Good Blood

Means good health, and Hood's Sarsaparilla has an unapproached record as a blood-purifier.

It effects its wonderful cures, not simply because it contains marsaparilla but because it combines the utmost remedial values of more than 20 different ingredients. There is no real substitute for it. If urged to buy any preparation said to be "just as good" you may be sure it is inferior, costs less to make, and yields the dealer a larger profit. Get Rood's Baraaparilla today. In testal liquid furm or in choculated tablets known as Baraatabs.

BRIGANDS OF TONKIN

Lives of Native Soldiers Too Preclous to Risk Against Them. The outlaws of Tonkin whom the French called pirates, are, properly speaking, brigands, who infest the ountry both on land and water.

One of their resorts is the province f Bacuinh, where they have just murdered a French officer. There the brigands openly and successfully defy the forces of the government. Long immunity in that quarter has made them numerous and formidable. This need arouse no wonder, considering that the troops in the field consist of native soldlers whose lives are too precions to be risked in frontal Mf-

UNSANITA IY CONDITIONS.

Water Supply in Many Cases Found Unnecessarily Polluted.

E. F. Pernot, Oregon Agricultural College, Corvaille. The condition in which I find water

received from various parts of the state warrants my calling the attention of the public to the unsanitary conditions which must exist surrounding their water supply. Some samples of water taken in storile bottles under asceptic precautions, contain as high as 63,580 germs per cubic centimeter (a teaspoor holds about five cubic centimeters of water and an ordinary drinking glass about 225 cubic centimeters). A glass ful of such water would therefore contain 14,305,500 living germs. While it is true that many varieties of these germs are not directly disease produc ing, the continued introduction of such large quantities of them into the sys tem lowers vitality and increases sus ceptibility to the disease producing types when they gain access to the body. Water containing so many or ganisms carries also, in solution, the ptomaines from the putrefaction of the organic matter in which they grew. These large number of organisms generally find their way into open wells by surface drainage and where they can pass, so may the disease producing types pass also.

The waters from driven wells are comparatively free from organisms. An open well is an abomination and is not in keeping with our present understanding of the laws of sanitation.

The question arises, how can we better our condition. Where a well is the only means of obtaining water, let it be dug to the water bearing stratum, wall it up with brick laid in cement for ten feet, arch it over with the pump pipe and arch well cemented in, fill the remainder of the hole, which may be 15 to 20 feet, with clay well tramped down and the result will be a bottomless brick jug, deep under ground, into which no surface water, worms nor animals can penetrate. The water from such a well is as pure as can be obtained from the locality in which it is situated.

There are many families living in the country who should enjoy the best of health, but who are always ailing. The cause of ill health may, as a rule, be traced to their use of polluted water produced by the unsanitary condition of their surroundings. But few homes have proper drainage from sinks and baths, dish water is thrown out of the back door on the ground near the well, garbage is similarly disposed of to de compose and drain into the well. Wash water containing filth that would not be tolerated on the clothing is also emptied on the ground to drain into the well. Most of the open wells situated near the house or barn are but cesspools. It is the lowest point in its vicinity into which liquid's drain. Frequently a privy is located within a stone's throw of an open well. When the water table rises to the surface of the ground, as it always does during the winter in Western Oregon, all surface water is contaminated, and, as the water level lowers, the open wells become reservoirs for the drainage.

The ordinary stone or brick wall of an open well only serves the purpose of preventing the caving in of the earth and in no sense acts as a filter. We have received samples of water from open wells, situated near barnyards or dwellings, which were loaded with organisms that are instrumental in decomposing manure. The samples gave strong reactions of ammonia by American Revolution, has been particular sample was thus polluted It is well known that milk is an inout in the society for many from a flower bed near the house, the ideal food for typhoid bacilli, and for

Save the Babies.

NFANT MORTALITY is something frightful. We can hardly realize that of all the children born in civilized countries, twentytwo per cent., or nearly one-quarter, die before they reach one year; thirtyseven per cent., or more than one-third, before they are five, and one-half before they are fifteen!

We do not hesitate to say that a timely use of Castoria would save a majority of these precious lives. Neither do we hesitate to say that many of these infantile deaths are occasioned by the use of narcotic preparations. Drops, tinctures and soothing syrups sold for children's complaints contain more or less opium, or morphine. They are, in considerable quantities, deadly poisons. In any quantity they stupefy, retard circulation and lead to congestions, sickness, death. Castoria operates exactly the reverse, but you must see that it bears the signature of Chas. H. Fletcher. Castoria causes the blood to circulate properly, opens the pores of the skin and allays fever.

