

WILL EXHIBIT AT STATE FAIR

CLUB WORK IN COUNTY GOOD.

Head of Industrial Club Work in the State to Have Exhibit Made Up from This County for the State Fair.

(From Saturday's Daily) Industrial club work in Deschutes county has been progressing even beyond the expectations of those in charge of the work, according to J. Alton Thompson and A. I. O'Reilly, who have been out through the county for the past three days checking up on the work which has been done by the members of the club.

So successful has been the work of the youngsters that an exhibit from Deschutes county for the state fair at Salem this fall is now assured. While all the branches of the organization in the county have not yet been visited, Mr. O'Reilly, who is at the head of the industrial club work for the Oregon Agricultural college, has seen sufficient already to warrant a good display for the fair. He stated this morning that he had been agreeably surprised at the progress which had been made and the interest shown by the children in their work.

One of the most important developments in his tour of inspection has been the discovery of a Cottswold lamb, grown by one of the members, which has exceptional merit. While both Mr. O'Reilly and Mr. Thompson refused to disclose the name of the grower, Mr. O'Reilly has made the statement that this animal will measure up to a higher percentage than any sheep in the college herd, a wide declaration considering the grade of sheep produced by the agricultural college.

The work of inspection has not yet been completed, but will cover several days, the party leaving for Terrebonne Monday, and from there to spend several days in that section looking over the work of the various clubs.

WOULD MAKE ALL PAY ON INCOME TAX LAW

(By United Press to The Bend Bulletin.) WASHINGTON, Aug. 21.—The new revenue bill will authorize a billion dollar drive on income and excess profit tax slackers to prevent future tax dodging. McAdoo has asked congress for authority to force every person in the country to make an income tax return. Internal Revenue Collector Roper, in addressing the ways and means committee of the house, has revealed these two moves.

Its Kind. "They say that at marriages in the future there will be a strictly American wedding march." "I suppose it will be something on the order of a two-step."

Paradoxical. Squabs—What made poor Griggby so light headed? Squibs—Well, there are differences of opinion, but he attributes it to heavy thinking.

REAL GAS USED AT UNIVERSITY

MEN AT OFFICERS' TRAINING CAMP ARE COMPELLED TO GO THROUGH GAS CHAMBER—LOCAL MEN GET APPOINTMENTS.

(From Wednesday's Daily.) That the Bend men who are attending the officers' training camp at Eugene are getting a real touch of war life and war training is the opinion of J. C. Rhodes, who, in company with Mrs. Rhodes and several other Bend people, spent Sunday and part of Monday at Eugene watching the work of the boys there. The party arrived in Eugene on Saturday night and spent Sunday visiting with the boy. There was no military activity on this day, and only the trenches could be visited. On Monday morning, however, they had the opportunity of seeing the men in actual training, part of which included passing through the gas chamber. For this part of the training a portion of the trenches are set off and impregnated with chlorine gas, used to extensively by the Germans in their offensives. Through this loaded trench the men in training are compelled to pass, with their gas masks adjusted. The real chlorine gas, and no substitute, is used, Mr. Rhodes stating that a man inhaling it will live only six seconds.

The men from Bend have made a showing for themselves at this camp. Roy Anderson has received an appointment to the field artillery training camp at Camp Zachary Taylor, and will leave for training there as soon as he has completed his work at this camp. It is expected that he will return to Bend and straighten up his affairs here before leaving.

M. H. Horton of the Horton Drug company has received his appointment as first sergeant at the university camp. The other members of the party who went from here, including T. H. Foley, Ashley Forrest and W. G. Manning, are all interested in the work and making a good showing.

KISS REVIVES HIS COURAGE

OPERATION IS PERFORMED IN FRONT LINE TRENCH DRESSING STATION WITHOUT ANAESTHETIC—NURSE KISSES HIM.

THE DALLES, Aug. 21.—The wounded American was brought into the French dressing station in the Vosges. An immediate operation was imperative. Through unforeseen circumstances there was no anaesthetic. Then a dainty little French nurse caught the situation. She must aid her American friend.

She bent over and kissed the wounded man, placed her cheek against his dirty, bearded one and with her arm supported him. The man smiled gratefully. The operation was performed with good results, although it was a serious one. The American's courage had

been revived to bear the pain. This incident was related by Sergeant Jerry Gerrard of The Dalles in a letter home. Jerry claimed to be the first The Dalles man and possibly the first Oregonian to set foot on German soil in this war. His unit crossed the border recently.

