and the second second

Far away from the soft pure air, the bright blue sky, and glorious sunlight of Cornwall, in the close atmosphere of the gray, hazy heaven that emopies a low ondon neighborhood, on the same day, at the same hour, another child, a girl, sat in a squalld room; a strange, elf-like tooking child, with dark hair and eyes.

She also was gazing upon a picture but one of another kind to that which fascinated Arthur Penrhyddyn. It was only a common photograph taken upon It was a picture of herself; and never did a high-born beauty arrayed for a ball contemplate her reflected image in plate glass with more pleased attention than did this child of poverty that miserable inartistic sun-picture.

Now she held it straight before her. now obliquely, now in the full light, and now in the shadow; now she frowned and then she smiled. It was a Narcissa who had fallen in love with herself.

While she was thus engaged, humming a tune all the time, a stout, dirty-looking woman came into the room; but so absorbed was the child that she was unconscious of this presence until the in-

"What have you got there, Eleonore?"
"My picture," answered the child, without taking her eyes off the beloved object.

"Mother had it taken yesterday."
"She had better ha' bought berself a bottle of cough medicine, or ha' kept ber money towards her rent than have spent

It in such rubbish," retorted the woman, "But I wanted it, and I would have eried the child, with the air of a duchess who had been reproved for ex-

EFRVAGABOS. You're a nice young chit, you are! exclaimed the woman. "I'd buy you like-nesses, if I was your mather; I'd buy

od cane for your back." The girl answered, with a derisive laugh, "If any one was to beat me, I'd put poison in their tea—I'd smother them with the pillows when they were in bed-I'd put pins into their ears!"

Why, you horrible little wretch!" cried the woman, shrinking back involuntarily. "Ha! ha! ha!" laughed the child, clapping her hands; "you see, you, great, big weaman, are afraid of little me. But come here, Mrs. Drew," she went on, changing her tone to one of winning soft-ness; "come and look at my picture; don't you think I'm very pretty?" and she looked up with an arch, coaxing smile. All the malice had died out of her face, which now wore an expression of haby-like innocence.

"What a witch it is!" muttered the woman, who approached her shrinkingly, as though she thought her a thing "un-

"But am I not pretty, dear Mrs. Drew?" repeated Eleonore, still more eaxingly, and holding up the picture. shall be a fine lady some day, and ride in my carriage, and have such people as you wait upon me."

Here the conversation was interrupted by the entrance of a pale, consumptive looking, poorly dressed woman. "Mamma," cried Eleonore, running to

her, "Mrs. Drew won't tell me that I am pretty."

"That is because Mrs. Drew is afraid of making my little girl vain," answered of making my little girl vain," answered

her mother, stooping down and fondling "Oh, you're as had as she is," cried

Eleonore, pushing her angrily away; "I wish you were dead!" "I haven't patience with you, ma'am,"

eried the landiady; "you're ruining that girl. You'll have a heavy hand with her, and she so ungrateful for all your "Oh, the darling doesn't mean it; it is

only her pettishness," murmured the "I'd soon beat the pettishness out of

her if she was my girl," muttered the landlady, as she went out of the room. "I have come back to you with good

news, my darling," said the mother. "Your good aunt has sent us sufficient to take us away from this dreary place into "And shall I have fine clothes, and gold

wings, and necklaces, and slik dresses, and mervants to wait upon me?"

"You may not have all these, darling; but you will have a comfortable home and pure air."

"The rest, then, will come afterwards?
If they do not, I hope I shall die. I
would sooner be dead than poor. And re shall soon leave this house and Mrs.

"Hush, my darling! She has been very good to us. But for her we should often have been without food; and had she been harsh, as most tandladies are, we should have been turned into the streets. My Eleonore must not be ungrateful."

"But all this is over-we want no more favors from her now. She said she would beat me if I was her child; and ahe would not tell me I was pretty; and I hate her!" cried the child, vindictively.

Madame Soissons was the widow of Frenchman, an artist; who, two years before, had died, after a lingering illness, in very straitened circumstances. The match, which had been distasteful to her friends, had utterly estranged them

A weak-minded, nerveless woman, after her husband's doath she gradually fell into great poverty. A few weeks back, the clergyman of the parish in which she was lodging, who had taken a great in-terest in her, wrote to M. Boissons' friends, who resided in Brittany, to solicit their assistance in her behalf. The re-

sult of the application was the offer of a home for herself and child; and a suffi-cient sum of money was sent to defray their expenses to France.

"Kies me, Eleonore, before you go," said Mrs. Drew; who, although by means a refined, was a kind-hearted wom-

But the child, with a disdainful ges ture, swept past without answering, and jumped into the cab that was standing at the door, to convey them to the docks.

