TIPS FOR ROAD BUILDERS.

Go over the whole of the new laying every day or two with the rake and never leave the stone in ridges.
If you have no ring gauge remember Macadam's advice that any stone you cannot put easily into your mouth should be broken smaller.
Use chips for binding newly laid stones together and remember that road sweepings, soda or grass and other rubbish when used for this purpose will ruin the best road ever constructed.
Remember that water worn or rounded stones should never be used upon steep gradients or they will fail to bind together.
Remember that the middle of the road should always be a little higher than the sides, so that the rain may run into the side gutters at once.
Never allow the water tables, gutters and ditches to clog up, but keep them clear the whole year through.
Always be upon your road in wet weather and at once fill up with chips any hollows or ruts where the rain may lie.

WHAT BETTER ROADS BRING.

Values Increase, Population Grows and Social Conditions Improve.

There is a corresponding tendency of population to increase, and in its turn this tendency strengthens the demand for more good roads, social conditions improve, and the life of the community is influenced in numerous ways. Where there are good roads the farm increases in value partly because the cost of hauling is decreased. The reduction may be largely due to increased speed in haul-