INSECT PRODUCTS OF VALUE

Many Small Creatures Make Contributions to the Country's Wealth of No Insignificant Amount.

We have many insect products of no small value. Most familiar are honey and wax from the bee.

There is also a Chinese bug which secretes a kind of grease on various trees. This hardens into wax, and is collected, melted and purified, when it becomes white and glossy in appearance, and when mixed with oil can be made into candles. The cochineal, a scale insect living on cacti in the American tropics, besides having medicinal qualities, yields the two dyes called carmine and lake. While nowadays most dyes are chemically made, the natural dye of the cochineal is employed in coloring soldiers' uniforms, as it stands the weather better than commercial dyes. The pupae of a Mexican black fly which swarms in great quantities near Lake Texcoco are used as fertilizer. No enlargement is needed on the work of the precious silkworm—a native of China which is now raised here also. Commercial shellac is obtained by melting lac, the resinous substance produced by an East Indian scale insect and deposited in a crust on twigs to contain the insect and its eggs. The export value of lac from Indian ports in one year has risen as high as 33,000,000 rupees. Lac has also been used to make dyes, but while the lac industry is a growing one, the employment of lac in making dyes has probably had its day. The best lac is obtained from Bengal and the central province of India. It is also used as stiffening for hats, sealing wax, as an ingredient of lithographic ink, in electrical work and in the manufacture of gramophone records.

BRITISH COLUMBIA'S COAL

Writing of the discovery of coal in British Columbia, Johnson in his "First Things in Canada," states: "One day in December, 1849, an officer of the Hudson's Bay company in Fort Victoria was informed by the foreman of the blacksmith's shop that an old Nanaimo Indian chief had just stated that he knew where there was 'stuff' like that which the white man was using in the blacksmith's fire. The Indian was told that if he would bring some pieces of the 'stuff' he would have his gun repaired free and receive a bottle of rum. The chief reappeared in the following April (1850) with his canoe laden with coal. A prospecting party went out and found the coal where the city of Nanaimo now stands. In 1874 the production of coal from the Nanaimo mines amounted to 1,000 tons; in 1896 it exceeded 1,000,000 tons.

SPRING FESTIVAL IN CHINA

Beginning of the Year is a Time of Rejoicing Throughout the Whole Country.

In the United States one knows that spring has come when he sees boys playing marbles and flying kites. In China, says the Christian Science Monitor, there are regular spring-playing festivals that all the people have a part in and which are especially interesting for children.

Just when the spring festival comes depends on the moon. It is the beginning of the year in China, and in the first moon the magistrates and other important persons in the town go out in a procession "to meet the spring."

It is at the lantern festival, the 15th of the first month, that the children have the best time. Brightly colored lanterns are everywhere, at the doors of shops and houses, and carried in processions. Boughs of evergreen are also placed above the doors, and there is an abundance of "moon cakes," little round sweet rice cakes.

The boys dress up in all sorts of fantastic clothes, sing, dance and give little plays. They wear masks of animals and of human faces. Companies of them go about through the streets of their villages, and from one village to another. Now and then a group of maskers will be seen on high stilts. There is a very pretty dance where every dancer carries a lighted lantern. This is called the lantern dance.

Fifteen Years Ago This Week

Tuesday was the hottest and most uncomfortable day in Bend this year. The government thermometer registered 95, and it was hot from early in the morning until late at night.

John Elder returned to Bend on Tuesday from Pockegama, California. He left ten days before with a party of timber locators and sightseers and drove them all the way to the new terminus of the Southern Pacific, a little farther in fact—covering a distance of more than 500 miles.

John C. Conn's freight team passed through Bend yesterday on the way to the railroad terminus at Shaniko with 20,000 pounds of Central Oregon wool. The round trip occupies 28 days and the sturdy mules now have work enough ahead of them to last until New Years.

The new mill of the P. B. D. company has been running at intervals this week, getting the machinery limbered up and in condition for regular work. A number of thousand feet of lumber has been sawed in this process.

C. S. Benson barely escaped being crushed by a large rock while at work on the flume line Tuesday. Mr. Weist was working at a log at the top of the bluff and it became suddenly dislodged, thus removing what proved to be a support to a rock that was supposed to be attached to the main ledge. Benson's attention was attracted barely in time for him to leap out of the path of the flying rock, which crashed through an 18-inch tree as though it was a mere sliver.