"Pray do not feel hurt at her rudeness, Mrs. Drew," said Madame Soissons, in a distressed tone; "she's only a pettish, spoiled child. God bless you! I shall never forget your kindness to me-indeed, indeed I shall not!"

"Poor soul!" muttered the landlady, as she watched the cab roll away; "she won't want kindness from anybody much But heaven help them that under-the charge of that child !-- I wouldn't have her to be crowned queen. What will she be if ever she lives to grow up?

CHAPTER III.

Wildly shricks the wind round the granite walls of Penrhyddyn, and the woods below sough and groan. Out of the gulflike heavens dart streams of forked flames, and the thunder rolls and crashes with a frightful din; and above the atmospheric war rises the boom and the roar of the angry waters.

It is a terrible night at sea; heaven help the ship that is near that from-bound coast. Groups of men are upon the cliffs, and among the rocks; some with flaring torches; others with lanterns that dot the darkness with spots of light. All eyes are turned seawards.

"There is a ship out yonder, I caught sight of her b ythe last flash, and you must all have heard the minute gu The speaker was Sir Launce Penrhyddyn, and his son Arthur stood beside him. "Get out the lifeboat; ten pounds to the man who is the first to volunteer."

"We must think of our own wives and children at home, Master Penrhyddyn," answered an old fisherman. could live for ten minutes upon that sea; there's not a man here would venture if you gave him ten times ten pounds."

Another glare of lightning. The small black object is nearer, larger this time, sunk luto a gaping pit, and rising high above, a tottering wall of wave threatens it with instant annihilation. Again the gons boom faintly, and the blackness doses over all.

Suddenly a cry arises from the hitherto silent group. By the flash of the light-ning all eyes behold the ship drifting with terrible speed towards the shore; above the voice of the winds and waters sounds s crash, and then a long, wailing cry of many volces.

the orders of Sir Launce, rockets are lighted. Upwards they rush, leaving a fiery trail behind, and fall into the sea; the ropes are hauled backwards, but no one is found clinging to them. Rendered fearless by strong excitement, master and servants venture down among the break-

With a blanched cheek, but a fearless heart, young Arthur stands beside his father, the water streaming off his fair hair, the sait spray almost blinding him.

"Quick! bring here a torch or a lansuddenly exclaimed Sir Launce; tern, something had struck against his feet more solid than the waves, and rested

In an instant two lanterns and a torch were upon the spot. It was something human-looking; that was all they could distinguish before a dash of spray struck the lanterns out of the men's hands, and washed out the light of the torch.

"Hear a hand, and let us carry it up on the cliffs," cried Sir Launce, and, assisted by one of the servants, lifted up the body and scrambled with it up the

rocks. Out of the reach of the waters they inid it down and discovered two bodies in stead of one-a woman, holding a child against her breast. In both, life seemed to be utterly extinct.

The woman's face seemed cut and bruised, and crimson marks still rested there; but the child was apparently untouched. When the black hair that clung ound her features, was brushed aside, the skin was white and spotless as mar-They tried to take her out of the woman's arms, but they could not release her from that convulsive death-grasp; and so two servants laid the bodies upon litter and carried them away to the

nearest fisherman's hut. Down the rocks again went Sir Launce and his son, and the remaining servants, to seek for other poor wretches that the waves might drift upon the shore. their labor was in vain; the sea disgorged no more of its victims. Before returning to the castle they stopped at the erman's but whither the woman and child had been conveyed. The woman had evidently been killed upon the rocks before drowning had taken place; her arms had so stiffened that they had difficulty in

releasing the child. To restore the lat-ter every known means had been used. "Have you found any articles upon them that might lead to their identity?"

inquired Sir Launce. "Nothing whatever," replied one of the servants. "Only this purse containing a sovereign, and a mark on the child's

"What mark?" "The word 'Eleonore," drew closer to the bed upon which the body lay. In the contour of that young face, framed by its jet black hair, he believed that he could trace a strong resemblance to the portrait hidden away

in the turret chamber.
"Take 'em away! I won't have 'em here!" cried a shrill, querulous voice behind him.

The speaker was an extremely old man, with long white hair, wild-looking eyes, and a face covered with a network of wrinkles. At his advance the two young fishermen who had assisted to bring the bodies, drew back from the bed.

"Take 'em away!" reiterated the old man yet more shrilly. "If you rob the sea of its dead, it will pay itself back at

"Shame upon your idle superstition!" exclaimed Sir Launce, stornly. "Would you commit an act of barbarity that would disgrace savages, for the sake of the wandering words of a madman?"
"I am no madman," answered the old

man, turning his face full Launce. "Because you are book-learned, you think you know all things; but I tell you, and I've proved it, the drowned and the drowning always bring a curse on the land that saves them. Take care you don't learn that lesson one day, Sir Launce Penrhyddyn!"

