BRIDEGROOM GETS EVEN.
Has Sport with the Crowd That Came to Charivari.
A good story is told on the boys who went to charivari Mr. and Mrs. Lou Reed on the night of their wedding last week at Redmond. A big crowd of youngsters and some who were not so young gathered before the home of Mr. and Mrs. Vic O'Connor, where the ceremony had been performed, and proceeded with the usual noise and racket. What was the surprise and chagrin of the groom had quietly slipped in with the "boys" and was pounding a tin pan with as much gusto and evident enjoyment as anyone. This was evidently the time when the bridegroom turned the tables and the joke was on the other fellows.

Finds Long Lost Watch.
Last Friday Adam Kozzman, while walking over land in the vicinity of his ranch, found a silver watch lying face downwards and partially embedded in the soil. The crystal was missing and was found, unbroken, about 15 or 20 feet from the watch. As the watch was picked up it started to tick and upon being wound ran a short time but finally stopped. The watch had been exposed so long to the sun and rain that the silver on the

back had taken on a blue tinge as also had the crystal. Mr. Kozzman is of the opinion that it has been lying where he found it for four or five years, and that it fell from the pocket of some one who was riding at a swift gait, judging from the manner in which the crystal popped off when the watch fell.

Attempted Murder at Prineville.
Bert Gilbert, a candy maker at Prineville, got crazy drunk last Wednesday from drinking absinthe, and in his delirium attempted to shoot his wife. In the tussle that ensued, she was able to defend herself until others arrived on the scene, called there by her cries for help.

Gilbert was arrested and put in the lock-up, whereupon he attempted to free himself by burning the jail. When the fire was discovered, Gilbert was found in an unconscious condition nearly suffocated by the smoke. Dr. Rosenberg worked over him for a long time and finally brought him back to consciousness. He was taken to the house where he had been boarding. That night he packed his few belongings in a light wagon that he owned, hitched up his one horse, and quietly slipped out of town. It is supposed he started for Klamath Falls.

BEND'S NEW SCHOOL

The Joy of the Scholars and Teachers.

THE PRIDE OF THE DISTRICT

School Opened Last Monday in the New Building with a Good Enrollment.

Bend's fine new \$6,500 school house was opened to use last Monday morning at the beginning of school, and is now daily filled with a crowd of scholars who are proud and happy in their new building. And well they may be. It is a building that every citizen of the district can feel just pride in, and in which they should take great interest. Situated on a high, commanding site, it has a fine view of mountains, river and buttes, and is easily seen by strangers coming into town from the north and east.

As you enter the building, you step into a wide, spacious lobby, opening from which are three school rooms and cloak rooms on the first floor. To your left is the room of the primary grades. Here Mrs. F. F. Smith presides. The room faces the south, with south and east windows. Its dimensions are 24 x 32 feet. A few steps farther down the lobby and on the opposite side, is the room of the intermediate grades, with Miss Marion Wiest teacher. This room is also a fine large one, with windows to the west and north, dimensions 24x34 feet. The principal's room, Miss Ruth Reid's, is at the end of the lobby, with windows to the east and north. Its dimensions are also 24 x 32 feet. The rooms are equipped with late-style single seats and have liberal blackboard space. Adjoining these three rooms with a door opening from the lobby and also one opening into the school room, are three large cloak rooms, one for each school room. In each of these is a modern washstand, which will be connected with city water in a few days.

Aside from the ventilation that can be obtained through the windows, each room has a patent ventilating contrivance near the top of the room and opening into an air chamber running from top to bottom through each of the two chimneys. Thus, with high ceilings, many large windows, and good ventilation, the two factors so necessary for the scholars' health and good work—an abundance of light and pure air—are amply provided.

The building is finished throughout with native pine, with a wainscoting around each room, the balance of the wall space being sealed with a tasty pine sealing. This makes a very clean and attractive appearance.

The three rooms on the second floor will not be finished until the growing needs of the district require it. School opened last Monday with an enrollment of 75, as follows: Miss Reid 16, Miss Wiest 23, Mrs. Smith 36. This is considered a very good enrollment for the first day.

SETTLERS TAKE ACTION.

Research on Columbia Southern Co.'s Segregation Employ Engineers.

On account of the unsatisfactory condition of affairs existing in the management of the Columbia Southern Irrigation Company, with headquarters at Laidlaw, the settlers on this company's segregation have employed a competent engineer to make a thorough survey of the company's canals and ditches, and also to report on the cost and advisability of building a reservoir to store the flood waters and winter discharge of Tumalo creek. If a favorable report is made it is very probable that a co-operative association will be organized by the settlers, who will purchase the Colum-

bia Southern Co.'s works. A. L. Aldredge is the engineer employed.

It is reported that at a gap in the canyon at the head of Tumalo creek there is what is supposed to be an old lake bed. It is said that this could be easily dammed and converted into a large reservoir, at very little expense. The crew under Engineer Aldredge left Thursday for this site to make a survey and report. If a reservoir is finally built, an ample supply of water for the segregation will be furnished.

It is also believed that a much better system of ditches can be constructed by putting in headgates at a point near where the Bend-Tumalo road crosses the Tumalo creek. Under the present arrangement with headgates on the creek about 15 miles above Laidlaw, the fall is altogether too great for good service. It is believed this can be greatly improved by tapping the creek lower down. The Columbia Southern Co.'s segregation lies on the west side of the Deschutes, with head-quarters at Laidlaw and obtains water for irrigation from Tumalo creek. This company should not be confounded with the Deschutes Irrigation and Power Company, which operates on the east side of the Deschutes and appropriates its water from Deschutes river.

