

Farm and Garden

GOOD POINTS OF THE MULE.

Long Eared Hybrid Better Than the Horse in Many Ways.

The mule's ability to take care of himself makes him very desirable where much hired help is employed. You cannot irritate him as you can a horse. He will take a good, steady gait and keep it. Many hands will jerk and yell at a horse until he loses more flesh from the excitement than from the work, but not so with the mule. He will pursue the even tenor

THE MULE ON THE FARM.

of his way and pay little attention to the noisy driver, says a correspondent of the Orange Judd Farmer.

In hot weather it is almost impossible to hurt him, and he does not sweat nor pant, as does the horse. A mule seldom gets into trouble, for he seems never to get scared. If he kicks over the tongue or gets his harness fast he either gets loose quietly or waits for the driver to get him out of the difficulty.

One of the especially good points of the mule is his excellent health. A sick mule is rare indeed. He will not overeat nor drink too much when warm.

A mule does not require as much concentrated feed to keep him in good flesh as does a horse of corresponding weight. The mules at Lakeside farm, near Storm Lake, Ia., where I was employed, were fed eight pounds of shelled corn and a generous supply of timothy hay per day. That kept them in as good flesh as horses on heavier feed, and they did more work than the 1,000 pound drafters receiving ten pounds of shelled corn, eight pounds of good oats and good timothy hay. Mules will consume more roughage than horses and less grain. Give them plenty of hay and they are about satisfied.

ONE IDEA OF GOOD FARMING.

"Sambo, is your master a good farmer?"

"Oh, yes, massa; fusa rate farmer. He make two crops in one year."

"How is that, Sambo?"

"Why, he sell all his hay in de fall and make money once; den in de spring he sell de hides of de cattle dat he for want of de hay and make money twice."—Farm and Home.

Mixed Ensilage.

Red clover or alfalfa when green may be mixed with corn and a very satisfactory silage produced. If there is an abundance of corn for filling the silo we rather favor curing the alfalfa and clover and putting the corn into the silo. Lucerne make a very good grade of silage, but in the process of fermentation, owing to their high protein content, they develop a very objectionable odor, which is not at all injurious to the animal, nor do they produce an off flavored milk. Notwithstanding this, it is more satisfactory to use corn in the silo, curing the clover and alfalfa and feeding it dry.—Hoard's Dairyman.

Value of Barnyard Manure.

The nitrogen in barnyard manure is easily worth 8 cents per pound. In the course of twelve months a horse will produce fifteen tons of manure and litter, containing in round numbers 130 pounds of nitrogen, with a value of \$10.40. When this same basis of calculation is applied to each grown animal on the farm it is easy to know what the value of the winter's manure is if that manure be got on to the land in such way that this nitrogen, together with its other fertilizing elements, is saved.—Kansas Farmer.

Watch Your Sheep's Wool.

If the animal is in poor health the effect on the growth of the wool is similar to insufficient feed. Sheep often shed or slip their wool as a result of a feverish condition. Any severe illness extending over sufficient time to reduce the animal to flesh will almost invariably cause a weak place in the wool.—Farm Progress.

BEND DRUGGIST

DESERVES PRAISE.
The Patterson Drug Co. deserves praise from Bend people for introducing here the simple buckthorn bark and glycerine mixture, known as Adler-ika. This simple German remedy first became famous by curing appendicitis and it has now been discovered that A SINGLE DOSE relieves sour stomach, gas on the stomach and constipation INSTANTLY. (Advertisement.)

You will have no irritated face if you have your shaving done at Innes & Davidson's barber shop.—Adv.

NOTICE FOR PUBLICATION.

U. S. Land Office at The Dalles, Oregon, April 14th, 1913.

Stop the Loss====Fires are Unnecessary

Brick is absolutely fire proof in any ordinary conflagration. Brick Buildings never burn, although they are sometimes injured by falling timbers or combustible interior woodwork.

A brick building is absolutely fire proof if wire glass is used in the windows and if burned clay floors are used.

An interior fire in such a building is confined to the room in which it originates; no outside fire can attack it.

The proportion of burned clay in a building construction measures its fire proof qualities.

Burned clay is the only building material that has been through the fire before you get it, in such a manner that it will resist fire. All combustible material is burned out or the brick before you get it.

WHEN YOU BUILD USE BRICK.