Were there any signs of life in either of the bodies. I would have them removed to the castle," said Sir Lannee. Then, turning threateningly to the young fish ermen, who stood listening to the dialogue with sullen looks, he said, "Remember, if any irreverence is shown to the corpses, you do not remain another day upon my land. Daniel, you remain here, and see that my orders are respected, and that tomorrow morning the bodies have Christian burial."

"They shan't rest here—they shan't rest here, for a hundred Penrhyddyns muttered the old man. "Let the curse fall on him, not on this roof. The sea shall have its own back again, if I give it back with my own hands!"

Towards morning the rage of the tempest had exhausted itself; the wind sob bed and mouned as though remorseful for the deeds it had done; but the thunder still growled threateningly, like some sated monster, and the lightning flashed fitfully over the turbid but subsiding WAVES.

In the east, the first faint streak of dawn touched with a livid gray the black volumes of cloud that were gradually drifting away, and its cold, ghastly light fell upon two bodies those of a woman and a girl-that lay stark and stiff in narrow cove about a mile from Penrhyddyn. The tide was rising; in a few minutes it would lift them in its emcrace, and carry them back again to the depths beyond.

Out of the piled-up masses of clouds dart the first rays of the rising sun. And the dead are hidden from its face, and the foaming waters dance in wild rejoicing

over the spot upon which they lay.

The old fisherman had worked his will, and given back to the sea its own again.

CHAPTER IV.

Ten years have passed away since the sight of the shipwreck, and the curtain rises upon the drama. It opens upon the 16th of August. The scene, the "Star and Garter," Richmond. The dramatis persons, a party of young men, aitting ver their dinner.

mistakably of the artist class, light hearted, jovial fellows, with flowing locks, shaggy moustaches, turn-down collars, and somewhat fantastic dress. There is one of the four, however, who has but little of the Bohemian in his appearance; he is the eldest of the party, a tall, handie man of some eight-and-twenty years, with dark-brown chestnot hair carling closely to his head, a pale complexion, twelve pounds of butter per cow in

and an open, generous countenance.

The fifth member of the party is a oung man in appearance, totally distinct from his associates. He is of slight fig-ure and dressed with a scrupulous neatness. He is extremely fair, with a color in his cheek as delicate as that in a woman's, deep violet eyes, wavy, light hair, cream. upon his face—a suffusion of melancholy almost boding in its depth; but, over all, an air of rare refinement, that denotes the gentleman by feeling and by birth. Arthur Penrhyddyn.

He is the host of the small party. He left Oxford at the end of the last term, and this little entertainment is in so nort a celebration of the event. guests are three young art students, Walter Brand, Peter Jerome and George Le-wasn't very much in demand. Its cul-iand; the fourth, the eldest, is Edward tivation was restricted to a few stalks Stafford, a portrait painter of some fame. Arthur has made their acquaintance in town during the college vacations.

(To be continued.)

Safe.

"You seem worrled," ventured the caller in the yellow editorial sanctum. "Yes, very much so," replied the editor. "You see, we published a some what exaggerated account of that new woman's club and now the president says she is coming up into this office to uall the lie."

"Ob. I wouldn't be worried." "Why not?"

"Because a woman doesn't know how to nail."

of the truck. From there it extends to a stake fixed in the ground and continues so as to connect with the hitching point. The stakes shown at the right and left should of course be fitted with pulleys -- Montreal Star,

Systems of Creaming.

Following extensive experiments in he effects of hand separator and gravty systems of creaming, the author of an Indiana bulletin draws these con-

1. The use of the hand separator in the place of the gravity systems of creaming will effect a saving of \$3.50 to \$7 worth of butter fat from one cow in one year. With the hand separator a richer cream and a better quality of cream and skim milk can be produced than with the gravity systems.

2. Of the gravity methods the deepsetting system is the least objectionable. It produces a more complete separation and a better quality of cream than either the shallow pan or the water-dilution systems.

3. Any neglect to thoroughly clean the separator after each separation re-They are five in number; four are un- duces the akimming efficiency of the machine and lowers the quality of the cream and butter produced. Wash the separator after each separation.

4. A trembling muchine, insufficient need, sour, curdled, slimy or cold milk, and over-feeding the separator caused a loss of butter fat in the skim milk amounting to from eight to one year.

5. Other things being equal, high speed and a small rate of inflow tend to produce a thick cream. Insufficient speed, a trembling machine and a large rate of inflow result in a thinner

Iowa's Pop Corn Belt.

Nearly half the pop corn consumed in the United States is raised in the small county of Sac, in the northwestern portion of Iowa. There it has been found that the soil is particularly adapted to its cultivation. Before the shows and the street corner merchants took it up the hot buttered pop corn on the farm that met the home de mund. A small quantity might be bought at the store, but it was high in price and the sales were few.