The engineers who will make these surveys are working under orders from State Engineer Lewis, but the expense connected with this work will be paid by the settlers.

WILL UNDERGO OPERATION.

Irving Reed Awaits the Work of the Specialist to Restore His Sight.

Irving Reed and his sister, Miss Violette, are now in Portland where Irving has gone to undergo an operation with the hope of restoring his eye-sight. The specialist is very confident that this can be done. There has a filmy growth covered the eyeball and shuts out the light from the nerve somewhat as a window curtain shuts the light from a room. This growth will have to be raised from the eyeball and clipped, allowing the light to enter again through the pupil of the eye.

It can readily be seen how delicate an operation this will be. In the meantime, however, Bend friends are hoping that the operation will prove successful and that the unfortunate results of the explosion last December, whereby Irving lost his sight, will be at least partially overcome.

Redmond Fair Notes.

REDMOND, Or., Sept. 10.—Editor Bulletin.—Dear Sir: Please allow me to say just one more last word. We are getting ready to entertain all of the Bend people who come to the fair and show them a good time. Prospects are brighter all the time for good exhibits, good races and good crowds.

Please say to your readers that the Bulletin and other county papers will publish list of awards. Send us down a good delegation and have them stay right through. Musical entertainment the first night, farmers' institute the second night, closing with a grand ball on Saturday night.

Sports for the first day will be slow horse race, bicycle race for purse and three legged race.

Of course we had a little frost the other night but it did not spoil our farm produce. We expect to have Crook county grown tobacco on exhibition as well as sunflowers, egg plant, and tomatoes. Then we intend to surprise people as to the amount of thoroughbred stock of all kinds that we can show.

Entries are now being made, entry tickets made out and reserved until the exhibits are brought in.

Again with a last cordial invitation to all your readers to come, I remain, Yours very truly,

E. C. PARK.

MANY FINE SAMPLES

Laidlaw Has an Excellent Exhibit of Grains.

PROOF OF A FERTILE LAND

That Upper Deschutes Valley Soil is Very Productive is Amply Proved by This Year's Crops.

A Bulletin representative was in Laidlaw the first of the week and while there saw an exhibit of grain, grasses and vegetables that had been grown in that vicinity this year, an exhibit that adds much proof to the enthusiastic statements of settlers in this region that the upper Deschutes valley is one of the most fertile spots in the West.

For the benefit of The Bulletin's many readers living at distant points who are interested in this country but who are not acquainted with local geography, we will say that Laidlaw is situated on the west bank of the Deschutes river about eight miles north of Bend. The samples in many instances were grown on land lying between Laidlaw, Tumalo and Bend, and were raised on land that has been cultivated only a year or two. No region can make a better showing than has the upper Deschutes valley during the present season, and such exhibits as the one at Laidlaw give ample evidence of the truth of this statement. Following is a brief description of the samples of grain. All this grain produced heavy yields, the stalks being topped with large heads filled with fine, plump kernels of grain. The list follows: J. N. B. Gerking—Big Club wheat, 56 inches tall; Blue Stem wheat, 52 inches; Red Chaff wheat, 38 inches; winter oats, 5 1/2 feet tall with head clusters 20 inches long; alfalfa, 42 inches high.

E. M. Siry—Oats, 5 feet; rye, 8 feet.

G. W. Wimer & Sons—Alfalfa, 45 inches.

B. S. Cook—Red clover, 32 inches.

G. W. Moore—Velvet Chaff wheat, heads six inches long.

Columbia Southern Irrigation Co.—Shadeland Wonder oats, 48 inches; Eldorado King oats, 45 inches; timothy, 52 inches.

F. V. Swicher—Oats, 6 feet, 2 inches high.

Frank Murk—Timothy, 4 1/2 feet high with heads 9 1/2 inches long.

J. M. Patten—Barley, 4 1/2 feet tall on dry land without irrigation.

W. N. Ray—Beardless barley, 4 feet tall without irrigation.

A. D. Parks—Millet, sowed June 28 and on Sept. 3 stood 5 1/2 feet tall. Mrs. Parks has many fine ripe tomatoes.

W. W. Long—Corn, 8 feet tall; tame Lamb's Quarter, 8 feet tall with roots; good sized watermelons and large, fine Blue Victor potatoes.

Many of the best exhibits were at Boise, Idaho, on exhibition at the National Irrigation Congress. Those who were in attendance at this congress report that this exhibit was one of the very best there.

IT IS EASY TO KILL BEARS.

Sportsmen Now Hunt Them with Very Small Firearms.

A week or 10 days ago two young ranchers on Agency Plains shot and killed a 300 pound bear with only a 22-calibre rifle, and now comes the story of a nery man over on the Metolius who killed a bear and her cub the other day with a big six-shooter. It seems that it is getting to be no trick at all to kill big game. A. J. Harter, whose ranch is on the Metolius near Black Butte, was the nery man. His dog recently treed an old bear and her cub, whereupon he shot and killed them with his six-shooter. What's the use of lugging around a heavy 30-30, when an ordinary revolver will do the work.
