(Invariably in advance.)

FRIDAY, DECEMBER 7, 1906.

The Prineville Journal attempted to raise a great hulla-ba-loo last week by publishing a letter of instruction sent to various localities in Western Crook by the committee in charge of the move for a new mail route. The Journal's article caused much amusement among the committee men and was considered a comical but laborious effort to create "Much Ado About Nothing." If the Journal so desires, the committee can furnish it with more information that would be of interest to its readers.

Staid and conservative republican papers all over the land are attacking the old and venerable policy so dear to republican hearts, the sacred tariff, and are demanding that it be revised. They maintain that it is a refuge for the trusts and one of the chief causes for present-day trust monopoly. During the recent elections many "stand-pat" congressmen were defeated, one of the most notable ones being McCleary of Minnesota. Two years ago the writer heard McCleary explain to a bunch of Minnesota farmers how it was that American manufacturers could sell farm machinery cheaper abroad than at home. His argument was that the American farmer would have nothing but the very latest improved machines, and the surplus old pattern, machines were sold to the foreign farmer at a lower price! Fie! Fie! Evidently the farmers of Minnesota have gotten weary of such sophistry. The signs of the time are a sure indication that if the republican party desires to remain in power, those sacred tariff schedules must be greatly modified in many respects.

What Does It Mean?

The Klamath Falls Herald states that the preliminary work for the construction of a large power plant on Spence creek is under way. Surveys are being made for the canal, which will divert 100,000 inches of water from the Klamath river. The company back of the scheme are reticent as to their intentions, but it is believed that a proposition to build an electric railroad up the Klamath river is back of the move.

Timber Land, Act June 3, 1898.
NOTICE FOR PUBLICATION
U. S. Land Office, The Dalles, Oregon,
November 26, 1906.

Notice is hereby given that in compliance with the provisions of the Act of Congress of June 3, 1898, entitled "An act for the sale of timber lands in the states of California, Oregon, Nevada, and Washington Territory," as extended to all the public land states by act of August 4, 1898.

James Brown,

of Bend, County of Crook, state of Oregon, has this day filed in this office his sworn statement No. 300 for the purchase of the SW 1/4 of sec. 13, Tp. 15 N. R. 12 E. W. M.

And will offer proof to show that the land sought is more valuable for its timber or stone than for agricultural purposes, and to establish his claim to said land before H. C. Ellis, U. S. Commissioner, at his office in Bend, Oregon, on the 15th day of February, 1907.

He names as witnesses: Michael J. Morrison, Andrew Aune, Theodore Aune, Arne Aune, all of Bend, Oregon.

Any and all persons claiming adversely the above-described lands are requested to file their claims in this office on or before said 15th day of February, 1907.

Problems That Confront The Irrigator.

When Should Water Be Applied?

This is a question to which a definite answer can not be given, except that water should be applied before the plant shows distress. It therefore follows that the time when water should be applied can not be determined by watching the plant. Thrifty growth should characterize a crop from start to finish. Even a small degree of drought will induce some plants to enter upon maturing processes and then a new moisture supply may start an undesirable new growth rather than promote the old.

Many irrigators decide when their crops should be watered by an examination of the soil. A rule which has been frequently given is to take a handful of earth from a few inches below the surface and press it in the hand. If, when released, the soil holds together in a ball, and shows the marks of the fingers, irrigation is not necessary, but if it does not hold together water should be supplied. The time when crops should be irrigated depends, then, upon the nature of the crop, the soil, and the weather, so that no dates can be suggested for any locality.

The best sources of information on local practices are the agricultural experiment stations in the different states and territories, which are now very properly giving much attention to this subject.

A Danger in Irrigation.

Experience throughout the arid region is demonstrating that the greatest danger to irrigated lands is lack of drainage. Water applied to crops raises the ground water, which brings with it the salts dissolved from the soil; capillary brings this water to the surface, where it evaporates, leaving the salts to accumulate until all vegetation is destroyed. The only insurance against this is proper drainage. The drainage conditions are therefore equally important with the water supply and should be looked into with as much care. When there is not good natural drainage it must be supplied artificially. This, usually, is as expensive as securing the water supply.

While good drainage is the only guarantee against these evils, anything which will check the rise of the ground water or lessen evaporation will decrease the danger. The

one of the objects of the Alaska-Yukon Pacific Exposition is to make known and foster the vast trade of the Pacific Ocean.
