Be a "New Farmer."

The farm problem of America is not in bursting barns nor high bred stock. "Friend," asked the masculine half of nor soil fertility, nor even in the rural the party in the runabout, "what road is school, but in the farmer himself. Its solution is in the individual known as "This is lovers' lane, sir," said the nathenatine new farmer. The dreary drudgery tive; "and it ends down there in the bend of the old farm existence is fast passof the river they call the devil's elbow."— ing away, and in its place is coming a Chicago Tribune. broad, rich, free livelihood, never known before "the new country life." The Pennsylvania are leading the van in new farmer lives the new country life; the new farmer builds for his wife and children a modern, sanitary, attractive roads. He installs a telephone, receives his mail by free delivery and encour. While any person of sense realizes that ages interurban service, supports a thriving rural church and demands an efficient consolidated school with a high school course for his sons and daugh-"Convicts seem to very polite sort ters at home. The new farmer reads and thinks; he studies his own environment, sees his opportunity and limitations; improves the one and removes "Sure; they never do wrong without the other. The new farmer is not only a scientist, but a sociologist. He works in harmony with his neighbors for the general good and uplift of his immediate community, and above all else he realizes the dignity and importance of his own profession and individuality is the permanent and national welfare.

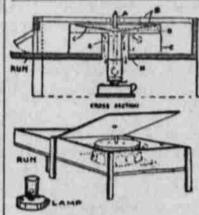

Curry the Cows.

It is profitable to groom cows, espe-cially in the spring. This is done in the same manner that a horse is curried and brushed, and the work as thoroughly done as if grooming a good horse. The cows are curried with a sharp currying comb until the loose hairs are combed off and the dandruff on the skin is loosened. They are then rubbed down with straw and afterward with a rub rag until the cont is smooth and glossy. This opens up the pores in the skin, sets up a healthy action in the small blood vessels just under the skin and belps a great deal in a direct way in putting the cows in good condi-

Give the cows plenty of outdoor air as soon as the weather moderates, but do not compel them to stand out in the rain. Keep them in the yard until the grass is well started, for the first blades kitchen stairway with his arms full of are too watery to furnish nutrition, and "Hoy," said the mistress of the house, pasture until it is well started. Any "Yes'm," he answered, still climbing the stairs. "It's only me shoes that's dirty."

The grant of forage made in this way will be paid for later by the shortness of the grant or later by the grant or l saving of forage made in this way will the grass when it is most peeded.

How to Milk a Cow.

Cows are always milked from the off. or right, side because they have been taught that way. A cow can be milked from either side if she is brought up right, but the lessons must begin at the earlist handling of the heifer. Milk first from one side and then the other, tection to the plants, some of its richand in a short time the heifer will not mind. It often comes handy to milk ering will cause the manure to become man looking for a storm cellar."—Bir from the left side and cows should be will make a pet of his cow will have There is little danger of scattering too no trouble and will get greater benefit at milking time than the one who treats her as a stranger, if not an enemy.-Field and Farm.

Eggs, Fresh and Otherwise,

Information comes from Secretary of Agriculture Wilson that henceforth eggs styled "fresh" or "strictly fresh' must live up to their profession. Storage eggs must be labeled as such. If this rule is rigidly enforced-and the States of Nebraska, Minnesota and punishing violators of the law-there will be some queer experiences. It is a well known fact that many persons home; the new farmer makes hard have been eating eggs two years old under the caption of "strictly fresh." "strictly fresh" eggs are almost unobtainable in midwinter and that the de velopment of cold storage facilities has been a boon to the consumer, it goes without saying that free-born man has a right to know what he is getting for his money. Then if he prefers eggi under the ban, let him have them.

For Harvesting Fruit.

Farmers and other persons with fruit orchards will find much to com mend in the invention of an Indiana

man, which makes the gathering of apples, pears and penches a far easier and quicker propo sition than it has been heretofore. This invention is simple enough, but, like many other simple expedients, it remained up thought of until recently.

APPLE PICKER. The contrivance is of metal, made on the principle of a pair of scissors, except that where the point of the scissors would come there is on one side a disc and on the other a circular opening into a long bag, which is attached to it. The handles of the harvester are hollow, so that they will fit over the pointed ends of poles, which may be of any length required. By means of this device a person standing on the ground can reach fruit otherwise in inaccessible places, and by compressing the bandles can snip the fruit from the limbs into the bag. In this way fruit can be plucked before it falls to the ground and becomes bruised.

Chicks must be kept clean either with hens or in a brooder. To clean them every day is not too often. The heat from the brooder makes droppings produce foul air, ar do bens when brooding chicks. Give no feed until the clutch is at least thirty-six hours old. They do not need it for the yolk absorbed just before hatching provides them until that age. Leave them in the incubator or under hens until ready to give the first feed, which should be fine gravel or sand on the bottom of the coop or brooder. They will eat quite a lot of it, and it provides the gizzard with grit to grind food.

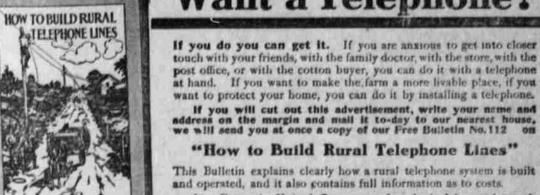

Care of the Young Horse Work with young horses intended for next season's work while you have time this winter. Halter and stall them. groom them daily and harness them frequently, so that they become accustomed to your working with them. It requires time for the young horse to find out many things required of it in regular work. If it is first taught the feel of the halter and barness there will be less for it to think about when It is hitched up for work. A well broken horse is worth much more than one poorly broken. In selling the horse that is the first inquiry of the buyer.

Mulches of Manure.

During January and February heavy nulches of stable manure may be placed about perennial fruits and vegetables. The manure will act as a pro ness will soak into the soil and weathmild, so that it may be safely used for any of the garden crops next spring. much manure in our gardens and orchards.

Government Experiment. The farmers of the country surrounding Shreveport will this year Give all farm animals good warm plant 250 acres in peanuts, at the innever after make the animal that it periment.—Beaumont Journal.

Want a Telephone?

In a Farmer's Mutual Company a few day's labor and a cash investment of about \$25. per subscriber, will purchase all material and build an absolutely standard system. A Rural Telephone is an investment, not an expense. The telephone which enables you to sell ten bales of cotton at 1/2 cent per

This Book Sent Free pound more than the traveling buyer offers you, has paid for its entire cost. If you have some hay down all ready to go in, it is worth something to have a telephone with which to call on Neighbor Smith "for a lift" before the storm breaks.

The Rural Telephone pays for Itself each year and we have brought the initial cost within the reach of every farmer. Present prices are especially favorable and thousands of Farmers' Mutual Companies are now organizing so as to build their lines this Spring. Write us to-day.
