Stop the Loss===Fires are Unnecessary

Brick is absolutely fire proof in any ordinary conflagration. Brick Buildings never burn, although they are sometimes injured by falling timbers or combustible interior woodwork.

A brick building is absolutely fire proof if wire glass is used in the windows and if burned clay floors are used.

An interior fire in such a building is confined to the room in which it originates; no outside fire can attack it.

The proportion of burned clay in a building construction measures its fire proof qualities.

Burned clay is the only building material that has been through the fire before you get it, in such a manner that it will resist fire. All combustible material is burned out of the brick before you get it.

WHEN YOU BUILD USE BRICK.
