CHAPTER V .- (Continued.)

paler than usual, and dark circles round her eyes gave evidence of a sleepless night. She opened her red lips to speak. and then, seeing Vickers, stopped ab-

"Well, what is it?" She looked from one to the other. "I

came for Doctor Pine."

Vickers, with the quick intelligence

of affection, guessed her errand. "Some one is ill?" "Miss Sylvia, sir. It is nothing to sig-nify, I think. A little feverish and hot.

and my mistres Vickers was down the ladder in an in-stant, with scared face. Pine caught the girl's round, firm arm. "Where have

Two great flakes of red came out in her white cheeks, and she shot an indig-

nant glance at Blunt. "Were you with the child last night?"

went on Pine. 'Not I have not been in the cabin since dinner yesterday. Mrs. Vickers only called me in just now. Let go my sir; you hurt me."

Pine loosed his hold as if antisfied at the reply. "I beg your pardon," he said, gruffly. "I did not mean to hurt But the fever has broken out in the prison, and I think the child has caught it. You must be carpful where you go.

Sarah Purfoy stood motionless for an Instant, in deadly terror. Her lips parted, her eyes glittered, and she made a movement as though to retrace her steps.

"Poor soul!" thought honest Blunt, "how ahe feels for the child! That lubberly surgeon, he's hurt her! Never mind, my lass," he said, aloud. It was broad daylight, and he had not as much courage in love making as at night. "Don't be afraid. I've been in ships with fever before now."

Awaking, as it were, at the sound of his voice, she came closer to him. "But ship fever! I have heard of it! Men have died like rotten sheep in crowded vessels like this."

"Tush! Not they. Don't be fright ened: Miss Sylvia won't die, nor you neither." He took ber hand. "It may knock off a few dozen prisoners or so. They are pretty close packed down What is the matter?"

"Nothing-a pain. I did not sleep last night. I have the toothache," said she, putting her hand to her face.

"Take some laudanum," says Blunt, with dim recollections of his old mother's treatment of such allments. "Old Pine'll give you some. No, I'll get it for you. You sha'n't ask that bear for it. Come into my cabla.

Blunt's cabin was in the starboard side of the ship, just under the awning, and possessed three windows—one look-ing out over the side, and two upon The corresponding cable on other side was occupied by Mr. Maurice Frere. He closed the door and took down a small medicine chest.

"Here," said he, opening it. carried this little box for years, but it ain't often I want to use it. Now, then, put some of this into your mouth, and hold it there."

"Good gracious, Captain Blunt, you'll poison me! Give me the bottle; I'll help myself. You need not fear. I've used it before." And she put the bottle in her

Her tears were all dry long ago, and had only given increased color to her face. This agreeable woman never wept long enough to make herself distanteful. She raised her dark eyes to his for a moment, with a saucy smile, and gain ed her cabin. It was next to that of her mistress, and she could hear the sick child feebly monning. Her eyes filled with tears, real ones this time.

"Poor little thing," she said; "I hope she won't die."

And then she threw herself on her hed and buried her hot head in the pillow. The intelligence of the fever seemed to have terrified her. Had the news disar ranged some well-concocted plan of hers? Being near the accomplishment of som cherished scheme, long kept in view, had the audden and unexpected presence of disease faisified her carefully made calculations, and cast an almost insurmountable obstacle in her path?

She die! and through me? How did I know that he had a fever? Perhaps I have taken it myself, I feel ill." She turned over on the bed, as if in pain, and then started to a sitting position, stung by a sudden thought. "Perhaps stung by a sudden thought. he might die! The fever spreads quickly, and if so, all this plotting will have been useless. It must be done at once It will never do to break down now, and taking the phial from her pocket. she held it up, to see how much it contnined. It was three parts full, "Enough for both," ahe said, between her set The action of holding up the bottle reminded her of Blunt, and she smiled," "I'll go through with it, and, if the worse comes to the worst, I can fall back on Maurice." She loosened the cork of the phial, so that it would come ouf with as little noise as possible, and then placed it carefully in her bosom. "I will get a little sleep if I can," she said. "They have got the note, and it shall be done to night."

The felon, Bufus Dawes, had stretch ed himself in his bunk and tried to aleep. But though he was tired and sore, and his head felt like lead, he could not but keep broad awake. The long pull through the pure air, if it had tired him, had revived him, and he felt strongary but for all that the fatal sickness

that was on him maintained its hold; The woman of whom they were speak-ing met him at the ladder. Her face was throbbed with unnatural heat. Lying in is narrow space, in the semi-darkness, he tossed his limbs about and closed his eyes in vain; he could not sleep. His utmost efforts induced only an oppressive stagnation of thought, through which he heard the voices of his fellow-convicts; while before his eyes was the burning Hydaspes-that vessel whose destruction had destroyed forever

trace of the unhappy Richard Devine. As yet there had been no slarm of The three seizures had excited ome comment, however, and had it not seen for the counter excitement of the burning ship, it is possible that Pine's precaution would have been thrown away. The "old hands," who had been through the passage before, suspected, but said nothing save among themselves. It is likely that the weak and sickly would go first, and that there would be more room for those remain-The "old hands" were satisfied.

