The Great Spring Medicine

In thousands of homes, for more than thirty years, Hood's Sarsaparilla has been taken, as a Spring Medicine, by every member of the family.

Peculiar to Itself in what it is and what it does, it combines the best blood purifiers, appetizers and tonics, and effects complete cures of

Spring Ailmenta-all blood diseases, pimples, eruptions, eczema, serofula, all stomach, liver and kidney complaints, loss of appetite, that tired feeling, all low or run-down conditions of the system.

Hood's Sarsaparilla effects its wonderful eures, not simply because it contains sarsaparilla, but because it combines the utmost remedial values of more than 20 different ingredients, each greatly strengthened and enriched by this peculiar combination. These ingredients are the very remedies that successful physicians prescribe for the same diseases and silments. There is no real substitute for Hood's Sarsaparilla. If urged to buy any preparation said to be "just as good," you may be sure it is inferior, costs less to make, and visids the dealer a larger profit.

Begin taking Hood's Sarsaparilla today, in the usual liquid form or in the chocolated tablets known as Sarsatabs. 100 Doses One Dollar.

THOUSAND HEADED KALE.

Winter Months.

By H. D. Scudder, Oregon Agricultural College, Corvalia.

This kale is chiefly valuable as a green feed for hogs, cows or poultry through the winter from November or October to April. The better types of planta endure the Willamette valley winter weather without injury, yielding from 30 to 40 tons of succulent and nutritious green feed per acre under favorable conditions. It may also be grown for summer green feed, although less successfully.

A deep, well drained, rich loam soil is best for this crop but the ordinary valley clay loam soil, if well drained, thoroughly tilled and heavily manured, will produce excellent yields. If possible a long, narrow, slightly sloping field, running lengthwise of a piece of sod ground, or a wide sodded fence row, or one of the farm lanes is preferable, as this permits easier hauling during the wet winter weather.

The kale ground should be heavily manured and deeply plowed in the fall if possible and replowed once early in the spring and again before transplanting. If the fall plowing cannot be done, manuring during the winter and spring and deep early spring plowing repeated twice before transplanting, will put the ground in good shape. Following the second plowing the ground should be kept clean of weeds and thoroughly reulched to conserve the moisture, by frequent light harrow-

ing until transplanting time. For transplanting the seed should be sown in drill rows about three feet apart, as early in March as it is possi-ble to get on the ground. If possible a strip of the best drained ground on the farm should be used for growing the young plants and this should be manured and plowed in the fall so that it need only be replowed and worked down at once for the seed in the spring, thus getting the plants started as early as possible. One pound of seed will furnish enough plants for an acre.

June 1st, if possible, when the plants are six to twelve inches high. Later transplanting is liable to be held back by the dry weather so much as not to be ready for cutting in early fall. With the ground in fine tilth, trans-planting of small acreages may be done rapidly by hand with a long bladed spade, care being taken not to injure the roots in taking them up from the drill row, and replacing them in the new ground. They should be placed capacity and for the installation of three feet apart each way, covered a little deeper than in the drill row, the soil firmed around them with the foot and later when wilted down, the whole

field should be rolled. Plants should be left every three feet in the original drill rows and all extra plants saved for replacing those that may not survive transplanting.

Transplanting of larger acreages may be done by plowing and placing the plants three feet apart in every third furrow, covering the roots but not the leaves, with the next furrow turned and following the day's work with a roller. Missing plants may be stastic "sour doughs."

Instead of transplanting the seed may be dropped in hills three feet apart each way, several seed to the hill, as early as the ground can be thoroughly prepared. Later each hill should be thinned, leaving one vigorous plant. As a rule this method does not give as good yields as transplant-

transplanting or thinning th

ant that the grower should select five Has Proven Valuable for Feed During them go to seed. From 20 to 50 different types of kale plants have been grown from one small packet of com-mercial seed, the majority, however, are worthless. To get good seed the grower must select a good parent plant; are of good size, weighing from 40 to 50 pounds each, with a medium sized, smooth green leaves, the main stem branching out close to the ground into innumerable stems and leaves in all stages of growth. Only plants which go through the severest frosts without any injury should be selected. These plants selected during the first year should be transplanted early in the spring the second year in some

fertile spot where they will not be cross pollinated by other kale plants, wild turnips, rape, mustard and similar c osely related plants. The seed will be formed this second year and should be harvested when the plant has dried out and the seeds are brown and threshed out by hand over a canvass. One good plant will furnish sufficient seed

for about an acre of kale plasts. A report of your success or failure in growing kale, with a description of your method and conditions, would be greatly appreciated by this station. Kindly address such report to the De-partment of Agronomy, Oregon Agri-cultural college, Corvallis, Oregon.

Notes on the A.-Y.-P.

Enough electricity will be used in the decorative features of the Alaska-Yukon-Pacific exposition to supply all the needs of a city of 40,000 inhabitants.

Eight hundred thousand eight-candle power incandescent lamps are used in the decorative features of the Alaska-Yukon-Pacific exposition, which opens in Seattle on June 1.

The Great Northern railroad estimates that not less than 1,000,000 persons bound for the Alaska-Yukon-Pacific exposition in Seattle this summer, will be handled through St. Paul alone.

The government is spending \$600,-Transplanting should be done about 000 that it may give due representa-tion to Alaska, Hawaii and the Philippines at the Alaska-Yukon-Pacific exposition which opens in Seattle June 1. The Alaska-Yukon-Pacific exposition will be ready to open on May 1, one month before the day fixed for its formal opening. It is the first expsition to make good upon its original
