- The World at a Glance -

How to reduce the cost of living which has steadily mounted since the beginning of the European war is the problem over which congress has been fretting for the past week, and on their efforts in this direction has been focused the attention of the people of the United States. As a part of the cost reduction program outlined by President Wilson, the department of justice is gathering evidence against food hoarders and profiteers, while the war department is coming to the rescue by selling carloads of surplus army food supplies for distribution through the various municipalities throughout the country.

Already a slight drop in price of many commodities has been noted, but no constructive legislation has as yet been enacted. At the same time, however, recognition of the farming interests was made on Tuesday, when the senate agricultural committee asked for a change in the standard of grain grading, claiming that heat-withered grains, under the present rating would sell at only \$1.50 per bushel, although it would be used by millers in the manufacture of the highest grade of flour.

Nationalization Move Halted.
What earlier had been a question of supreme national interest, namely the movement of the railroad brotherhoods for the nationalization of railways, under the joint control of the federal government and labor has been held at a standstill while price legislation has been under consideration. The program of the brotherhoods was officially endorsed yesterday, in a statement issued by Samuel Gompers, president of the American Federation of Labor.

Hungary Feels Reaction.

Carrying out the policy of the naval department for the protection of the western coast of America, the Pacific fleet arrived off the coast of California and was reviewed by Secretary of the Navy Josephus Daniels. Indications of the falling strength of the Bolsheviks in Europe were given in the reaction after the overthrow of Bela Kun's regime in Hungary, when Archduke Joseph resumed leadership of the new government. The advance of the Rumanian army was continued, however, until warning was given that economic assistance on the part of the United States would be withheld if the invaders did not withdraw. The Rumanians have also been ordered to restore large quantities of supplies taken during the invasion, and have returned conciliatory replies, it is announced.

One of the greatest figures in the world of modern business retired from the stage of human action Monday, when Andrew Carnegie, multimillionaire steel man, organizer of the first great American trust, and giver of \$300,000,000 for charity education, died. His funeral was to be held today.

Intimation of a renewed activity in bringing about the final settlement of the world war, was given yesterday when Senator Hancock, administration leader in the upper house in congress, threatened that if the peace treaty were not speedily reported out of committee the pact would be taken up directly with the senate. The threat resulted in action, and the committee was scheduled to begin today consideration of proposed amendments to the treaty.

BETTER PRICES FOR BALED HAY

SAVING SEEN IN USE
OF PRESSER.

Higher Grading Given to Hay Put
Up in Neat, Compact Bales—
Advice Given About Use of
Proper Machinery.

Saving hay is more difficult than making hay.

Hay is graded according to the way in which it is baled. Bales of uniform size and of neat, attractive appearance bring top prices, other considerations being equal, while ragged, unsightly bales are penalized. In baling hay for market, various practices are in operation; some are followed unconsciously or in order to avoid extra work, while others are followed deliberately with intent to deceive the buyer, which tend to lower the market value of hay in the bale, irrespective of its actual quality.

The perpetual press, which is the most popular type in all sections where hay is grown for market, features continuous pressing—that is, hay is fed into the press, a forkful at a time, and the finished bale is discharged from the opposite end of the bale chamber without stopping the press. If the hay is properly fed into the press it will be easy to separate the bale into as many portions for feeding as there are number of charges in the bale, which varies from 6 or 8 to 15 or 20. The first box presses were operated by hand, but now they are run by horsepower or by engines.

We Are Ready for You in Our Shoe Department

NEVER were we in better shape to take care of the whole family than we are this fall. You have heard so much lately about shoe prices that lots of people are led to believe they are going to have to pay enormous prices for shoes this fall. Well, we admit that prices are up some on shoes, but we

have a pleasant surprise for you when you visit our Shoe Department. Our enormous buying power enabled us to secure values that cannot be equalled elsewhere. WE DEFY ALL MAIL ORDER COMPETITION.

CHILDREN'S SHOES

Infants' Soft Soles.....25c to 98c
Children's Shoes, 1 to 5 \$1.19 to \$1.98
Children's Shoes, 5½ to 8.....\$1.35 to \$2.98

EXPECT WORD SOON ON DIAMOND DRILLS

Whether or not diamond drills will be used in determining the water holding properties of the Benham falls reservoir site, will probably be determined by the later part of the week, it is expected by geologists who have been conducting investigations above Bend for the last two weeks.

Several drills were found to be available at Prineville and one of these was selected, but the necessary authorization from the reclamation service has not been received. The remainder of the week is to be spent by Professor W. O. Crosby, head of the party of geologists, and his son in a trip to Crater lake, and on their return it is thought that either the authorization or a definite refusal will have been sent.

Nothing but an incomplete report on the storage reservoir site can be submitted unless soundings with diamond drills are made, the geologists consider.

Testing Tea.

If you wish to test the purity of tea take a table knife and a sheet of white paper, upon which rub the tea with the knife. When the leaves are powdered the paper is dusted clean and its surface examined. If the tea is artificially colored, streaks of vivid Prussian blue will appear.

Green Beard of Sisters recently purchased a new threshing separator.

The box press always makes bales having the same or "oven" length. The two-horse, full-circle or continuous-travel, perpetual press is the type of horse press most extensively used. In operating this machine the horses travel in a circle. In buying a press of this type the purchaser should pay especial attention to the power mechanism, the material used for important parts of the press, size of the feed opening, plunger return device, self-feeding attachment, and convenience in tying the bales and in setting and moving the press.

The reversible-lever type of press is sometimes called the half-circle press, since the team travels half a circle, turns around and pulls the lever to the other side, a charge of hay being pressed for each half circle. This type is easily portable.

Large Growers Use Power.
Large hay growers and shippers who buy and bale large quantities of hay generally use power presses. They are sometimes used in preference to the two-horse type on alfalfa hay farms, even where the hay acreage is comparatively small, say from 50 to 75 acres, for the reason that they will bale hay about twice as fast as it could be done with a two-horse press, thereby greatly lessening the danger of injury to hay due to bad weather.

The advisability of buying a hay press depends upon the amount of hay to be baled yearly, the likelihood of being able to obtain a crew when needed, and the rate

Much Truth in Her Remark.
In a Western court a certain man was defending himself in a suit for divorce. "She's unreasonable," he contended, adding, "why the other day she called me the laziest man in the world because I threw a kiss at her."

Daily Thought.

As a vessel is known by the sound, whether it be cracked or not, so men are proved by their speeches, whether they be wise or foolish.—Demosthenes.