Three of these old hands were conversing together just behind the partition of Dawes' bunk. The berths were five feet square, and each contained six men. No. 10, the berth occupied by Dawes, was situated in the corner made by the joining of the starboard and center lines, and behind it was a slight re cess, in which the scuttle was fixed. His "mates" were at present but three in unmber, for John Rex and a cockney tailor had been removed to the hospital. The three that remained were now in deep conversation in the shelter of the recess. Of these, a giant seemed to be the chief. His name was Gabbett. He was a returned convict. The other two were a man named Sanders, known "the Moocher," and Jemmy Vetch, the "Crow." They were talking in whispere, but Rufus Dawes, lying with his head close to the partition, was enabled to catch much of what they said.

At first the conversation turned on the catastrophe of the burning ship. From this it grew to sneedote of wreck and adventure, and at last Gabbett said something which made the listener start from his indifferent efforts to slumber into sudden, broad wakefulness.

It was the mention of his own name, coupled with that of the woman he had met on the quarter-deck.

"I saw her speakin' to Dawes yesterday," said the giant, "we don't want no more than we've got. I sin't goin' to risk my neck for Rex's fancies, and so I'll tell her."

"It was something about the kid," says the Crow, in his elegant slang. "I on't believe she ever saw him before."

"If I thort she was sgoin' to throw us over, I'd cut her throat as soon as look at her," snorts Gabbett, savagely. "Jack ud have a word in that," snuf-fles the Moocher; "and he's a curious

cove to quarrel with."
"Well," grumbled Mr. Gabbett, "and let's have no more chaff. If we're for

bizness, let's come to bizness." "What are we to do now?" asked the Moocher. "Jack's on the sick list, and the gal won't stir a'thout him."

"My dear friends," said the Crow, 'my keyind and keristian friends, it is to be regretted that when natur' gave you such tremendously thick skulls, she didn't put something inside of 'em. say that now's the time. Jack's in the 'orspital; what of that? That don't make it no better for him, does it? Not a bit of it; and, if he drops his knife and fork, why, then it's my opinion that the gal won't stir a peg. It's on his account, not ours, that she's been manoovering, sin't it?"

"Well!" says Mr. Gabbett, with the air of one who was but partly convinced, "I s'pose it is."

"All the more reason of getting it off quick. Another thing, when the boys know there's fever aboard, you'll see the rumpus there's be. They'll be ready enough to join us then. Once get the snapper-chest, and we're right as nine-penn'orth o'hapence.

This conversation had an intense interest for Rufus Dawes. Plunged into rison, hurriedly tried, and by reason of his surroundings ignorant of the death of his father and his own fortune, he had hitherto held aloof from the scoundreis who surrounded him. saw his error. He knew that the name he had once possessed was blotted out, that any shred of his old life which had clung to him hitherto was shriveled in the fire that consumed the Hydaspea. Richard Devine was dead-lost at sea with the crew of the ill-fated vessel in which-deluded by a skillfully sent letter from the prison-his mother believed him to have sailed. Rufus Dawes, alone should live. Rufus Dawes-the convicted felon, the suspected murderer, should live to claim his freedom. With his head swimming, and his brain on fire,

he eagerly listened for more. "But we can't stir without the girl," Gabbett said. "She's got to stall off the sentry.

The Crow produced a dirty scrap of paper, over which his companions eagerly bent their heads.

"Where did yer get that?" asked Gabbett.

"Yesterday afternoon Sarah was standing on the deck throwing bits o' toke to the gulls, and I saw her a-looking at me very hard. At last she came down as near the barricade as she dared, and throwed crumbs and such-like up in the air over the side. By and by a pretty big lump, doughed up round, fell close to my foot, and, watching a favorable opportunity, I pouched it. Inside was this bit o' rag-bag."

The writing, though feminine in char-

acter, was hold and distinct. Sarah had evidently been mindful of the education of her friends, and had desired to give them as little trouble as possible.

"All is right. Watch me when I com up to-morrow evening at three bells. If drop my handkerchief, get to work at the time agreed on. The sentry will

Rufus Dawes, though his eyelids would scarcely keep open, and a terrible lassitude almost paralyzed his Emba eagerly drank in the whispered sentence There was a conspiracy to seize the ship. Sarah Purfoy was in league with the convicts. She had come on board armed with a plot, and this plot was about to be put in execution.

