SCHEME WORKED TOO WELL

Teacher Should Have Remembered That Old Proverb Concerning Things Heard by Listeners.

A new high-school teacher had come to the local high school and was anxious to know how she impressed the faculty members and students. But she was new and of course would not ask any of them the others' opinion of herself.

So she began to watch for a chance to use her own ingenuity in making the discovery. And one day her chance came. She was in the principal's office filling out an identification card when she saw him and one of the other teachers coming down the hall. Quickly she slipped just outside the back door and stood there to listen a wee bit.

Just as she had hoped they would, they noticed the card she had just filled out. "Oh, she's the new teacher," spoke up the principal. "Do you know by any chance what history she teaches?"

The other teacher answered, "Ancient."

The principal grinned. "Why, of course," he returned. "I should have known that from her looks."—Exchange.

Curious Fatigue Test.

A unique method has been discovered to measure just how tired one's body becomes after hours of work. A line is drawn across the forearm with a sharp point, not sharp enough to break the skin, but only to drive out the blood and leave a straight white line on the skin. An observer holding a stop watch measures the time it takes for the blood to rush back into the skin and the white line to fade. The exact number of seconds and fraction of a second is recorded. This test is repeated say at intervals of one hour all day until the working hours are over. When these readings are plotted on paper a curve is drawn which tells at a glance just how one's energy ebbs throughout the day. There is always a marked jump in the line after lunch hour.—Boys' Life.

The Emu.

"The emu is a large bird, half the size of an ostrich," says Lee S. Crandall, curator of birds in the New York Zoological park, writing of "The Troubles of Father Emu" in Boys' Life. "It is found only in Australia, where there is also a closely related bird, the cassowary. The wings are rudimentary, so that the bird is unable to fly. But it does not suffer from this lack, for its strong legs enable it to run with great speed and agility. In fact, the emu is hard to catch and a dangerous opponent when cornered, for it is as elusive as an eel and can kick with tremendous force. When engaged in combat it leaps high in the air, and launches a trip-hammer blow strong enough to send a heavy man head over heels.

Attainable Goal.

So what is your star to be like? Is it worth going after good and hard? You don't want a star of a job or life work that is so tenuous the points will roll up and refuse to be pasted down as a sensible and effective decoration and insignia of what you represent. You don't want it to be so "fat" and material that all spiritual and ethical manifestations are lacking, and you don't want it to be so far away that it's out of reach—in fact, you want just a good, sizable star that is attainable by strong, steady determination and one that will shine brightly through every setback and discouragement.—Pittsburgh Leader.

Why Ocean Waters Are Never Still. The surface waters of the ocean are in constant motion under the influence of waves, tides, currents and drifts. Waves are vertical oscillations caused by the winds. Tides resemble waves in their motion, but they owe their origin to the attractive force of the sun and moon. The horizontal movements of the surface waters are known as drifts and currents. A drift is a general movement under the influence of the wind, but slower and more changeable in direction than a current. Inclosed seas have a circulatory movement because the water usually differs in density from the ocean.