Letters from Prominent Physicians addressed to Chas. II. Fletcher. Dr. A. F. Peeler, of St. Louis, Mo., says: "I have prescribed your Castoria

in many cases and have always found it an efficient and speedy remedy." Dr. E. Down, of Philadelphia, Pa., says: "I have prescribed your Castoria in my practice for many years with great satisfaction to myself and benefit to my patients."

Dr. Edward Parrish, of Brooklyn, N. Y., says: "I have used your Cas toria in my own household with good results, and have advised several patients to use it for its mild laxative effect and freedom from harm."

Dr. J. B. Eillott, of New York City, says: "Having during the past siz years prescribed your Castoria for infantile stomach disorders, I most heartily commend its use. The formula contains nothing deleterious to the most delicate of children."

Dr. C. G. Sprague, of Omaha, Neb., says: "Your Castoria is an ideal medicine for children, and I frequently prescribe it. While I do not advocate the indiscriminate use of proprietary medicines, yet Castoria is an exception for conditions which arise in the care of children."

Dr. J. A. Parker, of Kansas City, Mo., says: "Your Castoria holds the esteem of the medical profession in a manner held by no other proprietary preparation. It is a sure and reliable medicine for infants and children. In fact, it is the universal household remedy for infantile ailments."

Dr. H. F. Merrill, of Augusta, Me., says: "Castoria is one of the very . finest and most remarkable remedies for infants and children. In my opinion your Castoria has saved thousands from an early grave. I can furnish hundreds of testimonials from this locality as to its efficiency, and merfis."

Dr. Norman M. Geer, of Cleveland, Ohio, says: "During the last twelve years I have frequently recommended your Castoria as one of the best preparations of the kind, being safe in the hands of parents and very effective in relieving children's disorders, while the case with which such a pleasant preparation can be administered is a great advantage."

prominent in the society for many from a flower bed near the house, the years and has carried on an aggressive flower bed having been heavily mafight for the presidency, against re nured. ports that she was physically incapacitated for the duties of the office. She has been supported by the outgoing officers of the society and by the lilluois members, her home being in Bloomington, Ill. She comes from dis-

ringuished revolutionary stock on both her father's and mother's side. As vice president general from Illinois her services on the national board have been notable and she has been a leader in Illinois. Mrs. Scott is the widow of a coal mine owner and the, mother of Mrs. Bromwell, wife of Colonel Charles S. Bromwell, for the last four years in charge of government buildings in Washington.

man may like his friends, he likes them a little less if they make suggestions to him of ways for parting with his money.

In localities where water is piped into the house and there is no sewer, the toilets should be connected with a properly constructed septic tank and the effluent should be piped a long distance dead animals by throwing their carfrom the well and empty on the surface of the ground, where sun and air may still further purify it. If an open closet must be used, a concrete vault, well cemented, should be constructed, instead of a mere hole in the ground, and lime frequently thrown into it to preoffense. went the breeding of flies. Earth clos ets have been very successful and con-sist of galvanized iron trays or tubs

that may be emptied away from the premises; dry earth or ashes should be used in connection with them to absorb moisture and suppress odor.

It is well known that flies breed in human and animal manure; for example, the deposits of human excreta are often seen to be a crawling mass of maggots, these are the larvae hatched from the ergs deposited by flies, from this they pass into the pupa stage and again emerge as flies with the return of warm weather. These flies enter our dwellings, walk upon our food and directly transmit the organisms from excreta to our food. Contanimation does not cease at that, for we have definitely proven that the organisms which the flies take into their bodies from the excreta are not destroyed by their digestion, and passing from their bodies with the excreta the germs utilize this excrets for food and multiply. Therefore a fly speck containing fifty germs will increase its numbers fifty-

fold. If perchance the organism happens

to be the typhoid bacillus, a fly speck upon an apple, or other food, will eventually contain thousands of germs.

from the invasion of flies. Keep flies the shotgun

out of the house, especially that part where food is kept.

Attention should also be called to bearing strata will be polluted for miles. Typhold fever is a filth disease and any person who thus pollutes a water supply commits a criminal