True, that the head of this formidable chimera-John Rex, the forger-was absent, but the two hands, or rather animal heat under the blanket is pre-claws—the burglar and the prison break-vented. This is accomplished by haver-were present, and the slimly made, effeminate Crow, if he had not the brains of his master, yet made up for his flacold muscles and nerveless frame by a cat-like cunning and a spirit of volatility that nothing could subdue. With such ing animal heat passes off freely. To a powerful ally outside as the mock maid servant, the chance of success was enormously increased. There were one hundred and eighty convicts and but fifty soldiers. If the first rush proved successful, the vessel was theirs. Rufus Dawes thought of the little bright-halred child who had run so confidingly to meet him, and shuddered.

"There!" said the Crow, with a sneer-ing laugh, "what do you think of that? Does the girl look like disappointing us

There was silence for a minute or two The giant was plunged in gloomy abstraction, and Vetch and the Moocher interchanged a significant glance. Gabbett had been ten years at the colonial penal settlement of Macquarie Harbor, and he had memories that he did not confide to his companions. When he indulged in one of these fits of recollection. his friends found it best to leave him

Rufus Dawes was no longer stimulated by outward sounds, his senses appeared to fall him. The blood hushed into his eyes and ears. He made a violent, wain effort to retain his consciousness, but with a faint cry fell back, striking

his head against the edge of the bunk. The noise roused the burglar in an in stant. There was some one in the berth! The three looked into each other's eyes, In guilty alarm, and then Gabbett dashed round the partition.

"It's Dawes?" said the Moocher. "We had forgotten him?" "He'll join us, mate, he'll join us!"

ried Vetch, fearful of bloodshed. Gabbett, flinging himself on to the prostrate figure, dragged it, head fore-most, to the floor. The sudden vertigo had saved Rufus Dawes' life. The robber twisted one brawny hand in his shirt, and pressing the knuckles down, caught his arm. "He's been asleep," he "Don't hit him! See, he's not cried. awake yet."

A crowd gathered round. The glant to fall on his shoulder.

Gabbett took another look at the purpling face and the bedewed forehead, and then sprang erect, rubbing at his right hand, as though he would rub off something sticking there.

"He's got the fever!" he roared, with a terror-stricken grimace. "I've seen The typhus is aboard it before to-day. and he's the fourth man down!"

The circle of beast-like faces, stretched forward to "see the fight," widened at the half-comprehended, ill-omened word It was as though a bombshell had fallen into the group. Rufus Dawes lay on the deck motionless, breathing heavily. The circle glared at his body. The alarm ran round, and all the prison crowded down to stare at him. All at once he uttered a groan, and turn ing, propped his body on his two rigid arms, and made an effort to speak. But no sound issued from his convulsed jaws.

"He's done," said the Moocher, brutal-"He didn't hear nuffin'." The noise of the heavy bolts shooting back broke the spell. The first detachment were coming down from "exercise, The door was flung back, and the bayo-nets of the guard gleamed in a ray of eral planting as on small plats, and sunshine that shot down the hatchway. This glimpae of sunlight-sparkling at the entrance of the fetid and stifling prison-seemed to mock their miseries. was as though heaven laughed at them. By one of those terrible and strange impulses which unimate crowds, the mass, turning from the sick man, leaped toward the doorway. The interior of the prison flashed white with auddenly turned faces. The gloom scintillated with rapidly moving bands. "Air,

air! Give us aif!"
"That's it!" said Sanders to his companions. "I thought the news would rouse 'em."

Gabbett-all the savage in his blood stirred by the sight of flashing eyes and wrathful faces-would have thrown himelf forward with the rest, but Vetch plucked him back.

"It'll be over in a moment," he said. "It's only a fit they've got."

(To be continued.)

His Favorite.

After many years Remus returned to the old folks in the little Dixle cabin. There was much rejoicing.

"See, boy," said the old father, "yo am de prodigal en Ah am gwine to kill de fatted calf."

But Remus protested. "Fatted calf?" he echoed, "Hub! Donn kill no fatted calf foh dis child. Kill a fatted 'possum."

Clever at Handling Men. "How did that young stripling get that diplomatic position? Has he ever shown any diplomatic ability?"

"Yes, indeed! He landed the job."

-Detroit Free Press.

Horse Blanket.

A horse blanket particularly adapt ed to draft animals is the invention of a Seattle man. This blankel is so ventilated that undue accumulation of vented. This is accomplished by having openings in that portion of the The openings being at the highest point occupied by the blanket when arranged on the animal, the ris-

prevent water or snow from gaining iccess through these openings there is used a shield, which is supported above the openings by a skeleton wire frame. The reins for guiding the horse are held in place in the frame. The shield, which is made of fabric, is of greater width than the openings, thoroughly protecting the animal. Such a blanket would be suitable for livestock of any kind.

