SCHOOL BOARD MEETING HELD MONDAY, MAY 1

(A Farmer's Viewpoint)

Monday evening the School Board of Newberg, Dis. 23, held their regular meeting in the library building. The board find themselves, as many others have, in the need of the most rigid economy. In striving to do justice every item has been carefully considered that expenses might be reduced to the very lowest level consistent with efficiency. In doing this the elimination of some departments were considered. In this connection the Smith-Hughes department of Agriculture was considered. Several representative farmers were present to express their views and state their opinions as to the success or failure of the department.

Mr. Oliver F. Kilham, the present director of Agriculture under the Smith-Hughes act, gave some interesting figures on costs etc. of the department for the past three years. For those who were not able to be present and see these figures we are giving, in a condensed form, the greater part as given by Mr. Kilham. 3 yrs. district's share of salary, \$2,433.33; 3 yr. equipment, \$346.03; 3 yr. mileage, \$340.99; total 3 yr. expense, \$3,119.95 or a yearly average of \$811.11 for salary, \$115.34 for equipment, and \$113.50 for mileage, or a total average yearly cost of \$1,039.95, for a twelve months year.

During this 3 year period 86 students took project work with net profits of \$17,104.54 or an annual net profit of \$198.89 per student. The average annual cost per student for instruction was \$12.09 or a balance of \$186.80 per student. The value of the class room instruction and outside, or community, help of the director could not be very well estimated. In the course of the questions it was brought out that 38 were taking the Agriculture course and 50% or 19 students were coming from outside and paying the tuition of about \$60.00 each to take this training.

Mr. Kilham read several of the results from the projects performed by various students and their opinions as to the value of the course.

Mr. LeFevre expressed it as his opinion that the recitation periods could be shortened and thereby reduce the number of teachers necessary.

Mr. N. P. Nelson in the course of his talk brought out the fact that Newberg is essentially an agricultural town. Those who depend upon their labor are dependent upon the welfare of farming in the surrounding country. The city limits does not found the town but the trading distance. Those who may be in business and pay the greater part of taxes, are directly dependent upon the farmer. If taxes are higher the business man must charge his customers a little larger profit to meet them. Taking this into consideration, that the bills are paid either directly or indirectly by the farmer or ones dependent upon them Mr. Nelson asked, why shouldn't the coming generation of farmers be taught better management; better methods that they may be able to meet the future problems in a better manner than has been done in the past?

Mr. Chas. K. Hubbard said a few words expressing as his opinion the best method of putting farming on a par with other business, where it really belongs, is to teach the business methods of farming. This would in time, do away with the breach that seems to exist between those who derive their living direct from the soil by farming and others that follow other occupations.

Mr. C. W. Bradshaw gave as his reasons for wishing to see the agriculture department retained that the three fundamentals, shelter, food and clothing, all were dependent upon the soil. They who use none of the three are privileged to cast the first stone at what is for the betterment of agriculture. Mr. John U. Smith in the course of a short talk emphasized the fact that we cannot estimate the value of education. We are building a community, the communities make the state, the states form the nation, nations make civilizations whose acts become history. Yet the education or lack

of it among the individuals cause supposedly strong structures to crumble. Russia of to-day is a notable example. The consensus of opinion of those present seemed to be to economize as rigidly as possible but not to sacrifice the welfare of the schools and the education of the coming citizens to do it.

No wonder the Russians aren't anxious to do great things for their country. Whenever one does, Trotsky kisses him.—Chicago Herald and Examiner.

How Human Heads Differ.

Women have broader heads in comparison with their length, darker eyes and hair, and a less marked bony development of the skull, according to Miss Fleming of Aberystwith, who, according to the Daily Chronicle, gave the British association some facts and figures associated with her investigation of sex and growth features, and conclusions based upon an examination of 2,500 children and 1,000 women, mostly Welsh.

She had compared these with the figures of Professor Fleure relating to man. There was a marked tendency both in boys and girls to an inch more in width than in length of head. Re-examination showed that the vivid red hair of children changed into brown about the twelfth year. In the case of fair-haired children the darkening process began earlier in the case of girls than in boys.