The breakfast food manufacturers are now the largest consumers of pop corn in the market. Nearly half of the ready-to-serve foods have a considerable percentage of pop corn. One brand is practically all pop corn.

Barb-Wire Wounds.

An excellent remedy for a cut is white lotion made by dissolving one ounce of sugar of lead and six drams of sulphate of zinc in a quart of was ter. Shake before using.

Booming the Egg Output.

That chickens have a great deal of intelligence is being demonstrated every day on the farm of Levi Van Etten and other farms near the place, where there is considerable blasting be-So accustomed have the fowls become hear the men yell, they hurry to cover. the egg product is on the increase.

In the spring of 1804 the Rhode Island Experiment Station decided to devote an acre of land to the continuous culture of corn.

The soil was partly a silt loam and partly a light sandy loam. The first two years only chemical fertilizers were used, the malutenance of soil bumus being placed upon the corn stubble remaining upon the field. The following two years half of the area was sown with crimmon clover at the time of the last cultivation of corn and half to rye, in order to compare the merits of a leguminous and nonleguminous crop as a means of maintaining soll humus. Beginning with 1808, after the experiment had been in progress four years, the first quarter of the acre plat was sown to crimson clover and the third quarter to winter rye at the time of the last cultivation of the corn, while the second and fourth quarters received no cover crop. In 1800 the land was limed to insure the success of clover. The history of the land is thing which was his and which I could given and the fertilizer treatment and have as a memento of him?" the results secured in each year are recorded.

A summary of the results during the twelve years the experiment has been conducted shows that the gain from using clover as a cover crop, after deducting the cost of the seed, was \$50.24, or an average of \$4.10 per acre annually, as compared with \$4.28, or an average of 30 cents an acre annually from using rye.

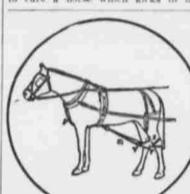

Grantum Hoga-

Cowpens without grain have so far given better results, it is stated, than any of the other crops tested at the Mississippi station. In 1903 the cowpens were grown on thin hill land and away and finally so weak that for six an acre produced 350 pounds of pork, months I could not get out of the In 1904 the crop was grown on good house. valley land and produced 483 pounds eleepless at night, and lame and see of pork per acre. The pigs were turned on the pasturage when the cowpeas were ripe and were fed no grain I bloated so badly I could not wear in addition to the pasturage. in addition to the pasturage.

Alfalfa without grain has found "to be little more than a maintenance ration for hogs." The pigs used in the test, which covered two years, ranged from three to twentyfour months in age.

Curing a Kicker.

An arrangement such as shown in the cut has been suggested as effective to cure a borse which kicks in har

ness. A beavy strap (P) is attached to the collar and extends back under the sureingle, where it is attached to a heavy ring.

Through this ring is passed a rope or strap (M), which is attached to straps on the hind hocks at S. This is made loose enough so that the animai may walk comfortably, but too tight to allow the animal to kick. After wearing this barness a while the horse will cease to try to kick in harness and may be driven without difficulty. -Farm and Home.

Black Teeth in Pigs. This condition is frequently brought

to our attention, but as yet we have no satisfactory explanation to offer for their presence. They are also found in health, as we have observed in heads at the slaughter houses Undoubtedly too much stress has been laid upon this condition. In young pigs, where this condition is most fre quently seen, long sharp teeth may be present which it would be better to cut off. Dentition may also be taking place and the black tooth may be a shell, and there may be irritation of the gums, causing the pig to hold the mouth open, to salivate and to refuse to est.-St. Louis Globe Democrat.

The principal test of whether the sow is a good milker or not is the condition of her pigs, and her condition while suckling them. If they do well and she eata liberally, keeps up good beaith and digestion, and at the same time gets a little thin while nursing them, ing done for the Erie's third track up it is pretty good evidence that she is the mountain, near Port Jervis, N. Y. a good milker, and will do to keep as long as her usefulness lasts. But look to the blasting and the warnings that out for the sow that fattens between precede them, that now, whenever they farrowing and wesning time. Her pigs either die or become runts, for she It is good exercise for the hens, and is not making good use of her feed that a good sow should.

Too Much.

There come times when the desire and need for a vacation are quite overbalanced by other things. When Mrs. Hanson had nursed the children of Berryville through an attack of scarlet fever, she resisted all suggestions from grateful parents that she go off for a mouth's rest at their expense.

"No," she said, with weary firmness, "I'm obliged to all, but I haven't got strength. I could either get ready and stay at home, or I could go without getting ready; but I couldn't do buth' anyway in this world."

No Diagram with This.