The Honey Muskmelon.

One of the astonishing things in vegetable growing or rather in growing vegetables for the express purpose of supplying the consumer, is the utter indifference shown by the grower to the matter of quality. The same prepared to deliver a blow that should thing applies to fruit. It would be forever silence the listener, when Vetch excusable if there were no other sorts. but when there are a dozen more or less far better than the varieties offered it is strange, indeed, they are relaxed his grip, but the convict gave not grown. A family well known to only a deep groan, and allowed his head the writer was especially fond of musk meions and bought them in large quantities until all that were offered them were so poor in quality they stopped using them and the producer lost valuable trade. The Honey melon, which has been tested for three years past, is one of the promising new sorts. It. is a nicely formed melon, the skingreen and the fiesh a yellowish green. The flesh is firm and deep and of a

HONEY MUSEMELON

sweet, spicy flavor, decidedly pleasing eral planting as on small plats, and there is no good reason why it should not, it will be a variety that should be extensively planted in all sections where the muskmelon may be grown. It will certainly please the consumer.

Allow for Corn Shrinkage.

In a letter to Wallace's Farmer David Fisher says: In your article on "The Cost of Holding Corn," you do not mention the important fact that elevators in the fall season of the year take eighty pounds to the bushel. Figuring a shrinkage of 15 per cent, it would take 117 bushels forty-six pounds at seventy pounds per bushel to give 100 bushels next May. At seventy pounds 117 bushels forty-six pounds makes 8,236 pounds. At eighty pounds per bushel you have but 102 bushels seventy-six pounds, which at 30 cents a bushel would give \$30.88 cash in hand. The interest on \$30.88 for six months at 6 per cent is 92 cents, making a total of \$31.80.

Scrub Lambs Unprofitable.

As a result of some investigations the Wyoming Experiment Station states that there is no real profit in putting small scrub lambs on expensive feeds and trying to finish them in a short feeding period. Lambs of better blood are needed for such intense feeding and only the picked class of most of the range lambs will do for fattening for short periods. There are probably no better or more practical feeds for fattening lambs in Wyoming than alfalfa and corn.

To Fight Ball Weevil.

Secretary Wilson, of the Department of Agriculture, asks in his report to Congress that \$105,500 be appropriated as the boll weevil item for the following year. It is proposed that the Secretary be authorized to expend the appropriation in such manner as he shall deem best, in co-operation with the State experiment stations and practical cotton growers. Of the special appropriation of \$195,000 which was made for the fiscal year ending June 30, 1000, \$105,000 has been used by the Bureau of Plant Industry in the study of cotton diseases, diversi-Scation and co-operation with the various experiment stations in extending the improved cultural methods. It is recommended that this appropriation be continued, not as a separate item, but as a part of the regular bureau funds. It is highly important, the Secretary of Agriculture adds, that the investigation on breeding of new cottons, the general propaganda work on improved cultural methods, the study of the diseases and diversification of crops, be continued and extended into other Southern States likely to be invaded by the weevil. The object of this appropriation is to cuable the department to continue this

I'll give the stock that came from them.

Wheat the Best Sheen Food.

Some of the experiment stations find that a pound of wheat in feeding has more nutriment than a pound of any other grain. In corn there is 8 per cent of digestible protein, barley 8.69 per cent, oats 9.25 per cent, rye 9.12, while wheat has 10.23 per cent. An English authority estimates wheat fed to lambs is worth about 76 cents per bushel. The Indiana station realized 77 cents a bushel for wheat fed to sheep.

Cure for Limberneck

For limberacck in fowls try one to blespoonful of copperas dissolved in each two gallons of drinking water. Maggots from decaying animal matter are said to produce limberneck in fowls. This is doubtful, but as a matter of precaution would suggest that any careass that may be around be burled.

Selecting the Boar.

In the selection of breeding swine more attention should be given to the question of early maturity and easy feeding qualities. The matter of selecting a boar is one of supreme importance. A neat head and ear, a nice coat with style and quality, are points of importance equal to those of size and bone.

Lincoln's First Election.

Lincoln's election to the legislature of Illinois in August, 1834, marks the end of the pioneer period of his life. He was done now with the wild careleasness of the woods, with the rough joility of Clary's Grove, with odd jobbs for his daily bread-with all the detalls of frontier poverty. He continued for years to be a very poor man, harassed by debts he was constantly laboring to pay, and sometimes absolutely without money; but from this time on he met and worked with men of wider knowledge and better trained minds than those he had known in Gentryville and New Salem; while the simple social life of Vandalla, where he went to attend the sessions of the legislature, was more elegant than anything he had yet seen .- St. Nicholas.
