

IT DOESN'T TAKE MUCH

Tonic to keep a horse well these hot days if you have the right remedy on hand at the right time. Keep a package of the Dr. HESS' STOCK FOOD on the shelf. It costs only a little and may mean the life of some of your valuable stock. A well horse can do a lot more than one that is under the weather.

Lee's Lice Killer will give the chickens that comfortable feeling, and more time to lay eggs.

LAVA ISLAND OPEN TO PUBLIC AGAIN

New Road Is Located and Put in Shape So Autoists May Reach Popular Camping Spot.

(From Tuesday's Daily.)
Lava Island, once a favorite camping spot, which has been closed to the public this spring and summer by the blocking of the road leading through Brooks-Scanlon timber which was being logged off, is open once more, by the locating of a new road, Judge H. C. Ellis reported today.
The new road has been labelled by Judge Ellis, but those unacquainted with the section wishing to make the trip are directed to start out on the state highway which leads from Bend to La Pine, and after the first railroad crossing out of Bend, to take the first road to the right.
The road has been put in good shape for autoists, Judge Ellis states.

Making Wire.
Wire used to be made by hammering metal into sheets and cutting these into strips, which were hammered or filed into wire. Now the material is rolled into rods by grooved rollers and drawn cold through holes in a plate of harder metal, usually hardened steel, by means of powerful machinery.

Certainly Not.
Mr. Liberty—I'm going to get you a piano, dear.
Mrs. Liberty—Oh, yes, you say you are, but your gifts always have strings to them.
"Well, you wouldn't want a piano without strings, would you?"—St. Louis Post-Dispatch.

In After Years.

NEW MIRACLES OF STEEL.

What the Laboratory Has Done For the Automobile Maker.

Writers of historical fiction perpetuate the notion that the art of the old armorer has perished. And yet in cars sold for only a few hundred dollars axles and crank shafts are to be found infinitely superior in texture to the weapons of famous swordsmiths.
The tales of supple yet tough blades that could be bent into circles without snapping are eclipsed in the less artfully phrased reports of tests conducted with crank shaft steel in the metallurgical laboratory of any large automobile factory.
Could the old swords be twisted through six complete turns before they broke? An axle shaft can be so twisted. What was the tensile strength of the mace that Geoffrey of Bouillon or Richard of the Lion Heart wielded? How far, in other words, could it have been stretched lengthwise before it parted? No one knows.
But the automobile metallurgist is sure that it was not the equal in that respect of a modern valve stem—a slim little member that can be extended half its length in a testing machine before it snaps in two.
As soon as the metallurgist discovered that the properties of steel could be subtly changed by the addition of very small quantities of such elements as chromium, carbon, manganese, nickel, tungsten or vanadium—as soon, in other words, as the problem of making the automobile durable and safe had been solved by research—the designer ventured to consider the economics of motoring. Heavy automobiles endure, but they consume much fuel, and they wear out expensive tires very rapidly. Light automobiles are more cheaply maintained. And so new demands were made on the laboratory in the effort to save weight without sacrificing strength or safety.
Is a gear required with teeth on the outside as hard as tool steel and yet with a core that shall be soft and tough, a gear that shall not weigh more than a given number of ounces? The metallurgist is asked not only to discover the formula for a steel out of which a part can be made and which must be examined with the microscope to detect the wear to which it has been subjected after having run 10,000 miles, but also to indicate the methods that must be followed by the furnace men in heat treating the metal.
Without the laboratory the designer would be helpless. There would be little progress from year to year.—Waldemar Kaempfert in Harper's Magazine.

FLAG IS STOLEN AT REID SCHOOL

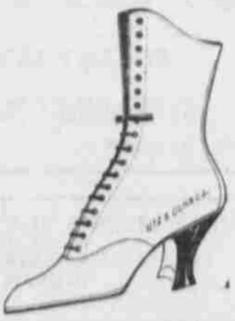

WINDOW FOUND FORCED, AND NEW AMERICAN NATIONAL EMBLEM TAKEN—THEFT IS THE SECOND THIS YEAR.

(From Monday's Daily.)
The second theft of an American flag in Bend was reported this morning when George Curry, janitor at the Reid school, informed City Superintendent Thordarson that a new banner, 19 by 15 feet, had been taken from the building some time between Saturday night and Monday morning. The flag was stored in the school during vacation, but the thief forced a window on the ground floor and secured it. No clues as to the identity of the individual have been found.
Early in the spring a flag was cut down from the standard in front of the Brooks-Scanlon Lumber Co. office. It was found weeks afterward, rolled up and stuffed under a sidewalk in the heart of the city.

ALLEGED PRO-GERMAN IS GIVEN FREEDOM

(From Thursday's Daily.)
On instructions received from the office of United States District Attorney Reames, of Portland, Conrad Kattelman, of Redmond, after being held four days charged with improper criticism of the American foreign policy, was released last night from the Bend jail, and returned to his home.
Before leaving, he declared that he had learned his lesson and would never talk in public again on any subject.

"Clearing the Plate."
Some gray headed men who grew up in New England remember the custom that prevailed in many families of making a boy or girl "clear the plate" or eat what was left at another meal before getting anything else. That was not irrational or cruel. The child was permitted to help himself or herself. If too much was taken the discipline of having to eat it sooner or later was wholesomely educative. We may get back to it. Waste is never justified in prosperous families or other families. It is a big element in giving children an utterly false idea of what makes prosperity, at least in blinding youngsters to the vitalism of thrift on which all accumulation is based.—Brooklyn Eagle.