BRITISH COLUMBIA'S COAL

Writing of the discovery of coal in British Columbia, Johnson in his "First Things in Canada," states: "One day in December, 1849, an officer of the Hudson's Bay company in Fort Victoria was informed by the foreman of the blacksmith's shop that an old Nanaimo Indian chief had just stated that he knew where there was 'stuff' like that which the white man was using in the blacksmith's fire. EXPERT WOULD REDUCE TAXES

(Continued From Page 1.)

draws a salary, and a secretary of the livestock sanitary board. At least two more salaries would be here contemplated. And so on down the line. It simmers down to a proposition of adding a bunch of directors, and under these being deputies who would correspond to the heads of the various departments now in existence. But, as before stated, no mention is made of the extra salaries to be drawn by these extra hired helpers.

Possibly One Good Feature.

One theory of the report is generally accepted around here as being good. That is the story of so departmentizing state government that in the future, no matter what legislation is enacted, administration of such legislation can be turned over to the proper state department without the creation of new boards and commissions. One or two citizens with more than the ordinary temerity have ventured to suggest that perhaps this desired end could be attained by a less expensive means than that contemplated in the camouflaged report of the government efficiency expert, but they have been promptly hooted down in derision.

THE BUGLE CALL

Summons all the forces and resources of the Republic to the defense of Freedom

THE OREGON AGRICULTURAL COLLEGE which the United States authorities have ranked as one of the fifteen distinguished institutions of the country for excellence in military training, has responded to the call. The College is distinguished not only for its military instruction, but

DISTINGUISHED ALSO FOR—
Its strong industrial courses for men and for women: In Agriculture, Commerce, Engineering, Forestry, Home Economics, Mining, Pharmacy, and Vocational Education.

Its wholesome, purposeful student life. Its democratic college spirit. Its successful graduates.

Students enrolled last year, 3,453; stars on its service flags, 1259, over forty percent representing officers.

College opens September 23, 1918

and consequently have duly retired to the silence of their chambers, squelched—but not mollified.

Not long ago the remark was made in these columns that when the legislature was led up to the consolidation commission's trough it would take one whiff and turn away. Since the issuance of the aforementioned report there are indications that there will be difficulties encountered in even getting it up to the trough.

Something About "Big Men."

Reverting for a moment to the theory of the "bigger men" gives rise to a recollection of several years' standing. When the public service commission was in the process of creation there was considerable talk about the salaries to be paid to the commissioners. A number of people thought \$3,000 a year was sufficient, but a larger number declared that a higher price should be paid to get good men. The higher price of \$4,000 was hit upon, and the governor straightway appointed Oswald West, Clyde Aitchison and Tom Campbell. Now there is no disparagement meant of the commission as all of these men unquestionably served the commission ably, and Aitchison is now receiving \$16,000 a year as a member of the interstate

commerce commission. But the parallel is found in the fact that when he received the appointment West was on the state payroll at \$1,800 a year, Aitchison was drawing about as much, or less, while Tom Campbell was getting nothing at all, as far as is known. Of course all three of them were glad to land the \$4,000, but considering the salaries they were getting at the time it is just as reasonable to suppose they would have accepted the \$3,000 as the \$4,000. All of which is a good example of the better-men-at-a-higher-salary proposition.

The state tax commission still is wrestling with the problem of how much extra money will be needed to conduct the affairs of the state government and how much it will need to ask the people for at the general election in November. In a general way it might be said that the estimates of the various state activities as filed with the commission and showing the cost of government for the next biennium as seen by the eyes of the heads of departments, show a total of about \$10,000,000. This is about \$3,000,000 more than the total appropriations for the present biennium and is probably a million or two more than the people will be ready to award to the busy little estimators.

The commission, when it saw the stupendous array of figures, put further consideration of it over until Friday of this week, when it is thought likely some definite conclusion will be arrived at.

Lewis May Yet Resign.

Whether or not State Engineer Lewis will resign is still hanging fire and is dependent upon what is done by the capital issues committee as to allowing the sale of bonds for the Warm Springs project, the project for which Mr. Lewis will perform his labors if the bonds are sold. From hints dropped by Mr. Lewis it may be that he will still resign, even if the Warm Springs matter does not materialize, as there is just now a big demand for competent engineers and it is understood a number of people have been angling for him. Consequently he may get a much more enticing offer than the prospect held out for him by the state, regardless of the fact that Governor Withycombe has signified his intention of reappointing him if he does not resign.

CARD OF THANKS.

Mr. and Mrs. J. M. Perry with to extend their thanks to their friends of Bend and Terrebonne for the kindness and sympathy shown them at the time of their recent bereavement.
