

# RESUME OF MESSAGE

President's Communication Is  
Conservative Document.

## AIMS TO PLEASE ALL CLASSES

Would Delay Tariff Legislation Until  
After the Presidential Election—  
Wants Currency Changes.

No nation has greater resources than ours, and I think it can be truthfully said that the citizens of no nation possess greater energy and industrial ability. In no nation are the fundamental business conditions sounder than in ours at this very moment; and it is foolish, when such is the case, for people to hoard money instead of keeping it in circulation. The result of such hoarding is that the immediate occasion of money stringency. Moreover, as a rule, the business of our people is conducted with honesty and probity, and this applies alike to farms and factories, to railroads and banks, to all our legitimate commercial enterprises.

In the effort to punish the guilty, it is both wise and proper to endeavor so far as practicable to inflict punishment upon those who have been misled by the guilty. Yet it is not possible to refrain because of such distress from striving to put an end to the misdeeds that are the ultimate cause of the suffering, and as a means to this end, where possible to punish those responsible for them. There may be honest differences of opinion as to many questions of policy, but there is no question that such differences as to the need of unflinching perseverance in the war against successful dishonesty.

### INTERSTATE COMMERCE.

No small part of the trouble that we have come to ourselves arises in an extreme National virtue of self-reliance, of independence in initiative and action. It is wise to conserve this virtue and to provide for its fullest exercise, compatible with assuring that liberty does not become a liberty for wrong others. Unfortunately, this is the kind of liberty that the law of all effective regulation inhibits. The founders of the Constitution provided that the National Government should have complete and sole control of interstate commerce. There was then practically no interstate business save such as was conducted by water, and this the National Government at once proceeded to regulate in a thoroughgoing and effective fashion. Conditions have now wholly changed, and the law of commerce by water is insignificant compared with the amount that goes by land, and almost all big business concerns are now engaged in interstate commerce. As a result it can be but partially and imperfectly controlled or regulated by the action of any one of the several states, such action inevitably tending to be either too drastic or too lax, and in either case bringing about, for purposes of justice, only the National Government can in a thoroughgoing fashion exercise the needed control. This does not mean that there should be any extension of Federal authority, for such authority already exists under the Constitution in ample and most far-reaching form, but it does mean that there should be an extension of Federal authority. This is not an alarming consideration. It is merely a sobering fact in the face, and realizing that centralization in business has already come and cannot be avoided or undone, and that the public at large can only protect itself from certain evil effects of this business centralization by providing better methods for the exercise of control through the authority already centralized in the National Government by the Constitution itself.

### PURE FOOD LAW.

Incidentally, in the passage of the pure food and drug bill, commissioners showed in striking fashion how much good for the whole people results from the hearty co-operation of the Federal and state officials in securing a given reform. It is principally to the action of these state commissioners that we owe the enactment of this law, for they aroused the people here to demand its adoption, and then the State food and drug laws on the subject, and then the enactment of the Federal law, without which the state laws were largely ineffective. There must be closest co-operation between the National and state governments in administering these laws.

### CURRENCY.

In my message to Congress a year ago I spoke as follows on the subject: "I especially call your attention to the condition of our currency laws. The National currency has been greatly improved in aiding the enormous business development of the country, and within ten years there has been an increase in circulation per capita from \$21.41 to \$33.08. For several years evidence has been accumulating that additional legislation is needed. The present law of each crop season emphasizes the defects of the present law. There must soon be a revision of them, because to leave them as they are means to incur liability of business men and to bring about a general depression. There has been a fluctuation in the interest on call money from 2 per cent to 20 per cent, and the fluctuation was even greater during the preceding six months. The Secretary of the Treasury had to wait for a long time for any step in the most recent period of legislation. Even in a more recent period of legislation, the advance in commercial rates and the uncertainty felt in the sufficiency of credit at high rates. All commercial interests suffer during such periods. It would be well for the Federal Government to New York to attract money from the interior banks into the speculative field. This depicts the fund that would otherwise be available for commercial uses, and commercial borrowings are forced to a still higher rate. The last Fall a tax in the shape of increased interest charges, is placed on the whole commerce of the country."

### Need for Immediate Action.

I again urge on the Congress the need of immediate attention to this matter. We need a great slackening of the tempo of our progress, and the first step in this direction should be made by the most rigid examination by the National authorities. Provision should be made for an emergency currency. The emergency issue should, of course, be made with an effective guarantee, and upon conditions carefully pre-arranged in the event of a financial emergency. The bill must be based on adequate securities approved by the Government and must be issued under a heavy tax. This would permit currency being issued when the demand for it was urgent, while reducing its retirement as the demand fell off. It is worth while investigating to determine whether officers and directors of national banks should ever be allowed to buy and sell themselves. These companies should be subject to the same supervision as banks; legislation to this effect should be enacted for the District of Columbia and the Territories.

### THE TARIFF.

This country is definitely committed to the protective system and any effort to upset it could but cause widespread industrial disaster. In other words, the principle of the present tariff law could not with wisdom be changed. But in a country of such phenomenal growth as ours it is probable that in these years the tariff law should be carefully scrutinized so as to see that no excessive or improper benefits are conferred thereby, that proper revenue is provided and that our foreign trade is encouraged. There must always be a minimum a tariff which will not only allow for the collection of an ample revenue, but which will at least meet good the difference in cost of production here and abroad; that is, the difference in the labor cost here and abroad, for the well-being of the wage-worker must ever be a cardinal point of American policy. The question should be approached purely from a busi-

ness standpoint both to come and the scheme of the changes here and as to the removal of ministerial legislation and disturbance in the business world, and to give the least play for selfish and sectional motives. The sole consideration should be to see that the sum total of changes represents the public good. This means that the subject cannot with wisdom be dealt with in the year preceding the election. The result of such a period of fast experience has conclusively shown that at such a time it is impossible to get men to treat it from the standpoint of the public good. In my judgment the wise time to deal with the matter is immediately after such election.

### ENFORCEMENT OF THE LAW.

A few years ago there was loud complaint that the law could not be invoked against wealthy offenders. There is no such complaint now. The course of the Department of Justice during the last few years has been such as to make it evident that no man stands above the law, that no corporation or individual can escape it. It cannot be held to account that the Department of Justice has been as prompt to proceed against the wealthiest malefactor whose crime was one of greed and cunning as to proceed against the agitator who incites to brutal violence. Everything that can be done under the existing law, and with the aid of the power of indictment, which so profoundly influences both the courts and juries, has been done. But the laws themselves need strengthening in more than one important point; they should be made more definite, so that no honest man can be led unwillingly to break them, and so that the real wrongdoer can be readily punished.

### INJUNCTIONS.

Instances of abuse in the granting of injunctions in labor disputes continue to occur, and the resentment in the minds of those who feel that their rights are being invaded and their liberty of action and of speech unanswerably restricted increases. Much of the attack on the use of the process of injunction is wholly without warrant, but I am constrained to express the belief that for some of it there is warrant. This question is becoming more and more one of prime importance and unless the courts will themselves deal with it in an effective manner, it is difficult to demand some form of legislation which will afford a sufficient remedy for the present abuses.

The grain-growing industry of the country, one of the most important in the United States, deserves special consideration at the hands of the Congress. Our grain is sold almost exclusively by grades. The present system of inspection and grading results in the greatest waste of time and labor, and causes unnecessary expense to the farmer in marketing his grain. The grain-growing industry of the country, one of the most important in the United States, deserves special consideration at the hands of the Congress. Our grain is sold almost exclusively by grades.