How to Find Faults in Machinery.

If your automobile engine is not running as it should, and you do not know what the trouble is, get one of the new binaural stethoscopes and make a diagnosis, as a physician does when he wants to learn what the trouble is with the interior machinery of his patient. This improved device for detecting faults in running machinery has the advantage of possessing two ear-pieces which entirely exclude external noises. It has a jointed rod which is placed upon the part where the noise is suspected to be, and the noise is so magnified that the location and nature of the trouble can be quickly determined.

Why He Is Unpopular.

Mrs. Bunker—He sure is unpopular with the golfers since he worked so hard on his invention.

Mr. Bunker—What's the invention? Mrs. Bunker—A golf ball that registers the strokes during the course of the game, and there is no chance to lower the score.

The KITCHEN CABINET

Copyright, 1921, Western Newspaper Union.

Softly the evening came. The sun from the western horizon
Like a magician extended his golden wand o'er the landscape.
Twinkling vapors arose, and sky and water and forest
Seemed all on fire at the touch, and melted and mingled together.
—Evangeline.

WORTH WHILE DISHES.

After you have enjoyed Hubbard squash, baked and steamed and

mashed, the following dish will be worth while trying:

Souffle d Squash.—Take a medium sized Hubbard squash, remove the seeds

and the stringy portion and remove the rind. Place in a steamer and cook over boiling water until tender, then mash and season to taste with salt, pepper and butter. To two cupfuls of the mashed squash add gradually one cupful of cream and when well mixed, the yolks of two well-beaten eggs. Mix well, then fold in the whites of the eggs beaten stiff. Pour into a buttered baking dish and bake in a moderate oven until firm. Serve at once.

Bread Sponge Cake.—Take one and one-half cupfuls of sugar, three-fourths of a cupful of lard or any sweet fat, two well-beaten eggs, one-fourth of a cupful of sweet milk, two cupfuls of bread sponge, three cupfuls of flour and one-teaspoonful of soda. Add spices, raisins and a few nuts if liked. Mix well and when risen bake.

Stuffed Quinces.—Peel and core six quinces and place them in a baking dish with one cupful each of sugar and water. Fill the cavities with chopped nuts and raisins, cover and bake until tender; set away to cool. Serve with cream.

Golden Fleece.—Break in bits and melt in a frying pan one-half pound of cheese, adding one cupful of cream and a dash of cayenne. When smooth break over this mixture five fresh eggs, cover for two minutes; when the white is set, remove the cover, add salt and beat the mass briskly with a large spoon for a few minutes. It will rise in a yellow foam. Serve on buttered crackers or toast.

Peanut Butter Fudge.—Take two cupfuls of confectioner's sugar, one-half cupful of sweet milk, four table-spoonfuls of peanut butter; boil five minutes, stir until it thickens, pour into buttered pan and cut in squares.

THIS IS A STUDEBAKER YEAR

SPECIAL-SIX
Five-passenger, 50-horsepower
118-inch wheelbase
Cord Tires Standard Equipment
\$1475
f. o. b. factory

The intrinsic value and enduring quality of the Special-Six have won for it the hearty endorsement of thousands of owners. It will win you, too, when you consider:

- its comfort—seat cushions of soft, genuine leather, nine inches deep; long semi-elliptic springs, front and rear. Seats five without crowding.
- its power—L-head motor, 3 1/2 x 5, which develops 50 horsepower. Remarkable for its flexibility.
- its economy—low maintenance cost and infrequent repair shop attention.
- its beauty—body of harmonious lines built by Studebaker experts, with tailored top, which holds large plate glass rear window.
- its equipment—jeweled eight-day clock; one-piece, rainproof windshield with windshield wiper; tonneau light with extension cord; transmission lock which reduces rate of theft insurance to owner 15 to 20 per cent; one key locks tool compartment in left front door; ignition switch and transmission lock.
- its background—Studebaker's prestige and seventy years' experience in building quality vehicles assures complete satisfaction.
