NEW FORD PROJECT
BEGINS PRODUCTION

Henry Ford II, three-year-old son of Edsel B. Ford, president of the Ford Motor Company, became an active participant in the great Ford industries recently when he scratched a match and lighted the oil-soaked excelsior that set off the first of the two big blast furnaces at the Ford River Rouge Plant near Detroit. Henry Ford held Henry II in his arms and helped him touch off the fire. Mrs. Henry Ford, Mr. and Mrs. Edsel B. Ford and a number of friends were present at the ceremony which marked the opening of another link of the Ford industries.

The blast furnace and rolling mills site occupies close to 200 acres of ground; already 12,000 men are at work in the plant, but thousands more will be needed when the construction of the huge undertaking is completed. Four more furnaces are under way; the skeleton of a new foundry which will be one of the world's largest, stretches along one side of the plant; coke ovens and by-products plants already are producing.

This new field of activity bids fair to grow to as great an institution as the Ford Automobile and Tractor factories; and will augment the production of those plants in no small way.

The unique plan behind this new Ford industry provides for eliminating considerable waste time and labor in manufacturing steel. It is expected that the iron ore poured into the furnaces will emerge as Ford parts, without ever having been cooled or made into pig iron as is usually the practice.

This first blast furnace will produce 500 tons of iron every 24 hours. To make it 1,000 tons of iron ore, 250 tons of limestone and 500 tons of coke are used. Fifty million cubic feet of gas will be developed daily as a by-product, and this will be used to heat to 1,400 degrees the 40,000 cubic feet of air which will be forced through the molten mass every hour under a 20-pound pressure. Ten million five hundred thousand gallons of water will be used daily to cool the base of the furnace.

Work on the second furnace is being rushed and it was announced that it too, will be making iron within 30 days. Foundation work is well under way for three additional furnaces, making a total of five, contemplated to complete the group at the Ford Rouge plant. These furnaces will all be of the most modern design and will be numbered amongst the world's largest. The consumption of iron and steel for Ford cars is estimated to be approximately 3,000 tons every 24 hours.

The ceremony which marked the firing up of the huge smelter carried Henry Ford one step nearer to a realization of a dream he has had for years—to see his own ships carrying the materials from the source of supply and to see these raw materials proceed through the various stages to the finished product, his automobile and tractor.

Ore from the furnaces will come down the lakes from Minnesota and the Upper Peninsula of Michigan and be dumped into giant concrete bins built on the bank of the River Rouge. From the bin it is run directly into the top of the furnace on an elevator called the "skip hoist." Limestone also is to come in by boat. Vast quantities of limestone and ore already have been stored up for the furnace.

The charge which was touched off had been in the furnace for a month, gradually being heated to the point where the "blowing" could take place.

SOME FIGURES TO THINK ABOUT

The Home Missions Council gives circulation to the following: There are 202 denominations in the United States. Thirty-one new denominations were born in ten years and seventeen died. Of all the people in the United States 41,926,854 are church members, an increase of 6,800,000 in ten years, or twenty per cent. There are 227,000 churches, an increase of 15,000. The value of church property is \$1,576,000,000, an increase of \$420,000,000 in ten years. There are 15,721,185 Roman Catholics. From this number should be deducted fifteen per cent for infants and children, all of which are included in the Roman Catholic statistics. Less than one-third of the church members in the United States are Roman Catholics. The Roman Catholic proportion in the total membership was forty and one-half per cent in 1906; in 1919 it was thirty-seven and one-half per cent. In ten years the Roman Catholics gained ten and three-fifths per cent, while the Protestant churches gained twenty-three and

two-fifths per cent. The Baptists gained twenty-six and one-fifth per cent; the Disciples twenty-four and four-fifths per cent; the Presbyterians twenty-three and one-fifth per cent; the Methodists and Episcopalians twenty-three and one-fifth per cent; the Congregationalists and Lutherans thirteen per cent. The Universalists are losing, having today only 69,000 members. The Unitarians have only 82,000. The percentage of men in nearly all Protestant churches is increasing. It is now forty-three and nine-tenths per cent.

APOLOGIES TO BR'ER RABBIT

Field Mouse, Not Bunny, is Anathematized Girder of Trees, According to Eastern Expert.

An official of the state fish and game commission informs us that we are unjust to the rabbit in ascribing to him all the girdling of fruit trees which has been going on in these parts lately. Our informant says, observes a writer in the Ohio State Journal, that the field mouse is responsible for more than 50 per cent of this damage and we hasten to tender our sincere apologies to the rabbit, whose feelings we would not hurt for the world, and are quick to give the guilty field mouse his just share of censure.

Field mice, it seems have the indefensible habit of burrowing among the roots of small fruit trees in the fall, hollowing out a warm place, as field mice estimate warmth, and spending the winter there. When they get hungry and nothing else is available, they shin up a little way and eat the bark of the tree cunningly making tooth marks almost exactly like rabbits' and thus throwing editors and other experts off the scent. The rabbits are not wholly without sin, but a 49 per cent sinner averages up fairly well with the rest of us. Moreover, the rabbit may easily be fooled in his

traps from grace by placing a piece of tar paper about two feet in height, or a piece of wire netting around the base of each young fruit tree. Perhaps this expedient, like other prohibitory measures, does not build character in the rabbit, but it does in the orchardist. Nothing, we understand, can be done about the field mice unless one stays at the foot of the tree and catches them. They are lost in sin.
