlschlegel and family, Mr. and Mrs. Doughitt and family, Mr. and Mrs. Date Hutchens, Mr. and Mrs. Tumbleson, from Forest Grove, Miss Winnifred Finnegan and Fred Wohlschlegel.

MARRIAGE LICENSES

Margaret Joanna Shotwell, McMinnville, to George James Prindle, Hermiston.

Anna Catherine Wagner, McMinnville, to Fred William Muhs, McMinnville.

Elizabeth Wolf, Yamhill, to Oliver Arteman Wilcox, Cove Orchard, Oregon.

Pauline Nelle Miller, Newberg, to Alfred Elmer Dixon, Newberg.

Esther Belle Alexander, Carlton, to Lloyd William Dundi, Carlton.

Ethel Kochis, Sheridan, to John Luther Ottinger, Sheridan.

Hazel Theresa Dodson, Yamhill, to Darrell Theodore Johnson, Yamhill.

Frankie Major Hernbeck, McMinnville, to Adoniram Judson Rhine, Yakima, Washington.

Oil Wells Detected Electrically.

New uses for electricity are constantly appearing. One of the latest is the detection of crude oil in the earth instead of boring for it.

It is stated that crude petroleum has been located electrically in the shallow oilfield near Corsicana, Texas, and that further tests are being made around Barkburnett. A series of batteries is used for the test, the negative terminal being connected to a wire which is dropped into dry waterhole, valley or indentation, and the positive terminal being connected to a "lead wire," which is used to make contact at various points on the surface of the field investigated. It is stated that the higher electrical resistance of oil compared with other constituents of the earth, permits it to be located by the reduced deflection of a sensitive instrument in the circuit.

Sand Long Retained Properties.

Prof. H. L. Fairchild of the University of Rochester and Dr. H. Carrington Bolton of New York found the sands at Rockaway beach emitting a high musical note one summer day in 1884. They collected some of the sand and took it home, where Prof. Fairchild put in a large glass bottle a sample, but except for that one instance the sand has been undisturbed for more than thirty-five years.

Professor Fairchild writes now to Science, saying that on December 2, 1919, he poured the contents of the bottle into a stocking and found that when quickly compressed it still gave out its characteristic high note, audible at a considerable distance. But since he spread it out in a dry room and handled it considerably it has lost its sonorous quality.

Hotels in Japan.

Plans are under consideration for providing the larger cities of Japan—Tokyo, Yokohama, Kobe and Osaka—with more hotels, it was announced recently in Tokyo by D. Shono, general manager of the Japan tourist bureau. He said, however, that it would be some time before these hotels are erected. "Efforts are being made to relieve the congestion in the city hotels by inducing guests to travel in the country, where hotels have room to spare." It is proposed to supply wireless information to incoming boats concerning the number of unoccupied rooms in the various hotels. The matter is under negotiation with the companies.

The Usual Thing.

"It says in the paper, here," remarked Mrs. Fields, in the midst of her reading, "that in a debate in congress Hon. Benjamin Blawhaw rose and shouted—"

"Don't bother to read the rest of it, Debby," interrupted Farmer Fields. "The honorable didn't say any more when he shouted than he does when he keeps still."—Kansas City Star.

PIPE MAKERS USING BIRCH

Wood Has Been Found to Be Eminent-ly Suitable, After Treatment by a Special Process.

American birch since the war has acquired a South American name. Nowadays it is fashioned into pipes and then called something besides birch. The only evident reason for the change seems to be the fact that the process that converts soft birch into a hard pipe was originated in a Latin American country, according to the New York Evening Sun.

Birchwood owes its new name and its present prominence in the pipe industry to the war, which cut off the supply of briar and sent the prices of the stocks in America sky high.

Substitutes have been sought for the expensive imported briar. The cessation of importations with the war—they haven't been resumed yet—intensifies the search for an American wood that would provide a suitable substitute.

Many native hardwoods were tried without success. Most of them were either too hard to be worked into pipes or too heavy to rest comfortably between a smoker's lips. Then some one hit on the expedient of trying a soft wood and employing a process that would give it the required hardness for use in pipe-manufacturing. Birch was found the most suitable for the purpose.

FIGHTING RATS WITH VARNISH

New Form of Trap Used on London Docks Said to Have Had Gratifying Success.

It is computed that the London docks contain about 1,000,000 rats, which attack grain, food, and other cargoes, causing about \$2,000,000 loss per annum. A society was established to exterminate this destructive enemy, but the congested state of the wharves made their schemes inoperative. Now a new benefactor has come forward with a "trap" that opens up a possibility of putting armies of rodents out of business. The process employed is simple. Traps are placed along or near rat holes. The trap is made of cardboard covered with lithographic varnish. The varnish is warmed by heating its container in boiling water till the varnish becomes sufficiently liquid, when it is spread 1-16 to 1-8 of an inch thick on pieces of straw-board or thickish cardboard, measuring about 15 in. by 12 in. A margin of about 1 in. is left clear of varnish, and bait placed in the center of the board, where it adheres to the varnish. Bags of 60 at a time have been secured. The medical officer of health for the port of London reports favorably of the antidote to the rat thief, and gives it as his opinion that once their tails stick on the board they are doomed, and that the majority die of fright. Another feature is that if two rats get on to the varnish together one of them kills the other, evidently thinking the other is holding him.

Pull Together for an American Merchant Marine

The war resulted in the creation of a great merchant marine—10,000,000 tons of American ships which cost us \$3,000,000,000.

Everybody agrees that we must keep this fleet on the seas.

If we fall back to pre-war conditions—when only 9 per cent of our foreign trade was carried in American ships—

We shall be in the position of a department store whose goods are delivered in its competitor's wagons.

Congress is considering legislation which will perpetuate our war-built merchant marine.

Until this is done the ships we have should not be sold to face conditions which, prior to the war, resulted in the decline of our merchant marine to insignificance.

This Committee calls attention to these facts because a right solution of our shipping problem is vital to the future prosperity of shipbuilding, but equally vital to the safety and prosperity of the nation.

Send for free copy of "For an American Merchant Marine."
